The Government's intention with regard to the Chinese Indemnity is to sell the Bonds to the Deposit Bureau, in other words, to the Postal Savings Bank Bureau. Nominally the amount of the Indemnity, so far as Japan is concerned, is 50 million *yen*, but as 4 per cent. bonds of a face value of 100 are not worth more than 80 in the Japanese market, the Indemnity Bonds will be disposed of to the Bureau for 40 million *yen*, less 2 millions which has to be paid in satisfaction of private claims. It will immediately occur to the public to inquire how the Deposit Bureau can make any such purchase. The answer appears to be that the Bureau, though nominally buying the Bonds to the extent of 38 millions, will in reality receive them in payment of a debt already due to it by the Treasury. It was in the hands of the Bureau that the three Capital Funds were lodged, namely, the Naval Maintenance Fund of 30 million *yen* and the Education and Calamity-relief funds of 10 millions each. The two last Funds were in the form of interest bearing bonds, and were thus not immediately available for the purposes of the Chili campaign. Hence the Naval Maintenance Fund, which alone was in cash, had to be utilized. Twenty millions were taken from it and these have now to be restored. The Government's project is to make the restoration, not by a cash payment, but by handing over to the Bureau four-per-cent. Chinese Indemnity Bonds. In other words, two-thirds of the Naval Maintenance Fund will be converted from ready money into interest bearing securities. Moreover, the Bureau holds Japanese bonds to the extent of nearly 13 million *yen*, which the Treasury ought to redeem. In this case also the redemption will be effected by paying over the Chinese securities. Thus, in brief, what happens is that the Treasury applies the new Indemnity to discharge obligations aggregating 33 million *yen*, and the Bureau makes an actual purchase of 5 millions out of the total 38 millions. That transaction will give it no trouble: it can be effected by means of interest on investments, for the Bureau holds a total sum of 100 million *yen*.

On the other hand, the Treasury becomes richer on account of the Indemnity to the extent of 38 million *yen*. It will not receive more than 5 millions in cash from the Deposit Bureau, but it will be relieved of the necessity of making payments aggregating 33 millions. Further, it will collect, during the course of next fiscal year, 21 million *yen* as the proceeds of increased taxes. Thus, finally, it will have 26 millions to dispose of, and its present purpose is to appropriate that amount as follows:—About 8 millions to pay off a loan contracted on account of the Chili campaign and to meet further outlays of the same character during the present year, and 16 millions to defray expenditures in connexion with public undertakings which, in accordance with the *post-bellum* programme, ought to be met by the proceeds of a domestic loan."

From this statement it will be seen that the question about which the party politicians are agitating reduces itself to whether the Naval Maintenance Fund should be restored in the form of cash from the proceeds of taxation during the course of next fiscal year, or whether it may be restored now by means of interest-bearing Chinese bonds."

MR. CHAMBERLAIN AND GERMANY.

It would certainly be a pity if a man in Mr. Chamberlain's position should add fuel to international rancour by speeches such as he delivered at Edinburgh. But how much is he really to blame? Apparently the particular speech alluded to was made on October 26th, and the passage which has created so much excitement was this:—

"I think the time has come or is coming when measures of greater severity may be necessary, and if that time comes we can find precedents for anything we do in the actions of those nations who now criticise our barbarity and cruelty, but whose examples in Poland, in the Caucasus, in Algeria, in Tonquin, in Bosnia and in the Franco-German war we have never approached."

There is nothing very offensive in this; certainly nothing that could warrant an "outburst of Anglophobia" in Germany. But nations, like individuals, have their moments of vertigo, and Germany is passing through one of them at present. There is no accounting for it. It is a temporary access of mania. South Africa is not the cause. South Africa is only a peg on which the Germans hang one of the most curious examples of international hatred that has ever been witnessed. We hope always against hope that the unhappy mood is transient, and that the clouds will one day roll by, leaving the two nations to see each other in their true aspect. Sometimes, however, very often indeed, we fear that the Germans are carrying their display of rancour and animosity beyond all bounds of endurance, and that they will ultimately create a calamitous situation. But surely the proper rejoinder just now should be the soft answer that turneth away wrath. England does not reciprocate their bitter mood; not yet at any rate, though like begets like, and the most long-suffering of nations must ultimately lose its *sang-froid* when abuse and vituperation are incessantly poured on its head. The best way to strengthen our patience is to regard the vapouring of the German press as we should regard the utterances of a sufferer from hysteria, and to remember that when all is said and done the Germans have more numerous titles to our friendship and esteem than any people in the world after the Americans. Nothing could illustrate more forcibly the singular unreasonableness of their mood than their recent outburst. They have been deluging us perpetually for nearly two years with the most vehement slanders founded on calumnies of the grossest character, yet when we attempt to defend ourselves with legitimate weapons, they raise a vehement outcry as though they were the aggrieved party. Appeals to reason are quite futile under such circumstances. We must trust to the softening influence of time and to the good sense which the Germans undoubtedly possess, though it has been obscured for the moment. Meanwhile it can not be too much regretted that a man in Mr. Chamberlain's position should do anything, however slight, to fan the flame of English indignation. It is the plain duty of those in authority to set the nation an example of dignified forbearance. In this matter the Emperor of Germany shows his greatness. He has adopted the most prudent and tactful measures to mitigate the effects of his nationals' violence, and if Mr. Chamberlain could persuade himself to follow a similar course, he would deserve better of his country.

BRITISH TRADE.

The Times, writing on the subject of British commercial interests in Japan, says:—

Few countries in history have shown such a striking commercial advance as Japan has done during her comparatively short intercourse with other nations of the world. It speaks highly for the enterprise, skill, and industry of her people, and affords the most encouraging promise of continued prosperity in the future. A recent Consular report on the foreign trade and shipping from 1872 to 1900 gives with most commendable brevity, but clearly and succinctly, some very striking figures on the subject. It shows that the value of Japan's foreign trade grew from less than nine millions sterling in 1872 to nearly 23 millions in 1890, and to over 50 millions in 1900; that, while in 1872 Japan was a purchaser from abroad to the extent of only four-and-a-half millions sterling, in 1890 she took 13, and in 1900 29 million sterling, while her sales during the same period increased fully five-fold. As stated in the report, this rapidity of commercial advance shows a marked contrast to what has taken place in China, and it might well have been added that the comparative value of the present trade of the two empires, with their vastly different populations, affords very convincing evidence of the superior commercial enterprise of the Japanese people as a whole. Their advance in shipping is even more marked than in general trade. In 1883 the entries of vessels under the Japanese flag at all the ports open to foreign trade were so insignificant, both in numbers and tonnage, that they were not considered worthy of the slightest notice in the Consular report on the trade of Japan for that year. In 1900 they amounted to over 3,000 vessels of nearly three-and-a-half million tons, and the share of the Japanese in the total foreign carrying trade of 480 million yen was over 140 million yen. While in 1872 Japan possessed 96 merchant steamers of an aggregate tonnage of 23,364 tons, all of them vessels condemned by their original owners as unfit for further profitable service, ill-found, ill-managed, and never venturing beyond their own coasts, in 1900 her merchant fleet included 846 steamers of 528,321 tons, most of them vessels of the highest types of modern construction, thoroughly well found and managed, and successfully competing, both as freight and passenger carriers to all part of the world, with the best lines of British, German, and United States shipping. Some of the finest of these vessels have been built and completed in all details in Japan, shipbuilders having been encouraged by heavy bounties. Three steamers, each over 6,000 tons, have been built at Nagasaki for the mail service between Japan and England, and others of large size, for the special requirements of the Yangtze and the local trade of Japan and China, have been either completed or are far advanced at the same port. The sailing fleet has increased in even a greater ratio and is now largely composed of steel, iron, or composite vessels, while, aided by the shipbuilding bounties and by shipping subsidies of the most liberal nature, builders and owners enjoy a degree of prosperity which is a strong incentive to further exertions on the part of both.

On the other hand, while admitting that "this advance must be regarded with unalloyed feelings of satisfaction and admiration from the standpoint of our friendship to Japan," *The Times* does not find that England can be congratulated on her share in the trade. It goes on to say:—

The Consular report above quoted was written by Mr. Longford, who is one of our oldest and most experienced Consuls in Japan, and whose commercial reports, which have been frequently summarized and favourably commented on in *The Times*, have for several years been characterized by thought and research and deservedly occupied a foremost place among those from His Majesty's Consuls in all parts of the world. What he writes is deserving of all attention, and the object of the present report has evidently been to show that Great Britain has not shared in the commercial advance of Japan *pro rata* with other countries. In 1883 the value of the total import trade of Japan was 5½ millions sterling; in 1890, 13 millions; and in 1900, 29 millions. But while, in the former year, the first in which countries of origin were discriminated in the Japanese Customs returns, considerably over half the total imports were of goods of British production, the ratio had fallen to less than one-third in 1890, and to less than one-fourth in 1900. In 1883 German imports were of the insignificant value of £283,000, and those from the United States, consisting entirely of such products as kerosene oil, flour, tobacco, and other articles in which Great Britain as a seller takes no interest, £637,000. In 1890 German imports had increased fourfold, advancing from the position of

one-twentieth to one-tenth of the whole, and those of the United States nearly doubled; and in 1900 both, as compared with 1883, had increased over tenfold. In the same year British imports (excluding Indian and colonial) had grown also, as compared with 1883, less than two-and-a-half fold. As carriers to and from Japan our position is more satisfactory, but, while in 1883 over 42 per cent. of all merchant shipping entered at the open ports was under the British flag, the ratio in 1900 was less than 39 per cent., though British tonnage had increased fivefold. German tonnage, in the same period, increased more than twelffold, and advanced from the position of one-nineteenth to that of one-ninth of the whole. Nurtured in the same way as the Japanese, by heavy subsidies, German shipping is, Mr. Longford states, showing marked advances, and the speedy establishment of new subsidized lines, with steamers of the largest freight-carrying capacity, under the United States flag, to be run in conjunction with the trans-continental railways, seems to threaten our large carrying trade across the Pacific.

Reasons are mentioned by Mr. Longford to explain the success of German and United States traders in competition with our own in goods, the supply of which was, not many years back, looked upon as the exclusive prerogative of British manufacturers. Willingness to cater specially for the requirements of the Japanese, advertising, energy and vigilance on the part of commercial agents are old and hackneyed and have formed the basis of comment from Consuls in all parts of the world for years past, but another is now given, which comes with peculiar appropriateness at a time when a special committee of the House of Commons is sitting to inquire into the question of steamship subsidies in all parts of the world. German and United States manufacturers not only enjoy the benefits of cheap freights by subsidized steamship lines, but are able to send their goods by rail at preferential rates to the port of shipment and thence by steamer on through bills of lading at inclusive charges. In Great Britain the case is in all respects the reverse. Nothing is done to make easy the way of the manufacturer or merchant. There is no subsidized line of steamers from England to Japan. Goods have to be conveyed by rail at heavy rates from the seat of manufacture to the port of shipment, shippers to incur all the cost and risk of transfer from rail to steamer, and then finally to pay a higher rate or freight by unsubsidized steamers to the destination in Japan than their rivals at Continental ports. These are serious obstacles to the continued development of our trade, now that an opposition formerly undreamt of in its keenness and efficiency has to be encountered in every line of business, and their remedy is worthy of the most serious consideration both on the part of the Government and of the mercantile community. More attention might well be given to Japanese matters, not only by the Government but also by Chambers of Commerce at the principal manufacturing seats in Great Britain.

It is now just sixteen years, if we remember rightly, since Mr. Longford began to write upon this important subject. The line he took then was that England's competitors were distancing her in the matter of commercial enterprise and versatility. They were taking more pains to ascertain the exact wants of their customers, and to supply them with goods suited to those wants. Therefore Mr. Longford suggested that some means be adopted for establishing closer touch with Japanese consumers, to which end he recommended visits to Japan by agents of British manufacturers. The document attracted a great deal of attention at the time. It had been remarked previously that Mr. Longford possessed the knack of making even consular trade reports interesting, and here, in truth, was confirmation of that appreciation. But the average British merchant showed annoyance only. He knew his own business, he supposed, without being taught by youthful Consuls, and so long as he was content with the course commerce was taking, no outsider need trouble himself. Time, however, with its unchanging habit of always making truth victorious, has amply vindicated Mr. Longford. Whether he was right as to Japan in particular, we do not venture to assert, since we address men much better qualified than ourselves to express an opinion; but as to the

general fact that Great Britain's rivals are getting ahead of her by more intelligent enterprise and closer attention to opportunities, there can no longer be any doubt. A very remarkable letter from a New Zealand resident appears in the journal from which we have quoted above. The writer, Mr. Howes, asserts that Great Britain is fast losing her hold on the colonial markets for manufactured goods, and that the time seems to be not far distant when all such goods imported into New Zealand "will come from anywhere but England." He gives chapter and verse for his views. "In machinery of all descriptions, in fact, in all classes of metal work, from a gridiron to our heaviest locomotives, England is far outranked by America," the reason being that the price of the British article is greatly enhanced by useless finish. Yet, even "in highly finished and intricate machines, the American is still further ahead than the Britisher. For instance, the Baldwin locomotive can be put straight on a long run, not requiring the breaking in that the English-made machines do." In farm implements the superiority of America is said to be equally pronounced, and in boots and shoes she supplies articles quite as good as the English at half the cost. In soft goods—dress materials and underwear of all descriptions—the Germans are establishing a strong lead, and in calicoes the American marks are rapidly overhauling the standard English ones." The conclusion reached by Mr. Howes is that these things are due "to the lack of commercial enterprise on the part of the English manufacturer, who is apparently of too conservative a nature to adopt his mode of production to the exigencies of our trade," and who, not keeping sufficiently in touch with the market to know what his rivals are doing, speedily "gets left." That is exactly what Mr. Longford said in 1885, and his recommendation was that British manufacturers should send out agents to feel the wants of the Japanese by actual contact, whereas Mr. Howes advises that "two or three men of thorough commercial experience should be engaged in the colony to come home and place the requirements of the colonial trade before the manufacturers." Certainly if the British merchant awakes from the supineness begotten of long but no longer existing superiority, he may recover his old place.

GENERAL BULLER'S SPEECH.

Men holding positions of authority in Great Britain do not deliver speeches of the semi-hysterical and wholly undignified, character of Sir Redvers Buller's harangue at the Westminsters' luncheon. Of course there is much in the speech with which Englishmen will sympathise. It will be admitted that great injustice has often been done to British officers by newspaper comments, and that a man in General Buller's position may justly resent the glib criticisms of irresponsible and usually half-informed scribblers. But there are becoming ways of showing resentment and there are unbecoming ways, and the way chosen by Sir Redvers Buller was a way of which no sober-minded Englishman can approve. What the public will ask, however, is which particular part of the excited General's speech was specially responsible for his supercession. The whole display was in bad taste, but, at the same time, there rang through it a note of manly frankness which would have gone far to redeem it had it not embodied a directly

reprehensible passage. That passage, it seems to us, was this:—

But the Editor said one thing for which I thank him—he accused me of reckless courage. Reckless courage is a quality I should like to possess, but, unfortunately, I have never been gifted with it all my life. If ever I displayed reckless courage in my life, I assert, and possibly some day I may prove, that I displayed reckless courage in having in my pocket the very telegram that he talked about, in which I was ordered to do something which would have involved the loss of 2,000 or 3,000 men. I withdrew the men because I thought they could not get through, and I would not lose a man unless I thought I could get something for it—(cheers).

After that either Lord Roberts had to cease to be Commander-in-Chief or General Buller had to be retired. There was no other way out of the mess. General Buller, in the words we have quoted, plainly impugns the propriety of Lord Roberts' order, and distinctly declares that he had the "reckless courage" to disobey it, since, with the Commander-in-Chief's telegram in his pocket requiring him to make a heavy sacrifice for the sake of Ladysmith, he deliberately withdrew his men. He may have been perfectly right in withdrawing them. When Lord Roberts forbade the officer commanding in Natal to be deterred by risks from which that officer showed a disposition to shrink, he did not at the same time tell him to waste men's lives fruitlessly. General Buller was of course left to exercise his own discretion as to the manner of making attacks or the degree of tenacity adopted in pushing them home. But he was not told to lose men without getting anything for it. Yet his speech distinctly implied that had he obeyed Lord Roberts' telegram, many lives would have been fruitlessly sacrificed, and that by disobeying the telegram he avoided the sacrifice. His words do not admit of any other interpretation, and after such a proclamation he certainly could not continue to serve under Lord Roberts.

TOKYO LAWN TENNIS CLUB.

On the 23rd instant the members of the Tokyo Lawn Tennis Club held a general meeting, His Excellency Sir Claude MacDonald, President of the Club, being in the chair. There was a good attendance, including their Excellencies the Ministers of France, Spain, Holland and Belgium. It was agreed that Marquis Nabeshima should be invited to be Vice-President, and a committee of eleven was appointed—including two secretaries and a treasurer—with power to draw up rules and to take all steps necessary for placing the Club on a working basis. The meeting further decided to abolish the restriction hitherto in force, namely, that only members of the Tokyo Club should be eligible for admission. It was unanimously resolved, upon the motion of His Excellency Baron d'Anethan, that all residents of Tokyo and Yokohama should be eligible on condition of being elected by the committee. The courts—3 grass and 3 gravel—having now been completed, it only remains to carry out some further measures of preparation and construction before commencing play. There are to be two ladies' days weekly, and it is hoped that the Club will thus prove the means of re-inaugurating the pleasant gatherings of residents which used to be one of the social features of Tokyo. The unanimous feeling is that very much is due to Baron d'Anethan in connection with the reorganization of the Club, the enthusiasm with which he succeeded in infusing the projectors and the practical character of his suggestions having contributed materially to the success thus far achieved.

THE ANGLO-GERMAN AGREEMENT.

The *Berliner Neueste Nachrichten* makes the following comment on the foreign policy of Germany under the control of Count von Bülow:—

"In foreign policy Count von Bülow had only to continue the work he had begun as Secretary of State. The main object in this sphere is to preserve peace and good relations with all Powers; in particular to maintain the Triple Alliance, and along with it good relations with Russia, a Power connected with us by many interests and involved by none in fundamental opposition to Germany. Both these tasks have been performed with great success by the Chancellor, and the Danzig meeting, with the incidents which followed it, warrants the belief that the relations of Germany with Russia are again as intimate as they well can be in the circumstances. . . . In China the army and the navy earned respect; but, apart from their achievements, the Yany-tze Convention has every claim to be contemplated with great satisfaction by the nation. The day will come when the Yangtze Convention will be regarded as more than an eminent diplomatic success. Its historical significance is the more remarkable in that it secures for Germany's commerce and industry, and consequently for her political influence in those regions, a place in the sun on a footing of equality with England. The German garrison at Shanghai is a permanent symbol of the achievement, and although at present there are only a few people who realize how greatly that convention has multiplied and strengthened the interests which connect Germany with East Asia; this fact will one day be recognized by the whole nation."

There is a fine old rule which every man of business appreciates and observes, namely, that no bargain which is absolutely one-sided can be lasting, to say nothing of fairness. The Germans, as represented by the paper quoted above, assert that what they are now pleased to call "the Yangtze Convention" secures for Germany in the Yangtze Valley political influence equal to that enjoyed by England there. What, then, does Germany give in return? Does she concede to British commerce and industry equality of privileges within the German sphere of influence in Shantung? By no means. According to Germany's contention Shantung is a reservation where her rights, and her rights alone, are recognisable. Does it pledge Germany to assist England in securing respect for China's territorial integrity? By no means, since Chinese territory ceases to have any existence in German eyes so soon as a Power which she wishes to placate desires to annex any part of it. What then does Germany give in return for a concession which "has multiplied and strengthened the interests which connect her with East Asia" to an extent, which "only a few people have yet realized" but which "will one day be recognised by the whole German nation?" She gives nothing; absolutely nothing. Now is there, can there possibly be, a solitary German subject who in his heart of hearts believes that England was a witting party to such a one-sided compact? Does not every German know perfectly well that the Convention was never concluded by England with any such intention, and that even supposing its text to admit of any such construction—which we totally deny—to read it in that sense is mere trickery? Diplomacy is a very wonderful science. Among its list of implements are included some which happily do not find any place in the armoury of honourable private intercourse. From the point of view of the *Berliner Neueste Nachrichten* the Anglo-German Agreement may indeed be an "eminent diplomatic success," but from the point of view of international integrity it will not for one instant bear the construction put upon it by some German publicists, nor does the presence of a German garrison in

Shanghai constitute any proof whatever of Germany's newly claimed rights.

It seems to be forgotten, also, by journals like our Berlin contemporary, that other Powers were invited to adhere to the Agreement, and that the intention of inviting them was a part of the programme from the outset. Have those Powers also acquired a multiplication and a strengthening of their interests in East Asia? If they have not, if the formality of asking them to be parties to the Agreement signified merely that they were to act the role of witnesses to a compact by which Germany was to score an eminent diplomatic success and England was to get nothing at all, then indeed these Powers may claim that they were deluded into becoming unwilling parties to an international deception such as has seldom been practised in the history of the world.

There is another point to be noted. The Berlin journal alleges, with unconcealed exultation, that the Agreement "secures for German commerce and industry a place in the sun on a footing of equality with England." Was any solemn convention necessary to secure to German subjects exactly the same rights and privileges as those enjoyed by British subjects in every region where the British flag flies? Had not British generosity already placed German subjects in full and free possession of those rights and privileges, and had they not enjoyed them continuously from time immemorial to their own no small profit and prosperity? No international agreement was required to gain for them absolutely unrestricted admittance to every part of the world whither British enterprise has penetrated, or to obtain for them fuller privileges than they already enjoyed in the Yangtze Valley. That, then, is not the source of exultation. What really inspires the joy of the *Berliner Neueste Nachrichten* is the political side of the question; the idea that whereas the Yangtze Valley had been earmarked as Great Britain's sphere of influence, and would fall to England's share in the partition of China, should that unhappy event occur, Germany by this Convention thinks she has obtained an equal title to the spoils, in witness whereof she places a military garrison in Shanghai. It comes to this then, that an Agreement nominally intended to pledge its signatories against territorial aggression in China, is really an instrument for investing Germany with new political rights over a vast region of the Chinese Empire.

We do not believe for an instant that thoughtful Germans construe the Agreement in the sense given to it by our Berlin contemporary. No necessity exists for Germany to surround her legitimate commercial and industrial expansion with safeguards against British opposition. There may be, it is perfectly right that there should be, keen rivalry between Germans and Englishmen in the field of trade and manufacture, but there is not and there never will be on England's side any attempt to check the growth of Germany's material prosperity by illegitimate, forceful or treacherous methods. German subjects will always have free access to regions where British influence is paramount, and will enjoy there exactly the same privileges as British subjects. But, on the other hand, Great Britain will not consent that regions to which her own subjects have now free access by treaty shall become German preserves and be encircled by a wall of German tariffs. There is no reason why anything but friendship and mutual goodwill should preside over the course of events, if Germany will only allow it, which unhappily she does not seem disposed to do.

THE LIBEL CASE.

The Tokyo Court of Appeal has given judgment in the case of Mr. Matsumoto Kumpei against the *Hochi Shimbun*. This has been a strange affair. Mr. Matsumoto is a graduate of an American University and one of the rising men of the time. He can not be said, however, to be universally popular. A certain section of the public has chosen to regard him as one of the leaders of the "High Collar" party, which position carries with it some shadowy kind of reproach. Last spring, the *Asahi Shimbun* published a most offensive paragraph about Mr. Matsumoto. It accused him of dissolute habits in connexion with dancing girls and of deceiving them by failing to make good his monetary promises. Mr. Matsumoto proceeded against the paper, but the Tokyo District Court which tried the case, decided that the paragraph did not amount to a libel, inasmuch as to associate with *geisha*, being the custom of the time, could not be regarded as in any sense disgraceful. It is questionable whether a more unjust judgment was ever rendered. There could not be the smallest doubt that the *Asahi's* paragraph was intended to injure Mr. Matsumoto's reputation and to hold him up to public ridicule. The procurator, however, did not appeal, and Mr. Matsumoto probably thought it hopeless to do so. Some time afterwards, the *Hochi Shimbun* reproduced the paragraph with embroidery of its own, and Mr. Matsumoto now proceeded against the *Hochi*. This time the same district court had to try the suit. It no longer maintained its former ridiculous plea that immorality is not reprehensible if sufficiently common. But it adopted a still stranger subterfuge, namely, that as the paragraph had not emanated from the *Hochi*, but was merely a reproduction, no guilt attached to the reproducing paper. In other words, the court laid down the wonderful principle that only the concocter of a libel is blameworthy and that its disseminator is guiltless. Against that monstrous doctrine the public procurator appealed, and it is pleasant to find that the higher tribunal has now brushed away all the subterfuges and sillinesses of the lower, and has sentenced the editor of the *Hochi Shimbun* to 15 days' major imprisonment and a fine of 5 yen. We sincerely congratulate the Japanese public on this result, which will no doubt be confirmed by the Court of Cassation if that tribunal's judgment has to be given. So soon as it is known that the law furnishes solid protection against the villainous scribes who batten upon slander and falsehood, an efficient corrective will be applied to the yellow press of Japan.

ST. HILDA'S MISSION.

A very successful sale of work in aid of the funds of St. Hilda's Mission, Tokyo, was held at the residence of Mrs. James Walter, on the Bluff, Yokohama, on Thursday afternoon. The spacious dining-room and the ante-rooms adjoining were filled to overflowing, though admission was by ticket, and a brisk business resulted. During the afternoon Lady MacDonald read a paper on her experiences during the siege of the Legations in Peking, which was listened to with profound interest. Possessing a charming presence, combined with a clear and beautiful enunciation, the speaker enthralled her audience, and the thanks accorded her at the close were of the heartiest character.

THE IRON FOUNDRY.

Tokyo newspapers are beginning to write very strongly against the new Iron Foundry at Wakamatsu. They declare that it is essentially a failure and that although nearly 20 million yen has already been spent upon its construction and equipment, it can not accomplish anything, and will require a further outlay of some two million. When the foundry was projected, one of its main functions was understood to be that it would enable Japan to be self-supplying in the matter of armour plates and ship-building material generally. But according to present appearances it is not able even to manufacture rails.

Mr. Sawara Michio, a member of the Diet, alleges that the Kure Dockyard gives promise of manufacturing armour plates far superior to anything that Wakamatsu is likely to turn out. He alleges that whereas recent experiments showed that six-inch and four-inch plates of British manufacture could easily be pierced with projectiles fired from guns whose calibre he not mentioned, four-inch plates rolled at Kure, successfully resisted projectiles of much greater penetrating power. Therefore he advocates extension of the Kure works on a large scale. Why Kure should succeed where Wakamatsu fails we do not see.

Mr. Wada, chief engineer of the Wakamatsu Iron Foundry, says that the talk about the work being a failure is due to mere ignorance. There was certainly a delay of 20 minutes in producing the results which were shown to the visitors at the opening ceremony, but that was due wholly to bad fuel, the arrangements for producing good fuel not having yet been completed. Mr. Wada expresses absolute confidence, and challenges any tests.

MARQUIS OYAMA.

The *Nichi Nichi Shimbun* emphatically denies that Field-Marshal Marquis Oyama is giving up the position of Chief of Staff. He did resign some time ago, being of the opinion that it was time to make room for a younger man. But the Emperor having refused to accept his resignation, there has not been any attempt to present it again. After the autumn manoeuvres the Field Marshal sought His Majesty's permission to retire for a few days to his villa to recuperate, and that probably gave rise to the rumour that he had again submitted his resignation.

THE LATE MRS. G. M. MEACHAM.

[COMMUNICATED.]

The funeral services of the late Mrs. Meacham, wife of the Reverend G. M. Meacham, D.D., of the Canadian Methodist Mission, were held in the Torizaka Church, Azabu, on Thursday afternoon. Besides the Tokyo friends and members of the Mission from a distance, a large number were present from Yokohama, where for several years Dr. Meacham was pastor of the Union Church. The interment took place in the foreign cemetery at Aoyama, amid a wealth of floral tributes, from near and from far, from foreigners and from Japanese, by which friends had sought to express the sweetness and beauty of the translated life, their sympathy with the sorely stricken husband and sister, and their own sorrow and hope.

PAY OF JAPANESE OFFICERS.

The question of officers' pay is coming vividly before the Japanese public. It was introduced a short time ago by references to the fact that the allowances granted to the families of deceased officers being very small, the future of his wife and children is a constant source of anxiety to a man in time of war, and has an injurious effect upon his fighting capacity. Thereafter the discussion turned to the pay of the officers themselves, and this has led to the publication of a table showing the monthly pay and family pensions granted to officers in various countries:—

		JAPAN.		Ratio of family allowance to pay.
		Pay.	Allowance to family.	
Major.	Peace	103.50	12.50	1/8
	War	141.90	25.00	1/6
Capt.	Peace	74.75	8.33	1/9
	War	102.75	16.66	1/6
GERMANY.				
Major.	Peace	255.73	102.29	1/3
	War	408.79	150.00	1/3
Capt.	Peace	178.39	71.35	1/3

It is expected that steps will soon be taken to redress this state of affairs. Japan can not afford to pay her officers as handsomely as wealthier countries pay them, but she can, and certainly she ought to, establish a juster proportion between an officer's pay and the allowance granted to his widow and children. It is shocking to think that a Major dying on active service in war leaves a family which will have only 25 yen a month to live on.

THE ASHIWO MINE.

In connexion with the trial—on appeal—of the farmers who raised a disturbance in Tochigi and Gumma prefectures on account of the damage caused by poisonous substances from the Ashiwo Copper Mine, it will be remembered that the Judges of the Appeal Court in Tokyo made a journey to the banks of the Watarase River, for the purpose of inspecting the damages *in loco*. Further, the experts of the Imperial University were invited to submit a report on the matter. They have now done so, and are all agreed as to the reality of the injury. Briefly summarized, the gist of what they say is that the matter escaping from the mine is wholly destructive of the fertility of arable land. The unhappy farmers are therefore justified, not indeed as to their riotous proceeding, but as to the pressing nature of their grievance. They saw themselves being gradually ruined and their families being deprived of sustenance. Who can wonder that they lost patience? Mr. Tanaka Shozo also is justified. It is conceivable that some consciousness of the urgent grievance he had undertaken to redress induced his fellow-members in the Diet to treat his ebullitions of temper with forbearance.

COUNT OKUMA.

Count Okuma gave a second garden party at his Waseda villa on the 24th instant. The entertainment seems to have partaken of a political character, as the principal guests were members of the *Kōshi-kai* and the Asahi Club of the House of Peers, the rest of the party consisting mainly of members of the Progressists. It will be remembered that Count Okuma previously entertained other sections of the Upper House.

Another entertainment was given by Count Okuma on the evening of the 23rd to the pupils of the Waseda College and their friends. On this occasion the papers report that Count Okuma denounced the recent failure to sell bonds in America as due entirely to the Government's choice of bad agents. Had the Bank of Japan or the Specie Bank been employed, there could have been no difficulty in effecting such a petty transaction.

The Count spoke also of the Capital Funds. He declined to regard that question as serious. If it be sufficient to restore the Naval Maintenance Fund by means of bonds, then the Fund might as well have no existence, since in a time of emergency it would not be serviceable. If, on the other hand, its restoration with ready money he insisted on, the demand is unreasonable in the present state of Japan's finances. Evidently, if we may judge by these utterances, Count Okuma regards the Fund in the light of a provision against a time of war. That, however, is not the character assigned to the Fund by Count Matsukata at the time of its creation. On the contrary, Count Matsukata took much pains to explain that the Fund must not be regarded in any sense as a provision against warlike contingencies.

Count Okuma further took occasion to ridicule the notion that by giving chrysanthemum parties to members of the House of Peers he sought to win them to his side politically. It was absurd to suppose that an occasional garden party should have such results. People that found themselves at discord with the House of Peers were wont to accuse the latter of being influenced by sentiment only, but according to Count Okuma's opinion and experience, the co-operation of the House of Peers could be secured by any politicians that walked straight along the path of public interest.

Another very interesting remark made by Count Okuma related to the cost of official undertakings as compared with private. He had recently learned something from an object lesson within the range of his own experience. Having had his house burned last spring, he had caused plans to be made for another, and had busied himself procuring materials and looking after the work, the result being that the cost was about one-third of what it would have been under official management. The inference was that middlemen are one of the worst epidemics of the era.

THE MORMONS.

It is stated by the *Yomiuri Shimbun* that official permission has been given to the Mormons to propagate their creed in Japan. We sincerely trust that such is not the case. It is true that the Mormon Elders now in this country are said to have pledged themselves not to preach the doctrine of plural marriages; but had the Authorities taken the trouble to peruse the

correspondence published in these columns, they would have seen clearly that the Mormons still hold to the principle of polygamy, and that, holding it, they will necessarily consider themselves bound to inculcate it. There can be no evasion in this matter. If the teacher of a religion believes certain things and if he believes them sincerely, he must teach them. He may not preach them from the pulpit or the platform, but he will assuredly use his influence and his persuasive power to induce others to share his belief, and in granting to the Mormons permission to teach and preach in this country, the Japanese Government sanctions the propagandism of the principle of plural marriages. It is not a matter of query or peradventure. It is absolutely certain. We can understand the reluctance of the Japanese Government to exercise any discretion which might be construed as an evidence of religious intolerance, but in the case of the Mormons a strong stand might have been taken without any such apprehension.

RATS AND THE PLAGUE.

We have now a repetition of an old view about rats as media for propagating pest. Dr. Proust, who was sent to Marseilles by the French Government to study means of protection against the plague, is said to have arrived at the conclusion that the fleas of rats are the sources of infection. Precautions were therefore adopted against the coming ashore of rats from the contaminated ships. If that theory be correct, the slaughter of rats in time of plague is not a wise measure. On the contrary, the better plan would be to leave them severely alone and to refrain from disturbing their colonies of fleas. It is more dangerous, if Dr. Proust's theory be correct, to handle a recently killed rat than a live one. A curious fact is that the same view was put forward by Mr. Plummer of Hongkong during the epidemic of 1894, and was scouted at the time. If there is anything in it, Dr. Proust will now get the credit of being the discoverer. At all events it is a comprehensible explanation of the manner in which rats help to spread the plague.

GOVERNMENT BILLS.

It is alleged that the following bills have already been prepared by the Government for submission to the Diet next session:—

1. Bill making better provision for the families of deceased officers.
2. Bill amending the general rules for education.
3. Bill amending the Criminal Code.
4. Bills relating to banking; to savings banks; to bonded warehouses; to registration, and to lands exempted from taxation.
5. Bill for amending the system of issuing Exchequer Bonds.
6. Bills for State protection to agricultural experiment stations and for amending the system of protection against noxious insects.
7. Bill for aid to a submarine cable.
8. Bill relating to premium-bonds for postal savings banks.
9. Bill for continuing the operation of Law No. 63 (relating to Formosa).
10. Bill for a coöperative monopoly of camphor in Formosa and Japan.
11. Bill relating to capital for railway materials.
12. Bill for coöperation between the law courts in Formosa and Japan.

The Tokyo Electric Car Company will hold its semi-annual meeting on Dec. 10th at 1 p.m. in the Geological Association's hall in Kyobashi, Tokyo. A dividend of 20.6 per cent. per annum will be declared.

THE NIPPON YUSEN KAISHA.

The half-yearly meeting of the shareholders of the Nippon Yusen Kaisha took place in the *Seinen Kai-kan* at Kanda on the 27th instant, Mr. Kondo Rempei presiding. The accounts and report having been read, Mr. Kondo delivered an address, describing briefly the growth of the company to its present large dimensions. He explained that by adding half a million *yen* to the reserve for equalizing dividends, it would reach a total of 3,300,000 *yen*, which seemed sufficient for the present, since, unless some extraordinary contingency occurred, the Company, possessing such a reserve, could confidently count on paying a dividend of 12 per cent. during the next year and a half. Speaking of the fund for developing navigation and improving the fleet, he insisted on the vital importance of such measures. It would be necessary to add to the fleet by the year 1907 no less than 16 steamers aggregating forty thousand tons. The cost of these vessels would be eight million *yen*, and by setting aside half a million *yen* every six months, a fund of six millions would be provided, thus enabling the Company to make the necessary additions without incurring any debts. He therefore trusted that the report and accounts would be passed.

At this point Mr. Kishimoto Tatsuo made his anticipated attempt to disturb the arrangements, but whereas it had been reported by the newspapers that he intended to prefer a series of sweeping charges, his speech was found to contain nothing except a protest against the sum appropriated for allowances to high officers of the Company. He claimed that the sum was out of proportion to the amounts set aside for such a purpose by other companies, and he moved that it be reduced and that it take the form of a salary. Considerable discussion ensued, and the President finally announced that the opinion of the meeting would be taken on the question of passing the accounts and the report as they stood. Mr. Kishimoto objected to such a manner of voting and insisted that his proposal must be put, but an overwhelming majority voted for passing the report and the accounts *en bloc*. It may be added that 2103 shareholders were represented, their aggregate shares being 301,418, or about three-fourths of the total issued by the Company. The attempt of Mr. Kishimoto thus proved a complete fiasco.

The following accounts were presented:—

Net profits for the half year ended Sept. Yen.	
30th	2,639,628
Brought over from previous account	631,969

Total..... 3,271,597

	Yen.
To Reserve	131,981
To Reserve for equalizing dividends	600,000
To Capital Fund for Extending Navigation and Improving Ships	500,000
Allowances to Officers	78,529
Dividend (10 per cent., per annum)	1,100,000
Special Dividend (2 per cent., per annum)	220,000
Carried over to next account ...	641,089
	3,271,597

The earnings of the Company and its receipts during the six months' were:—

	Yen.
Carriage of goods	6,927,288
Passengers	1,383,190
Ships chartered	513,304
Interest, &c.	289,628
Earnings from godowns in Yokohama, lighters, &c.	14,754
Land rents and warehouses rented	37,688
Profits on Exchange	1,756
Sales of unneeded stores, &c.	187,876
Subsidies	2,089,438
Bounties	346,963

FORMOSAN AFFAIRS.

Dr. Goto, Chief of the Civil Administration of Formosa, is now in Tokyo, and the newspapers of the capital say that the chief object of his visit is to promote the project for a camphor monopoly in Japan. He attributes to the Formosa monopoly the fact that the price of camphor has been nearly doubled in the market, but he declares that unless some control be organized in Japan proper, this fortunate result will soon be jeopardised. Last session the two Houses of the Diet made representations as to the advisability of bringing Japan into touch with the Formosan monopoly. It is therefore probable that if the Government now introduces a bill in that sense, no serious opposition would be offered. The Formosan authorities already have an office in Kobe, and Dr. Goto says that if they established an office in Nagasaki, they could easily cooperate for the purpose of the Japan monopoly.

There has been a recrudescence of disturbance in Formosa. On the 25th instant, a number of insurgents attacked the post office and the local office at a place called Bokushikyoku in Taiwan and killed twenty Japanese. On the same day a band of 600 rioters assaulted Taseki-ko, but were repulsed by the guards. It was hoped that these incidents were at an end, but evidently the business of fully establishing order in Formosa has not yet been completed.

Further details of the raid by rebels at Bokushikyoku, in the vicinity of Kagi, show that the chief official of the local office, of the post office, and the doctor of the district, together with twelve others, including women, were killed; two were carried off; three were severely wounded and one is missing. The rioters are now said to have numbered 200 men. The archives of the offices were carried out and burned, and the offices were wrecked. The two persons carried off were women, but they returned safely the next day.

The official report, just published, shows that the statements received from private sources exaggerated the casualties caused by the recent recrudescence of insurrection in Formosa. Only one chief official was killed. Those that lost their lives were a junior officer of the local office, two employes, and the wife of one of them, a doctor and two merchants—a total of eleven. Three policemen were wounded. The official residence of the chief local official, his office and the guard house were successfully defended. The insurgents were driven off by a relief from Kagi, and they left 4 dead and wounded on the field. They were pursued to Yensui-ko, where, on the 24th instant, 31 of them were killed and on the 25th instant 28. They had divided into two bodies for the purpose of flight, but there is no news as to whether the second body was pursued. At all events the punishment inflicted was sufficiently drastic.

News from Formosa, dated Nov. 17th, says that Baron Kodama, Governor-General of Formosa, will set out for Tokyo either on the 1st or the 5th of December to attend the coming session of the Diet. In view of the fact that there is still no Chamber of Commerce in the island, influential business establishments such as the Formosa branch of Messrs. Samuel, Samuel & Co., the Mitsui Bussan, etc. have proposed that a Chamber of Commerce be established there and a representation to that effect is expected to be made to the Central Government shortly.

MARRIAGE IN TOKYO.

On the 27th instant at 2 o'clock in the afternoon, the marriage of Mr. S. Ando, son of Mr. T. Ando, formerly Japanese Consul-General in Hawaii, and Miss J. Jaudon, daughter of the late Mr. Peyton Jaudon, of Tokyo, took place in Trinity Cathedral, Tokyo, the Right Rev. Bishop McKim officiating. The Cathedral was beautifully decorated and a large number of people, foreigners and Japanese, assembled to witness the ceremony. Mr. J. T. Griffin presided at the organ and played with his well known skill. The bride was dressed entirely in white satin decorated with orange blossoms, and the costumes of the three bridesmaids—Miss Ine Brinkley, Miss I. Irwin and Miss Duer—were very picturesque, being simple studies in white and pink. Captain Masaki acted as best man, and Messrs. Swan, Sperry, Chapman, Takashima, Iwai and Nemoto performed the duties of ushers. After the ceremony a reception was held at the residence of Captain and Mrs. Brinkley in Azabu, and the bride and bridegroom left by the 5.10 train for Yokohama, whence they started on the following day for their wedding tour.

MR. CHINDA'S OBSERVATIONS.

Mr. Chinda says that the Russian Minister of Finance himself had planned a trip to the Far East this autumn, but was prevented at the last moment from starting and Mr. Romanoff went in his stead. It is thought, however, that Mr. de Witte will carry out his intention next spring.

Concerning the Trans-Asian Railway, Mr. Chinda does not by any means share the pessimistic views of some folks. He notes that Mr. Lessar, the Russian Representative in Peking, proceeded to his post by the new line, and that Mr. Romanoff also travelled by it. The time required between St. Petersburg and Vladivostok is said to be 20 days, and it is impossible to endorse the forecast that the line will be used for military purposes and tourists only. It will doubtless prove an important commercial route, and Japan, reckoning with that fact, must make her preparations accordingly.

The illness of Mr. Yang was very serious at one time, according to Mr. Chinda, but when the latter left St. Petersburg Mr. Yang had partially recovered. He still considered himself too ill, however, to discharge his duties of Minister, and having sent in his resignation, was only awaiting the appointment of a successor.

Referring to the Russophobic tone adopted by some of the Japanese journals, Mr. Chinda took much the same line as that taken by Baron Hayashi at the time of the latter's return from St. Petersburg. He said that the writings in Russian newspapers about Japan were much more moderate, and he added that Russia's appreciation of the Japanese army had been so much enhanced by the Chili campaign that her disposition to remain on friendly terms with this country had certainly been increased.

There are, according to Mr. Chinda, twenty Japanese subjects residing in St. Petersburg. Two of them are merchants and one is a university teacher. The others are of various professions.

Mr. Chinda, hitherto Japanese Representative in St. Petersburg, was relieved of that office on the 27th instant and appointed Vice-Minister of Foreign Affairs.

THE BOER FORCE AT THE OUTBREAK OF HOSTILITIES.

We take from the columns of *The Times* the following interesting paragraph, which appears to be one of the only authoritative statements by a Boer as to the military strength of the two republics when the war broke out:—

The *Times of Natal* publishes a letter from Mr. J. H. Munnik, the late State Mining Engineer of the Transvaal, to Cherry Emmett, the brother-in-law of General Louis Botha, whom he accompanied in his recent attack on Itala. The letter, which is dated Pretoria, September 20, 1899, was found at Emmet's house near Vryheid. Mr. Munnik, who was placed in charge of the mines at the outbreak of the war, is now a prisoner in Ceylon. The writer gives his views on the situation, and after mentioning that the Free State commandants had been in Pretoria the day before adds:—"From the information we have here they will stand with us to a man. I hear on good authority this morning that the combined force of 'dienstaare burgers,' according to the compiled list of the two Republics, is 80,000." As the *Times of Natal* observes, the document is an artless, confidential letter from one friend to another bearing the stamp of truthfulness. Mr. Munnik's statement as to the numerical strength of the Boers at the outbreak of the war is confirmed, as his official report to the American Consul in 1899 may probably be accepted as accurate. The figures, of course, do not include foreigners or Cape rebels.

If Mr. Munnik's statement be even approximately correct, there must have been over a hundred thousand men fighting against England at one time.

THE LATE COUNT HATZFELDT.

Count von Hatzfeldt-Wildenburg, whose death is reported in our telegrams, appears to have been ill for some time, for a Berlin dispatch of Nov. 13th, published in these columns on the 21st, stated that he was about to retire into private life and that the Prussian Minister at Hamburg, Count Wolff-Meternich, would succeed him.

The deceased nobleman was born in 1831 and specially educated for diplomacy. In 1862 he was secretary to Prince Bismarck when Ambassador in Paris, and was always one of the great Chancellor's favourites subsequently. In 1874 he became Ambassador at Madrid, then at Constantinople, being recalled in 1883 to Berlin to act as Minister of Foreign Affairs. In 1888 he was appointed Ambassador in London in succession to Count Münster. He married the daughter of Mr. Charles Moulton, of New York, was divorced from her in 1886 and re-married in 1888, in order that their daughter might marry Prince Maximilian of Hohenlohe.

KOREA.

The *Nippon* and the *Yomiuri* contain a vehement accusation against the conduct of the French missionaries in Korea. It is alleged that the Fathers are perverting their religious propagandism into a political weapon, but we can not accurately follow the line of reasoning. The story is that an attempt is made to force religion down the people's throats by promising that if they become converts their taxes will be remitted, whereas if they remain obdurate they will be heavily mulct. The people complain to the local authorities, but the latter, remembering the experience of their colleagues in Quelpart,—where it is now affirmed that the trouble was entirely due to violence on the part of Christian converts—decline to take any steps. If the story stopped there it would at least be coherent, however incredible. But it goes on to say that the scene specially chosen by the missionaries for

their activity is the islands off Chollado, their ultimate aim being to obtain for France a naval station at Chang-chik-no, where the fleets of Russia and France might ride together without difficulty. How that is to be managed by such procedure the public is not informed, unless, indeed, we are to assume that the Fathers aim at creating a disturbance which will cost some of them their lives, and thus furnish a pretext for a seizure of territory by France, according to the most approved modern pattern. It should be observed that the simultaneous publication of such an item of intelligence by two or more journals in Tokyo does not add any weight to it. The source is the same in all cases, namely, a news agency, which manufactures items for the journalistic market, and makes them out of whole cloth quite as often as out of properly shaped materials.

Having in view the proposed construction of the Söul-Fusan Railway in Korea, the Tokyo Rice Dealers' Guild recently communicated their views to the projectors of the railway with regard to the future prospects of trade between Korea and Japan, and stated that over 150 members of the guild would like to become shareholders in the railway company. It need scarcely be said, they added, that the importation of Korean rice to Japan during recent years has reached enormous figures; for instance, the total in 1898 was 649,570 piculs representing yen 2,704,887 and in 1899, 436,711 piculs valued at yen 1,689,909.

A conference of Japanese Chambers of Commerce in Korea was held in Chemulpo on Nov. 15th and the meeting was attended by representatives from Söul, Fusan, Gensan and Mokpho. The principal business presented for consideration consisted of the following:—(1) That the period of storing imported goods in store-houses should be extended from three months to six months. (2) That a note of thanks should be presented to the Japanese Minister in Söul in connection with the withdrawal of the grain veto. (3) That the headquarters of the Japanese Chambers of Commerce in Korea should be established in Söul. (4) That the Japanese Government should be asked to lay before the coming session of the Diet a bill in favour of free emigration to Korea, and that a representation be made to the Government for the abolition of the law relating to pass-ports and emigration to Korea. (4) That a Japan-Korea Bank should be opened. (5) That the freight rates on Japanese goods to Korea should be lowered.

(FROM A CORRESPONDENT.)

This is the busy season for the Korean women—the time for making *kimchi*, a necessary article of food in every home. The chief ingredients are cabbage, radish, pepper, leeks, and salt, made into a pickle and then allowed to stand until it attains a certain strength, when it is served to be eaten with the boiled rice. A poor man came here a few days ago and said: "At our house we have not been able to make *kimchi* for three years. *Kimchi* is half." He assumed I would be able to draw the only and most legitimate inference from these two statements. The second morning after this conversation, he was sent away carrying a jiggly load of cabbage and radish to his humble abode. The drought in this region has affected seriously the supply of vegetables and roots and prices are ruinously high for the poor.

Söul is threatened with a water famine. Some of the best wells are running low. The city did not have the usual summer washout and is more than ordinarily filthy. The outlook as we are entering on the winter is anything but hopeful. The average Korean takes the fatalistic view, if we live we live, if we die we die, and there is little we can do to change our condition.

The Imperial exchequer is, according to common report, low, very low. In some departments of the Government the officials have not been

paid their salaries for several months, while in others, especially the War Department, everybody is paid up promptly.

This suggests the very large increase in the number of soldiers in the city. Less than two years ago there were only about two thousand, now the number has quadrupled and there is talk of increasing the number until twenty thousand is reached. Whether this large increase in the military department is wise or not, there is one thing quite certain and that is the appearance of the soldiers and policemen has improved immensely. In their neat uniforms and erect, graceful bearing they look well as they walk along the street or guard the principal thoroughfares leading to the Imperial Palace.

Mr. J. R. Jordan, the British Minister, has returned from his furlough. Mr. J. H. Gubbins, the efficient *Chargé d'Affaires* during Mr. Jordan's holiday, left a few days ago.

The American Minister, the Hon. H. N. Allen, left about a month ago on a six months' leave of absence to the United States. Mr. Gordon Paddock, the Secretary, is in charge of the Legation. Söul, Nov. 15th, 1901.

THE MILITARY OFFICERS' COLLEGE.

The Emperor had not recovered sufficiently to attend the 13th graduation ceremony at the Army Officers' College on the 22nd instant. His Majesty was represented by Prince Kanin, who, in the Sovereign's name, presented a gold watch to each of the eight students that had chiefly distinguished themselves at the examination and during the course of their studies. The numbers of graduates were 416 officers for the infantry, 68 for the cavalry, 110 for the field artillery, 56 for the garrison artillery, 32 for the engineers and 40 for the military train; a total of 722, being nearly double the usual figure.

NOTES ON CURRENT EVENTS.

The Japanese in Hawaii are said to have resolved that the formation of a society is essential to the maintenance of their interests, a decision prompted in great part by the experiences of last summer, when the sanitary officials discriminated against Japanese ladies. The projectors of the Society recently took steps of organization, and on the Emperor's birthday they celebrated their union, 350 regular members being enrolled, each agreeing to pay a subscription of 4 yen monthly. There are also a thousand associates (*junkai-in*), mostly of the labouring classes. Mr. Shiota Okuzo, formerly a member of the Diet, is president of the Society.

The number of agricultural banks established throughout the country is 46 and their nominal capital aggregates 28,370,000 yen, of which total about ten million yen have been paid up and the remainder will probably be received in the course of one or two years. Meanwhile these banks find it impossible to grant accommodation to farmers unless they can obtain funds from some source. They have endeavoured to procure assistance from the Industrial Bank, but the latter has need of all the funds at its disposal. It is therefore proposed to issue premium-bearing debentures, and efforts are being made to obtain the sanction of the Finance Department.

The customs returns for the first half of the current month show that exports have exceeded imports to the extent of 33½ million yen. There has been a steady tendency towards a "favourable" balance of trade, and we presume that the financiers who tremble for their gold reserve will rejoice over these returns, but there are others who,

applying the analogy of an ordinary household, will say that it is not usually regarded as a sign of flourishing circumstances when a family restricts its purchases.

The Japanese Consul at Newchwang reports that when the Japanese steamer *Nanyetsu Maru* was about to leave the harbour, she caught fire, and the efforts of her crew proving unable to cope with the emergency, she signalled for help, which speedily came from the Russian war-ship *Bobre*. By this means the flames were soon extinguished, but had it not been for the aid rendered by the *Bobre* a very different result would have had to be recorded.

The Governor of Yamaguchi reports that during the gale on the 19th instant eleven fishing boats were wrecked. Several lives were lost but an exact record has not yet been compiled.

The torpedo-destroyer just launched at Yarrow to the order of the Japanese Government has been called the *Akatsuki*.

Baron and Baroness Shibusawa entertained a large party of Japanese and foreign friends at their villa in the Oji suburb of Tokyo on the afternoon of the 23rd instant. There was a beautiful display of chrysanthemums in the spacious grounds, and as the celebrated maples of Asuka-yama had not yet lost their autumnal tints, the scene, bathed in the soft sunshine of November, looked very lovely. The party was in commemoration of Baron Shibusawa's sixtieth birthday, and during the course of a sumptuous *al fresco* repast the health of the universally popular and respected host was drunk with enthusiasm.

Field-Marshal Marquis Oyama has definitely resigned the post of Chief of Staff, and has retired to his villa at Numazu, where he announces his intention of spending some time.

The canteen at Yokosuka was broken into on the night of the 17th instant and a sum, variously stated at from 300 to 1,000 *yen*, was stolen. Much suspicion has been excited by the affair, as it is thought impossible that a common thief could have eluded the numerous guards stationed at the place. A file was found outside the canteen strong room, and the window had been broken open, but it is thought that these things were intended solely as a blind, and that the robbery was affected by collusion among the men themselves.

Mr. Motono, Japanese Representative in Belgium, reached Nagasaki on the morning of the 24th, and set out for Kobe on the 25th. He is stated to have said that there are only ten Japanese subjects in Belgium, a fact upon which the comment of the Japanese public should be that the presence of as many hundreds there would be better news.

The Emperor of Germany granted audience to Marquis Ito on the 22nd instant, after which the Marquis visited the Chancellor of the Empire and the Minister of Foreign Affairs. The telegraph adds that Marquis Ito was entertained at luncheon and dinner, but by whom we do not gather clearly.

Mr. Chinda, Japanese Representative in St. Petersburg, who has just returned to Japan, says that Mr. Yang, Chinese Minister in that city, is dangerously ill, and that no hopes are entertained of his recovery. If that be so, it may be necessary to modify the verdict which credited Mr. Yang with the novel and brilliant diplomatic device of falling

downstairs when required to sign a convention that seemed injurious to his country's interests. His Excellency's fall was probably involuntary, though its timeliness seemed to preclude the idea of accident.

The *Kokumin Shimbun* states that during his stay in Japan M. Romanoff completed two important transactions. One was an agreement with the Mitsui Mine at Miike for the delivery of 550,000 tons of coal to the Russian naval squadron yearly during a period of 5 years; the other was the placing of an order with the Russo-Chinese Bank for the purchase of 50,000 shares of the Kiushiu Railway at 55 *yen* per share.

Tokyo journals discuss the question of Field Marshal Marquis Oyama's successor as Chief of Staff. They say that Marquis Yamagata would be altogether suitable were it not for his markedly pro-Choshu proclivities; that Viscount Katsura is fully competent for the post but has not sufficient influence; that Count Nozu would doubtless be put forward by the Satsuma men, but that he is not skilled in matters demanding tact; that Viscount Takashima would like the post, but has little chance of getting it, and so on, the final conclusion reached being that the office will be temporarily taken by Marquis Yamagata or by a Prince of the Blood.

The *Niroku Shimpō* has a strange paragraph to the effect that a number of Buddhist images and articles of Buddhist temple furniture, taken by soldiers of France, Germany, Russia and America in China, have come into the possession of Messrs. Rikimu and Yasui, two Japanese merchants. The original purloiners of the objects not venturing to send them to Europe for sale and finding no purchasers in China, sold them at very low rates to the two merchants. These have stored the effigies in Osaka, but there also no buyers are forthcoming, and the speculation has consequently become perplexing. Our contemporary adds that the great temple of Higashi-Hongwan-ji, seeing in this incident a means of repairing its shattered finances, planned to purchase the assemblage of gods *en bloc*, and then to distribute them among the various parishes of its diocese at handsomely remunerative rates. But Messrs. Rikimu and Yasui want two hundred thousand *yen* for the lot, and the temple's finances do not permit such a payment in a lump sum. There is talk of installments, which proposal, however, finds no favour with the merchants. We imagine that one explanation of the difficulty of selling these things is their essential ugliness. The images in Chinese temples are generally monstrosities. We have never seen one that could boast any features either artistic or beautiful, and though as archaeological or historical objects these *spolia sacra* may have interest, the market for them must always be very limited.

The vacancies caused in the Privy Council by the deaths of Viscount Nirei and Kioka have now been filled by the appointment of Viscount Aoki and Baron Nishi. The ceremony of appointment took place at the Palace on the 25th instant.

There appears to have been something of a disturbance between the Japanese police and Russian sailors at Inasa. The trouble commenced with riotous conduct on the part of a liberty man, and when the police attempted to apprehend him, about 200 of his comrades came to the rescue, using stones freely, and wounding nine Japanese civilians

and three constables. Finally, three of the rioters were arrested and marched off to the station. The policeman at Nagasaki has a tolerably lively time.

Some publicists are arguing that the Ashio Copper Mine should be closed on account of the injury it causes to agricultural interests. With reference to that, the *Asahi Shimbun* points out that the quantity of ore extracted last year was 11,759,928 *kwan* (1 *kwan* = 8 1/2 lbs.), and the total quantity of refined copper was 11,862,137 *kwan*, the value of which, at 1 *yen* per 20 catties, was 12,952,270 *yen*. The number of men now employed is 13,600. Such a work could not easily be abandoned.

Mr. Tsai, the new Chinese Representative in Japan, seems to have had a great send-off from Shanghai, where his service as Taotai has made him well known. Sir Ernest Satow happened to be in Shanghai at the time, and he arranged for a guard of honour to conduct Mr. Tsai to his ship. The Minister is accompanied to Tokyo by a son of Yung Lu, who has been adopted by the Viceroy of Szechuan; a grandson of Liu Kun-yi; a grand-nephew of the late Li Hung-chang; and a son of the present Taotai of Shanghai. The *Fiji Shimpō's* correspondent, in sending this news, notes that Chang Chih-tung's grandson, and Wang Chih-chung's son are already in Japan.

There has been a heavy fall of snow in Hokkaido accompanied by a gale of wind. This was on the 25th instant. Kyoto also had a slight snow-storm on the same day, but in Tokyo the only evidence of these disturbances was a half-gale during a few hours. Frost, however, has come unusually early this season. On the night of the 25th and 26th ice formed in Yokohama and Tokyo; a phenomenon seldom witnessed before December.

Marquis Ito left Berlin for St. Petersburg on the 25th instant. Nothing is yet said about his return to Japan.

The rewards for the naval division engaged in the Chinese campaign have just been published. Captain Nagamine receives the Third Class Order of the Rising Sun and a gratuity of 2,800 *yen*. Next on the list are Captains Takikawa, Takenouchi, Sakamoto and Yoshimasa, who receive the same Order but a gratuity of only 1,080 *yen*. There is a long list of other names.

FOREIGN STUDENTS IN BERLIN.

A complaint was recently made in Germany that foreign students are admitted to the Berlin Technical School without satisfying the tests to which German students are subjected, the result being detrimental to the latter in the matter of over-crowding and in checking general progress by imposing needlessly onerous duties on professors. Russian students were understood to have been the principal cause of this dissatisfaction, but the question had interest for several nationalities in Europe and also for Japan. It has now been decided that Russians will not be admitted unless they can prove that they have attended a technical college in their own country, or have at least been permitted to matriculate at one. "Other foreigners will be admitted only when they can produce a certificate showing that they have passed some examination which entitles them to enter a university or other institution of similar standing in their own country."

WILL ADAMS' GRAVE.

A CORRESPONDENT, the Rev. A. F. KING, raises the question whether the grave of WILL ADAMS at Hemi really contains the remains of the British pilot, and suggests that the matter should be investigated before taking any further steps for the purpose of removing the bones to Yokohama cemetery. Mr. KING's doubt is suggested by Dr. RIESS' conclusion that WILL ADAMS died at Hirado, and that the strong probability is that he was buried there also. Yet surely if he died at Hirado there could not have been any sufficient reason for carrying his remains to Hemi and interring them there. On the other hand, supposing that he died and was buried at Hirado, how are we to account for the existence of his tomb at Hemi? It is difficult to imagine that during all these years the man's grave has been erroneously supposed to be at a place hundreds of miles from the spot where he is really interred. The general belief among the Japanese, a belief confirmed by all traditions, is that WILL ADAMS was assigned by the Tokugawa Government a residence near the spot where his tomb is now situated, and that he was buried in the immediate vicinity of the place where his last days had been spent. It seems to us rational and reasonable to conclude that where his sepulchre stands, and has stood for nearly three centuries, there also lies his dust. We may add in this context that the proposition to remove the remains to the Yokohama cemetery will not, we think, commend itself to the public. Many associations have grown up about the tomb as the foreign public knows it. It looks out over the sea upon which the eyes of the old pilot must often have rested in his declining years—rested perhaps with sad thoughts of the country and the friends he should never see again. It would be a sacrilege to collect his bones and carry them to a modern cemetery. Besides, it is not impossible that the police should effectively guard the tomb in its present place against the wanton injury which has been referred to by correspondents. The memory of WILL ADAMS is respected by all the British residents, and if the necessary restorations were effected at the sepulchre, we are persuaded that the Japanese Government would willingly lend its aid to preserve a monument so well deserving tender care.

YOKOHAMA LITERARY SOCIETY.

Van Schaick Hall was exceptionally well-filled on Friday evening by a very appreciative audience which seemed to find much enjoyment listening to reminiscences of school days in the United States. The symposium on American College Life seemed like a breeze from across the Pacific and when enlivened by college songs, rendered by an impromptu quartette, brought back student days in a very vivid manner to the minds of many. The addresses were informal and filled with humorous incidents of College experiences and student pranks. The serious side of University life was alluded to, but Mr. Helm's story of "Jack the College dog," Mr. Swan's naive accounts of the freshmen's trials, and Mr. Parshley's vivid picture of the old time College President with his summary discipline, were especially

enjoyed by the audience and they were quite ready to take for granted the existence of the class-room studies which appertain to student days. Mrs. Dearing's paper, given below, was an entertaining picture of life in one of the many co-educational institutions of America. The musical programme was an unusually good one. Mr. Schlüter's playing was thoroughly artistic and keenly appreciated; the trio was finely rendered by Mr. Schlüter, Mr. Poole and Miss Poole; Mrs. Ward gave a brilliant piano solo on her first appearance before the Literary Society; Mr. Sulzer's songs proved sweet and were well rendered; and the duet by Mme. Henckler and Mr. Sulzer brought out the rich qualities of both voices. Taken all together the programme was very enjoyable.

PART I.

SYMPOSIUM: AMERICAN COLLEGE LIFE.

- 1.—De Pauw University Mr. Helm.
- 2.—Boston University Mrs. Dearing.
- 3.—College Songs.....Messrs. McChesney, Swan, Parshley and Dearing.
- 4.—University of California Mr. Swan.
- 5.—Brown University Mr. Parshley.

PART II.

- 1.—Piano Solo...."La Polka de la Reine".....Raff. Mrs. R. J. Ward.
- 2.—Tenor Solo.....(a) "Wohin".....Schubert. (b) "Wanderlied".....Schumann. Mr. Robert Sulzer.
- 3.—Violin Solo.....(a) "Berceuse".....Godard. (b) "Hungarian Dance".....Ondrick. Mr. Max Schlüter.
- 4.—Duet from...."Bride of Dunkerton".....H. Smart. Mme. Henckler and Mr. Sulzer.
- 5.—Trio: Duetini for two Violins & Piano...Godard. Pastorale—"Sadness"—"Forsaken"—"Midnight"—"Serenade".

Messrs. M. Schlüter, H. A. Poole & Miss E. Poole.

STUDENT LIFE AT BOSTON UNIVERSITY.

They are not attended with much glory, the magicians who carry me back to student days in Boston, and yet they succeed in their task with the ease of the Oriental slaves of the ring. The magic signs are very simple; they consist only of a tender-eyed Italian beggar and his weather-beaten hand-organ. Yet the thought of the rude strains carries me back to Boston, and I live over again those happy mornings in the class-rooms with "Molly Darling" or "The Mocking-Bird" mingling their distant sweetness with lectures on the Theory of Knowledge and Metaphysics. Or again, I experience afresh those winter afternoons spent with a favourite professor in a little room high up on a level with the neighbouring roofs and chimnies—a little room devoted to classical studies; Latin Literature, Philology and the Sanscrit Vedas, always in memory associated with the warm afterglow of the wintry afternoon—the murky twilight, the smoking chimnies, and far below the soul of the Italian organ mingling heart-beats with the rumble and murmur of the streets.

Boston University, my *alma mater*, is situated in the most aristocratic quarter of old, aristocratic Boston. Those of you who know anything about the city have heard of the far-famed golden-dome of the State-House, that magnificent old building standing on Beacon Hill, and it is under the shadow of the golden-dome that the wise founders of the University located the College so dear to all who know her. At the risk of being called a sentimentalist, I lay claim to a certain atmosphere in that part of Boston found nowhere else in the known world, which indelibly leaves its marks of culture on all who live within its radius. It was my happy privilege to plod up and down that historic hill sacred to all Boston's literati, for four years, meeting continually faces and forms well-known to the public, great names in literature, politics, and the musical world. There were other outside influences worth speaking of, for it is not alone what takes place inside the four walls of a College that makes or mars the lives of the students. One of the most esteemed privileges was that of admission to the Athenæum, the oldest and most conservative library in Boston. One could only be admitted within its sacred precincts if one had a kind friend among the shareholders, so the privilege of study there was a rare and richly appreciated one. There is a feeling of awe engendered by the Athenæum which I have never felt anywhere else. A word spoken above a whisper seems a profanation to the divini-

ties of the place. It is a building pervaded by silence, a silence that differs from that of an ordinary library. With the exception of the real live university students, the habitués of the Athenæum are men and women who apparently live only in the world of books. Books fill every nook and cranny and balcony of the long, beautiful library, books so old and hoary that the very odour of the place is full of an old-worldness, such as I fancy enwraps the libraries of the old European monasteries. One other of the outside influences of Boston student life is the Common. Every one who knows Boston loves her beautiful Common, stretching as it does its rich green length through the midst of the busy city, and furnishing a charming walk to all sorts and conditions of men, and none more so than to the University men and women. There it was we strolled after lecture hours were over, before separating for our suburban homes. There it was we settled our quarrels. There it was we grew sentimental over the future and made vows of undying friendship. (We were optimists in those days and, thank God, many of us are now). And I must touch just here on that part of our college life at Boston—those rare friendships that were born, and nurtured, and brought to full fruition not only between woman and woman, man and man, but also between man and woman. For ours is a co-educational institution in Boston and the relation that exists between the young men and women is one founded on a broad and liberal basis. Strange, to say very few of these warm friendships ripened into love, although each class could boast one or two exceptions. There were no rules at Boston. We were supposed to be ladies and gentlemen, and capable of governing ourselves, and no such thing as discipline was ever so much as hinted at among us. We were allowed the greatest liberties and the class-rooms, the library, the chapel, and cosy nooks in the broad halls and stair-ways were always open to all and at our disposal for quiet chats and tête-à-têtes, as well as for study. In the women's study alone no men were allowed. This beautiful room, which bore the graceful name of "Parthenon," was too alluring for any diligent study. The semi-circular, high-backed cushioned seats that filled the alcoves at either end of the long room were so conducive to confidential conversations or the reading of the latest magazine that to study thereon seemed a desecration. I love to think of that study as one sacred to friendships. There perhaps we first met the girl whose life was to be close to ours. There we bore each others' burdens, and rejoiced in each others' successes. There we celebrated together red-letter days, and the eves of holidays. There, in that lovely study, we learned the value of unselfishness, and tried to put into practice what we heard preached daily about influence. Never was there a place so full of quiet memories, of peaceful talks, and rare opportunities for sweet friendships as that warm-coloured Parthenon with its big, open fire, and Socrates and Minerva looking down upon it.

There were no women Professors at Boston—we scorned the idea of having even one introduced into our beloved Faculty. At times some one of the Trustees would urge that a woman be added to the staff of instructors; it would reach our ears, and we would rise in open rebellion, and wax indignant at the mere suggestion. We had a dear old Greek Professor, a man who had grown old in the service of the college, who loved us girls in a deeply sympathetic way that made him our confidante. And I am sure there was not one of us but what would have gone more willingly and gladly to him with our trials and perplexities than to any woman. And when we were in need of a chaperone there was always one of our Professor's wives who was at our service. In this connection I must speak of what was, and is to me, the choicest part of my University life—the leaves in memory I love best to turn over—my daily, hourly contact with the grand men whom I had the privilege of calling my professors, and friends. For many of us were allowed to cross the threshold of merely formal meeting in the class room, and were admitted into their hearts and homes. As I look back now over those four years of happy life, I feel that the influence of those noble

men on my life and character was worth more than all the learning I absorbed from books and lectures. Life, its duties, its beauties, became to me a sweeter and better and holier thing because of my love and reverence for my good and gracious Dean, my magnificently gifted and sympathetic Professor of Philosophy, my cultured and charming Latin Professor, and my dear old Greek benefactor. As in all colleges, the Greek Letter Fraternities made up a large part of real college life, and it was there that the closest ties of ideal friendships were formed. There we learned to know ourselves and each other; there we learned to look for the good and beautiful and true in life and individuals. Everyone who has been through the same experience can realize the excitement that prevailed in the Fall term when "rushling" began. The innocence of the Freshies, the eagerness of the Sophs, the protecting care of the Juniors, and the less ardent interest of the reverend Seniors. Ah! How it all comes back to mind, and I can feel again the thrill of excitement now when the white envelopes with the irrevocable answers were in our hands. This excitement was only paralleled by the intense strain of waiting for the results of the Faculty meeting which decided the Commencement speakers. I can well remember the afternoon when I was a senior and the fate of our class was being decided. We sat on the stairs holding each other's hands, and talking with bated breath, cold chills of alternate hope and fear running up and down our backs, teeth chattering with excitement—and oh, when the final decision was dropped into our mail-box late in the afternoon—and we knew—will there ever be a day like it again?

We were especially favoured at Boston University with opportunities for social life. Receptions galore all through the year, class receptions, inter-class receptions, professors' receptions followed one another in quick succession, and there we were schooled in all the arts and graces of social intercourse.

At each class and college reception great efforts were made to surpass every other preceding "social" in striking originality, and many and various were the devices resorted to for entertainment. But the grandest social event of each year was the Klatsch Collegium given by the Gamma Delta girls every February. This was a non-secret society open to all the girls in the College, and so we were all entitled to invite a limited number of guests to this best of all the social functions. As our college is in the near vicinity of Harvard and Radcliffe, the Institute of Technology, Tufts and Wellesley, to say nothing of our own Law School and School of Theology, there were always swarms of students from the neighbouring colleges. Oh, the rapture of those grand and gay festivities, when for one whole evening each year the men so largely predominated that there was no danger of a crop of wall-flowers. But that was not all. All Boston was there, from the habitués of the old Athenæum to the quiet little type-writer and the modest seamstress, all a part of that brilliant company with its rich setting of fair faces and lovely gowns amid the music and the flowers. Then there were the evenings when we would be invited to meet some well-known literary magnate, or some learned star from beyond the seas. On all such occasions there were always good things to eat and drink, which seemed to us in our gay moods and our youthful optimism like nectar made for the gods. Then there was a very charming house on Beacon Hill presided over by a woman who was much more than a mere social leader, where we were always welcomed and where we revelled in all the delights of rare China, and art collections, soft candle-light and never-to-be-forgotten intercourse. And everywhere we met on the simple basis of hearty respect and good fellowship—faculty and students, men and women, rich and poor, brilliant and dull. Some such thing as this Boston University does. She places her students in the midst of common life, knowing well that life will be sweetened by the joys of scholarship, and that scholarly attainments are the truer, the more real and valuable in that they are woven with the ordinary round of existence. God bless and prosper her!

THE BOOKSHELF.

Herb of Grace, by ROSA NOUCHETTE CAREY: London, Messrs. Macmillan and Co.; Yokohama, Messrs. Kelly and Walsh, Ltd.

ONE always feels, after perusing a novel by Miss Rosa Nouchette Carey, that according to her reading of the riddle of life everything happens for the best in this best of all possible worlds. It is a comforting doctrine, we admit, and irresistibly appeals to the very large class for whom Miss Carey caters. But it is not true all the same. *Herb of Grace*—we fail altogether to understand the connection between the title and the story—will no doubt be read with great interest by admirers of the gentle novelist, but we must admit that it had a soporific effect upon ourselves. *Malcolm Herrick*, the hero, is altogether too perfect a specimen of humanity to convince an ordinary mind, and we fear that in real life muscular curates engaged to the most adorable of heroines do not conveniently contract consumption in order to die and so leave the heroine free to marry the other fellow after the lapse of a decent interval. For the rest the tale is pleasantly told, the atmosphere is of the middle-class of English society, and the morality and nice-thinking of even the subordinate characters are of the most irreproachable standard, so that the one villain of the piece shines out in contrast with vivid distinctness. Of the ladies in the book we like *Anna* and *Verity* best.

Fully a month before the great festival, and first of all the Xmas numbers to arrive in the Far East is the handsome special issue of the *Graphic*. As usual, it is illustrated throughout in colours, and contains a choice selection of stories by H. G. Wells, S. R. Crockett, H. B. Marriott-Watson, W. E. Norris and Amelia Pain, with a touching poem from the pen of Thomas Hardy. The stories are illustrated by such well-known artists as Seymour Lucas, R.A., G. P. Jacob-Hood, R.I., and Frank Craig, while humorous papers are provided by H. M. Brock and C. E. Brock, Tom Browne, R.I., Reginald Cleaver, Claude A. Shepperson, John Hassall and A. Guillaume. Two beautifully coloured plates are given away with the number, "The Hearth Witch," by Marie Seymour Lucas, and "In the Sunny South," by Paul Ribera.

FRENCH NOTES.

The Paris correspondent of *The Times* sends the following interesting figures to that journal:—

There are 16,000 monastic establishments in France with something like 400,000 inmates, or one to every 100 inhabitants. If to these 400,000 celibates who form the army of the Catholic Church we add the 600,000 men in the army and the 300,000 or 400,000 men and women who form the army of the civil service, we find that every 25 Frenchmen have to maintain a monk or nun, a soldier or a civil servant, or his family. Thus every citizen has to support one twenty-fifth of a member of these three categories, and as of the 40,000,000 Frenchmen only 8,000,000 at most earn or possess money, each of these 8,000,000 has to maintain one-fifth of a monk, nun, soldier, or civil servant. The cost of the soldier and civil servant appears, of course, in the Budget, but that of the monk or nun is a charge which must in some form be added to the taxation. It may be presumed, moreover, that only one-eighth of the population can be counted on as able to bear the public burdens, while there are certainly not more than 2,000,000 to face the cost of the 400,000 "religious." Thus every five persons possessing an income have to maintain a monk or nun with the proportionate share of keeping up the establishment. There is assuredly great faith in the French nation, for this heavy burden has never impaired the prosperity of these establishments nor their multiplication to such an extent that their eventual development could not be foreseen.

This has proved a bad year for the champagne vintage. Up to the end of August things looked most promising, but a violent

storm in the early part of September and many rainy days brought about rotting. Finally the grapes had to be gathered early, but during the time of gathering rain was almost continuous, and the final result is that the wine made in 1901 will not rank with that of any of the great years.

VISCOUNT WATANABE.

Viscount Watanabe, writing from Rome, seems to be impressed chiefly by the contrast between the smallness of modern Italy as compared with the greatness of ancient Rome. He says that there is nothing worthy of note in Italian administration, and that the people are in a very poor and even depraved condition.

THE "GOLIATH" SNOWDROPS.

The Snowdrops of the British battleship *Goliath* succeeded the Black Tulips on Friday night in the Public Hall, and gave a capital performance, being materially assisted by the fine band of the ship. There was a poor attendance. Following was the programme gone through:—

PART I.

Overture "Coon Land" Band.
Opening Chorus "Ole Banjo" Troupe.
1. Song "Sundown Memories" J. Marhoff.
2. Song "Poor Thing" E. Crane.
3. Song "Mountains ob de Moon" E. Morris.
4. Song "Stormy Winds" W. Debenham.
5. Song "Going back to Dixie" J. Cox.
6. Song "Delaney's Chickens" C. Slee.
7. Song "Britannia's Sons" S. Holliday.
8. Song "Sheeny Coon" W. Woolgar.
Closing Chorus "All on de Road" Troupe.

PART II.

Piccolo Solo "Captive Bird" H. Ayres.
1. Song and Dance J. Hotz.
2. Stump Speech C. Slee
Morris, E.
3. Glee Messrs. Judge, H.
Atherden, G.
4. "Then I Understood" J. Crane.
5. Recitation "Ostler Joe" T. Williams.

"THE RIVAL LOVERS."

CHARACTERS.

Kailum The Barber C. Slee.
Sippy Fritz The Rival Lover A. Middleton.
Mrs. Bunkum The Mother W. Debenham.
Miss Bunkum The Barber's Sweetheart J. Markland.

GOD SAVE THE KING.

A second performance was given by the Snowdrops of H.M.S. *Goliath* on Saturday, and again the house was small. This is much to be regretted because the purpose to which the proceeds were to be devoted was laudable, and because the show of the Snowdrops is very good. Some of the songs were capital, particularly so W. Woolgar's "Sheeny Coon," which was enthusiastically applauded. The piccolo solo "Captive Bird," by H. Ayres, was very clever; the glee by Messrs. E. Morris, H. Judge, and G. Atherden went well, and the recitation "Ostler Joe" by T. Williams was rendered with great power and quite held the audience. The "Silent Absurdity" entitled "The Rival Lovers" was side-splitting, though the violence with which the actors dumped themselves or were dumped on the stage awakened such fears for their safety as actually impaired enjoyment of the comicalities. "The Rival Lover" (A. Middleton) who was the chief character, fell from a ladder with such sheer abandon as we should be inclined to attribute to complete bonelessness. To the band and Conductor Hall, also must be given great credit, for they contributed most largely all round to the evening's entertainment.

A BYE-ELECTION of a member of the House of Peers representing the highest tax-payers of Kanagawa Ken, in succession to Mr. Hiranuma, took place in the hall of the City Council on Saturday. As was anticipated, Mr. Ishii Toranosuke was elected by seven votes; Mr. Kimura Rimon had only one vote.

THANKSGIVING DAY.

Thanksgiving Day was duly observed on Thursday in all localities throughout the world where Americans are to be found. In Yokohama services were held at the Union Church, where Rev. J. Ballagh officiated, and at Christ Church, where Rev. G. Wallace, of Tokyo, was assisted by Rev. W. T. Austen.

In the course of an address Rev. Mr. Wallace said the custom of Thanksgiving had been kept by six generations of American life in a spirit of loyalty to the principles that called it forth. And the American people looked back with thankfulness on that spirit, and upon the deeds of their forefathers who laid the deep and broad foundations of liberty, and were giants in their time. They recalled with thankfulness that the American people were enabled by the grace and help of God to come up out of great tribulation, and that now in our day there is a blessed union of brotherhood between the men of the north and the men of the south, and a thoroughly united country. And the American to-day would also give thanks to Almighty God that he belonged to the Anglo-Saxon race and that although the bond which bound the American Colonies to the throne of England was somewhat rudely broken 126 years ago, yet that the bond which unites the men of Mississippi and of Maryland with those who dwell beside the Clyde, the Thames and the Shannon is stronger to-day than ever before. On this day they had to thank God that the men of both nations were descended from those strong and sturdy men who after the breaking up of the Roman Empire settled down, became Christians and developed those principles and characteristics which made strong handed men and clean hearted women. In American as well as in English history they had had Christian men to serve the State in Congress and Parliament, in school and college, army and navy, in the farm and the factory, in all conditions and circumstances of life. There may have been some of these who were not accustomed to express in any formula the principles of their faith, but they were guided by the principles of the Ten Commandments and the Sermon on the Mount, and they acknowledged Christ as their Master and King. Yet while they thanked God for those lives given to the Anglo-Saxon race, lives of men who spoke the language of Shakespeare, of Burns, of Washington and of Lincoln, probably there never was a time in the history of the world when there was felt more deeply the need for men like that. For notwithstanding the great advance in material civilization, notwithstanding the great power of the Anglo-Saxon race, they had many dangers to confront. They had to face the danger of spreading materialism which concerned itself with the questions of what it should eat, what it should drink, and wherewithal it should be clothed. There was danger arising from over much of the pride of life; the looseness with which the marriage bond was regarded and the facility of divorce, which tended to break up the home; there was danger from the spirit of gambling which was invading both Europe and America in the domestic circle; there was danger in the looseness of Sabbath observance, danger in the ease with which in our day men and women draw the line between the satisfaction of their pleasure and the performance of the duty which they owe to Almighty God in His house of worship; danger in the fact that the farms have been deserted for the great cities and in the tendency to abandon labour and seek money and power; and certainly great danger in the dismal prospect of a time when the men of the world shall be conspicuous for their division into two great classes - those who hold that there is nothing but work and toil, and those who hold that there is nothing but pleasure, the satisfaction of their desires. They had to thank God for many things which the preacher of 100 years ago could not mention, - the many discoveries in science, in the healing art; they had to thank Him for a better understanding of the laws of clean living, for a better understanding of the other races of mankind, and for the blessed opportunities of extending the Gospel, bringing them nearer to that time when the Lord Jesus Christ shall reign for ever and ever.

There were great and glorious opportunities before them at the beginning of this twentieth century, opportunities which with God's help they should try to thoroughly and truly appreciate. To no portion of the human race did those opportunities and their corresponding responsibilities appeal with greater force and power than to the Anglo-Saxon peoples, and his closing words to them were: whether they were of American or English birth, or whatever their birth might be, whatsoever things are true, whatsoever things are open, whatsoever things are honest and of good report, if there be any virtue and any praise let them think of these things and show their thankfulness to Almighty God by doing them to the best of their ability.

FIRE ON THE BLUFF.

Fire broke out about half-past eight o'clock on Thursday morning in the house at 143, Bluff, belonging to Mr. Favre-Brandt but for some years in the occupancy of Mrs. C. G. Buchanan-Dunlop. The flames, which first started from a stove, were soon driven by the strong northerly breeze through the main building and in a very short space of time had obtained such a hold that no means available could save the place. By nine o'clock the whole house was alight, burning fiercely and casting forth such a heat that without shelter the firemen could hardly approach near enough to play upon it with the streams at their command. While it could hardly be said that there was a scarcity of water, yet the supply was almost useless for any practical purpose - except for the protection of adjoining property. There can be no doubt that but for the jets that were played upon the house of Mrs. Winfield (No. 142-C) just across the road, that building would have caught also. Indeed, at one time its walls were actually on fire. The heat from No. 143 was such as to set the trees and fence afire, however, and the supply of water dealt with these developments easily enough.

On No. 143 and the adjacent compound No. 144, also the property of Mr. Favre-Brandt, there are three wells, in two of which there were some 14 feet of water, while the third was deepened only the other day and has 26 feet of water. From other wells in the vicinity also water was obtained and pumped along by the manual engines. By half-past nine all danger of the flames spreading was passed, and half an hour later the firemen, their labours practically at an end, began reeling-up.

Five manual engines were present from the Bluff Police Station and the Bluff Branch of the Satsumacho Brigade, and men attended from the latter body under the charge of Supt. Morgan, who asks us to say a word in praise of the work done by Mr. Favre-Brandt by means of his small hand engine, manned and supplied by a large gang of *jiarukisha*-men from the adjacent stand. It was largely by this means that the house of Mrs. Winfield was saved.

Later.

It is stated that the fire started in an upstairs bed-room - probably from live coals falling out of a grate. Both house and furniture are insured. A considerable quantity of effects was removed from the building.

THE REV. S. S. SNYDER.

(COMMUNICATED.)

It is only fair to the above-named gentleman that it should be stated that the alleged case against him of which certain Sendai newspapers have made so much has been dismissed, the police not having considered that the child's parents have any grievance. What exactly occurred we have not been informed, but it is quite untrue to say that Mr. Snyder struck the little child in question with a Bible or with anything else. The whole thing is a concocted affair, and got into the Sendai papers owing to the fact that a newspaper scribbler was related to the child and thought it proper to make a little copy out of the story. The Sendai people, that is the commoner sort, were quite ready to believe the silly story, and the Tokyo

Press seldom inquires into any such matters and the falsehood has run its course. We take this occasion to point out that the lower classes in Sendai are anything but well disposed towards foreigners. Rude remarks are constantly to be heard in the streets. Little children have sometimes been interfered with and treated impolitely on their way to school. The officials of Sendai are very anxious to see foreigners treated respectfully, but until elementary school teachers and the parents of low-class children become a little more enlightened than they are in Miyagi-ken, the remains of barbarism that still exist in the minds of the vulgar will make their presence known. But after all, the insignificant provincial newspaper unfortunately has it in its power to work endless mischief in cases of this kind. But foreigners are by no means the only sufferers from such evil as the local newspaper originates. The teachers of the Second High School are repeatedly slandered in various ways. But they treat the matter with perfect indifference, remarking of the newspaper reporters: - "Poor devils! they must write something; and with a credulous public lies serve their purpose better than truth."

WRECK OF THE "NYMPHE."

The German ship *Nympe*, Captain Hilmer, which left New York on June 29th, with a cargo consisting of 84,000 cases of kerosene oil, consigned to the Standard Oil Company at Yokohama, ran ashore about two miles to the north of Rock Island at four o'clock on Thursday morning. The Captain and crew were brought to Yokohama by the N.Y.K. steamer *Saikio Maru*, Captain Young, arriving at noon on Friday. The vessel will probably prove a total loss. The passengers on the *Saikio Maru* collected three hundred and sixty yen and presented this sum to Captain Hilmer for his crew.

It appears that the German ship *Nympe*, which went ashore on Friday morning a couple of miles to the north of Rock Island, lies in an almost hopeless situation. The after part of the vessel is submerged. There was a heavy sea running when she struck and three boats were got out with considerable difficulty. It was out of the question to make a landing at that time, consequently the boats pulled out to sea and the shipwrecked crew were fortunately enabled to attract the attention of Capt. Young, of the *Saikio Maru*, which, however, had passed them before their signals were noticed. Her foremast went by the board immediately after she struck, and a big hole was made in her bottom. The *Nympe* was a fine steel vessel built at Bremen in 1892 and owned by Gildermeister and Rieff of that port.

LITERARY GOSSIP.

Max O'Rell is shortly to take up his permanent residence in Paris as a member of the editorial staff of the *Figaro*. He will continue to be the special correspondent of the *New York Journal* for the whole of Europe.

To write a book, says one of a cynical turn, is an easy task; it requires only pen and ink and some patient paper. To print a book is slightly more difficult, because genius often expresses itself in illegible manuscript. To read a book is still more difficult as one must struggle against sleep. But the most difficult task that any one may attempt is to sell a book.

President Roosevelt has contributed to the sixth volume of Mr. Laird Clowes' history of "The Royal Navy" a long and critical account of the naval operations of the war between Great Britain and the United States in 1812-15. The volume will be published shortly. The characteristic of Colonel Roosevelt's chapter is, says the *Publisher's Circular*, its unflinching impartiality in the bestowal alike of praise and of blame.

Mrs. Atherton tells us why she published "The Aristocrats" anonymously. It was to amuse herself with the American critics, the majority of

whom had "abused" her steadily since she began to publish. And for this purpose she wrote in, as an afterthought "several of the most shocking things I could concoct," anticipating that these very passages would be praised by the reviewers who had formerly "abused" her. The plan was a success.

"PRESIDENT TEDDY ROOSEVELT."

America's Teddy is fearless and free,
Statesman and ranchman and soldier is he;
Ready, resourceful, a model for grit,
Orator, pugilist, patriot, wit;
A scholar as well as a master of force,
He'll write you a book or he'll break you a horse;
Energy typified, truthful and healthy,
Full of contempt for the indolent wealthy,
Enemy stern of the Tammany set—
That is America's Teddy, you bet.
—From *Books of To-day* for October.

Harper's has a story of the venerable Dr. Thurston, who is said to be much more at home in the mazes of theology than in the amenities of social life. Not long ago he was introducing to a younger clergyman a handsome widow, a former parishioner of his own, no longer young, and extremely sensitive to the fact. "My brother," said Dr. Thurston, leading the lady forward, while his face beamed with genuine affection, "this is Mrs. Almeida Jennings, one of my old sheep."

The new Bishop of London's enthusiastic defence of Mr. Kipling as a great imperial poet at the Church Congress, remarks C. K. S. in the *Sphere*, is an interesting sign of the developments of our modern life, of a sort of harking back to paganism which those who have eyes to see and ears to hear may discover not only in the Church of England but in the Nonconformist bodies also. Mr. Kipling—wrap it up in what way he will, label himself, if indeed he does label himself, in what manner he may—is essentially a pagan—a pagan with an ever-present sense of a Deity, it is true, but none the less a pagan; and he is praised amid the applause of a Church Congress and by the bishop who reigns over the greatest of Christian cities.

Zola as a playwright, says the *Kleine Zeitung*, is quite a different man from Zola the novelist. He is delighted to see his novels and romances turned into plays; but he treats the business of dramatic translation with a very light heart, usually handing it over to some of his young friends, whose acquaintance with theatrical technique is more exact than his own. Thus his new play "La Terre," which is a dramatisation of the romance of the same title, and is to be performed at the Théâtre Antoine, is the work of his two young fervid admirers Charles Angot and Raoul de Saint-Acoman. Zola is extremely eager, however, about the scenery and accessories of the work. Hence he has had Manager Antoine and his two dramatic secretaries staying at his villa in Médan, where they have consulted together all the details.

The successful author has many ways of indicating his or her prosperity. *Munsey's Magazine* gives an interesting glimpse of Miss Bertha Runkle, who in good American phraseology has been called "the littlest girl of the literary world." Whatever may be the merits of her *Henry of Navarre* one must allow that its author is spending her money in a very healthy fashion:—

It seems that at her summer home at Onteora in the Catskills she is the most light-hearted of youthful beings, ages removed from the bluestocking, even the very modern, carefully-disguised, woman-of-the-world bluestocking of to-day. She goes about by day in a short skirt with her hair hanging in two thick braids down her back, and in the evening she is just as eager for the dances at the inn as if she had never written a line. The first thing she did with the money she received for her tale was to buy a pony and a cart, with which she drove indefatigably over the mountains. When she was obliged to come back to the city she drove in the precious vehicle to New York with her mother.

Seeing that proof is being afforded from various quarters that the influence of Dickens is once more in the ascendant, it is curious that no one present in the Westminster Coroner's-court on the

very recent occasion when the Coroner delivered himself in regard to the relation between Epsom salts and oxalic acid ventured to whisper "Pickwick!" Mr. Troutbeck "commented upon the dangerous ease with which oxalic acid might be mistaken for Epsom salts, and said that a great many deaths were due annually to this cause"; but this had been indicated very long before by a chemist, "who was a tall, thin, yellow-visaged man," when pressed unexpectedly into the jury called upon to decide the historic case of Bardell *versus* Pickwick. That unfortunate man was sworn despite his attempted protest, and he contented himself as he took his seat in the jury-box with great deliberation, with remarking, "I've left nobody but an errand-boy in my shop. He is a very nice boy, my Lord, but he is not much acquainted with drugs; and I know that the prevailing impression on his mind is that Epsom salts means oxalic acid, and syrup of senna ladanum."

A correspondent of the *Morning Post* propounds a riddle which, in a less concrete form, has puzzled ourselves considerably from time to time. He asks: "When is an author not an author? I mean: John Smith wrote an *Algebra* twenty years ago. He goes the way of all flesh, and fifteen years later James Brown revises the *Algebra*, which is still published as Smith's. Five years later, again, George Robinson re-writes the Brown-Smith *Algebra*, and Prof. Jones, F.R.S., supplies the work with a preface. Is Smith's *Algebra* still on the market as the publishers lead us to suppose? Anyone who scans an educational catalogue in almost any department of learning will admit the pertinence of this query, and we hesitate to pronounce on the morality of the practice. An analogy will, perhaps, be helpful. A man buys an umbrella; next year he has it re-covered; another time, new ribs are put in; a new stick follows next, and fresh mounts are added subsequently. Is it still the same umbrella? Zeno's paradoxes are nothing to this."

The *Saturday Review* is in rather splenetic vein when dealing with *Kim*. It says—"The reading of a long story by Mr. Kipling inspires the reflection that his proper sphere is the short story, just as the reading of his short stories often provokes a desire that he would refrain from writing altogether. This book is not altogether without merits, for the author has evidently tried very hard to feel in sympathy with the spirit of the Orient. His lama inspires our sympathy, almost our affection, and his account of the tribulations which befell two Russian spies in the Hills is graphic and exhilarating. But the book is terribly spun out and the general effect is one of intense weariness. Even the most industrious reader must nod from time to time as he plods laboriously through the pages. The illustrations are original but scarcely convincing, and we must protest against the author's irritating habit of prefacing each chapter with a piece of his own doggerel, nearly always pointless and perplexing." Well, and alackaday, there always are a superior class of superior people for whom nothing is quite superior enough.

A recent report from leading booksellers and librarians in the United States concerning the demand for various books indicates that Mr. Winston Churchill's new novel, "The Crisis," maintains the lead in popularity which a similar report made in September disclosed. Comparing the book titles in the lists for October with those appearing in the corresponding lists in September it appears that "Jack Raymond," by Voynich, "The Visits of Elizabeth," by Eleanor Glyn, and "Penelope's Irish Experiences," by Kate Douglass Wiggin, have disappeared from among the first ten in the bookdealers' report. "The Life and Death of Richard Yea-and-Nea," by Maurice Hewlett, "Cardinal's Snuff-Box," by Harland, and the "Life of Phillips Brooks," by Allen, are no longer in the first ten titles listed by the librarians. The newcomers among the first ten in the dealer's list are "Alice of Old Vincennes," by Thompson, "The Tribulations of a Princess," anonymous, and "A Sailor's Log," by Evans; and in the librarians' list "Truth

Dexter," by McCall, "The Octopus," by Norris, and "Penelope's Irish Experiences." "Tarry Thou Till I Come," "Graustark," by McCutcheon "Quincy Adams Sawyer," by Pidgin, and "A Sailor's Log" have advanced in their positions in both lists, notably the first named, which is now third as against sixth last month in the bookdealers' report, and thirteen as against twenty-first in the lists furnished by librarians.

Maxime Gorky is not the real name of the Russian novelist. It is a pseudonym signifying "the bitter one" which the author has taken to symbolise his hard life. His real name is Aleksei Maksimovitch Pieshkov. His latest novel, "Foma Gordyer," a dramatic story, is to be published shortly by Mr. Fisher Unwin.

Mr. Phil May, the caricaturist, is going on the stage, a career that has had attraction for him since his boyhood. A company has been formed, financed chiefly with the object of giving him an opportunity, and it will next month open in one of the London theatres. The first play will be "Romeo and Juliet." The leading characters Phil May will leave to others. He will make his debut as the Apothecary.

The leading organ of the medical faculty in Scandinavia, the *Nordiskt Medicinskt Archiv* recently superseded French by German as the official language for the communications and summaries of original papers, but an objection was raised by M. Ehlers, of Copenhagen, and the editing committee having stated that it was a question of economy in making the translations, the difficulty was overcome and French has been restored to the place of honour.

Of "The Skipper of Barneraig," Gabriel Setoun's latest book *Literary World* says:—"The last word has hardly been spoken by the followers of the Kailyard school while a writer can give us a story so finished in its simplicity as 'The Skipper of Barneraig.'" It is a book that we have found refreshing to read, full of a strong and simple pathos. The characters are drawn with vigour and sincerity, and there is the force and the inevitableness of the sea in the trend of these sea-folks' lives.

Mr. Rider Haggard's letters to the *Daily Express*, which appeared under the title *Back to the Land*, will not be re-issued in their present form. Mr. Haggard, however, hopes in the course of next year to publish, under the title of *Rural England*, a work dealing fully with the results of his investigations into the agricultural and social conditions of the majority of the English counties, and incorporating the substance of the letters. Messrs. Longmans will publish the volume.

Miss Mary Boyle, who was a well-known figure in London society till within the last few years, left an autobiography giving her reminiscences of Continental cities and of eminent men (Bulwer Lytton, W. Savage Landor, Edward Lord Derby, Charles Young, Benjamin Disraeli and others) who were her friends. The autobiography is edited by her nephew the late Sir Courtenay Boyle, who had almost completed the work at the time of his death last summer, when the labour was taken up by his widow. The book will be issued immediately by Mr. Murray.

Another crusade against the appearance of betting news which occupies such a large space in English papers has been instituted at Fulham, where the "blacking out" of all such news has been ordered by the Committee of the Public Library. Some of the Council are scarcely sanguine as to the practical result of this measure. *Literature* is disposed to share their doubts. It was at Aston Manor that the "blacking out" of news was first begun. There, the latest development is the refusal of the committee to allow any sectarian publications to appear in the reading-rooms.

Dr. John Watson (Ian Maclaren) is represented by two works of very different character in the winter's publishing lists. His *The Life of the*

Master is to be issued in a volume containing some of the finest examples of colour printing as yet offered to the public. The illustrations to *The Life of the Master* have been prepared by a well-known artist, who was sent specially to Palestine for the work. Dr. Watson's other book is to be issued under his pen name, "Ian Mac-laren," and is entitled *Young Barbarians*, being sketches of school boy life in a small Scottish town.

After a rather long sermon in a Liverpool church one August Sunday evening, the officiating minister gave out the number of the concluding hymn. The organist vainly attempted to produce any melody out of the organ, though he pressed the keys and pulled at the stops. There was an interval of dead silence, during which a choir-boy was dispatched to see what had happened to the organ-blower. They saw him return with more than a smile on his cherubic face. The organ played, and the congregation rose to sing, with appropriate allusion, "Christian, seek not yet repose!"

A French Catholic was discussing some literary points with an English friend, and the latter observed that in all attempts at translation from one language to the other the finer shades of meaning must necessarily be lost. "Even in ordinary cases," he said, "how difficult it is to find really equivalent expressions, and when it is a question of how to render such a thing as a play upon words the matter becomes hopeless. Take, for instance, such a quip as the famous answer to the query 'Is life worth living?—That depends on the liver!' How impossible it would be to turn that into French!" "Ah, mon ami," smiled the Catholic, "ce n'est qu'une question de foie (foi)."

To signalise the advent of the Oxford India paper Dickens, Messrs. Chapman and Hall have issued a daintily-produced little book containing notes on the life and writings of the great novelist, of whom eight portraits are given, together with facsimiles of his handwriting and autographs. There are thirty-seven other illustrations, including selections from the novels, pictures of his places of abode, and the grave in Westminster Abbey, while one specially interesting reproduction is a drawing by Mr. F. G. Kitton after Mr. Fildes's well-known "Empty Chair" Gad's Hill, Ninth of June, 1870. The booklet, although it contains nothing new to the Dickens student, is one which collectors and experts will add with pleasure to their shelves; it runs to forty-eight pages, and, as an advertisements of the really artistic sort, could not possibly be bettered.

Lord Rosebery is appalled by the reading epidemic of the day. "At present," he says, "the mere fact of holding an open book on which the eyes are fixed covers a multitude of sins. Fond parents are proud and satisfied if only they can see their children reading. A reading adult is an object of regard, a middle-aged adult is an object of veneration, but what does it all amount to? In many cases very little." In short, Lord Rosebery doubts whether its new reading furor is doing the British nation good. To answer such doubts is extremely difficult. Just as the wisest critics often fail in their judgment of living writers, so the closest observers cannot easily generalise on the tendencies of readers. Lord Rosebery's doubts may be justified if we look only on to-day, but it may be pleaded that the nation is merely doing with youthful impetuosity what it will do to-morrow with sagacity and restraint.

The uncertainties of criticism are well illustrated in the reviews of Mr. Kipling's *Kim* which have appeared. We have already given an extract from the *Saturday Review*, and we now quote two other examples. The *Spectator* says:—

"Critics who have declared that Mr. Kipling was paying forfeit for his precocity, that he could not write a long story, that he was unable to recapture the freshness of his earlier point of view in regard to India, that he was monopolised by militant Imperialism, and so forth, are one and all answered and silenced by this new and wonderful panorama of the

inner and underground life of our many-peopled Empire in the East."

Literature says:—

"*Kim* indicates that there is a danger of Mr. Kipling deteriorating at an age when he ought still to be improving; the method is still there, but the inspiration seems temporarily to have departed. . . . He writes like a man who is tired; he is not absorbed in his subject, as of old."

Not the least interesting portions of Mr. Graham Balfour's *Life of R. L. Stevenson* (just published) are the references to the literary projects that were never carried out. After the production of *Deacon Brodie* Stevenson proposed to busy himself with the following plays:—

"Honour and Arms"—Drama in Three Acts.
 "The King of Clubs"—Drama in Four Acts.
 "Peppy's Diary"—Comedy.
 "The Admirable Crichton"—Romantic Comedy in Five Acts.
 "Ajax"—Drama in Four Acts.
 "The Passing of Vanderdecken"—(Legend?) in Four Acts.
 "Farmer George"—Historical Play in Five Acts.
 "The Gunpowder Plot"—Historical Play.
 "Marcus Aurelius"—Historical Play.
 "The Atheists"—Comedy.
 "The Mother-in-Law"—Drama.
 "Madam Fate"—Drama in a Prologue and Four Acts.
 "Madam Destiny."
 "Farmer George" was to have covered the whole reign of George the Third, ending with a scene in which the mad king recovered for a while his reason.

What is an epigram? Every man will tell you that he knows one when he finds it in the pages of an up-to-date novel. But the *Author* has been trying to give a definition of the epigram, and has given up the task in despair. And if the *Author* does not know, who shall attempt the task? Interesting as a definition of the epigram might be, it would be still more exciting to meet the individual who only talks in this form of speech. Modern novelists are very disappointing from this point of view. In fact, they talk just like other people, employing common words and ordinary expressions. Their sayings are as a rule neither pointed nor antithetical when you meet them over the tea-table. And yet, give them a pen and some paper and their language, as Meredith would put it, "wears the nodding plumes of intellectual conceit." "Conceit" to us mortals who cannot even define an epigram. Still, we are willing, on the whole, that this literary fly in amber should continue to baffle and amuse us without the necessity of dissecting it.

CHICAGO UNIVERSITY.

The Annual Register of the University of Chicago for the year from July, 1900, to July, 1901, is a large volume of almost 500 folio pages, and is an object-lesson of the immensity of that wonderful institution, only about ten years old. During that year it had over 3,500 students, under several hundred teachers; and it offered such a variety of courses in every department as to make the reader's mind buzz! There is certainly no lack of opportunity for obtaining all kinds of instruction, wise or otherwise!

Japan continues to be well represented there. One course in the Department of Anthropology is given by Prof. Starr on the subject "Japan," in which "special attention is paid to industrial art and religion." Mr. Shinkishi Hatai, formerly a teacher in the First Koto Gakko, Tokyo, was a Fellow in Neurology, and assisted in laboratory work in that branch.

There were several students from Japan in attendance for one or more terms. In the list of students of the Divinity School, post-graduate, we find the names of Mr. Keiji Ashida, of Osaka, an alumnus of the Kwansei Gakuin, Kobe, Mr. Frank Naotaro Otsuka, of Tsushima; Rev. H. H. Coates and Rev. H. H. Guy, of Tokyo; Mr. Enos Hikoichi Yoshizaki, of Hiroaki; Miss Annie S. Buzzell, of Sendai; Mrs. Mattie A. Guy, of Tokyo; Mr. Suyenoshin Kawashima, of Nagasaki; Mr. Yoshi Kuno, of Tokyo. The last four, however, were "unclassified." And, among the un-

classified students of the undergraduate college proper, we find the name of Mr. Kohei Fukushima, of Tokyo, as well as that of Mr. Herbert E. Collbran, of Seoul, Korea. There may have been others; if so, we missed their names in running through the list of more than 3,500 in all.

LAW CASES.

HORNE VERSUS STONE.

Judgment was given in the Yokohama Chihō Saibansho on Friday, by Judge Matsuda, in the case of Mr. F. W. Horne, of No. 70, in the former Settlement, against Mr. W. S. Stone, of No. 77. Defendant was ordered to pay plaintiff yen 631.56 damages. As already reported, defendant refused to take delivery of six phonographs and six batteries, which plaintiff imported last year to the order of defendant.

RUSO-CHINESE BANK VERSUS MAPLES HOTEL.

In the Yokohama Chihō Saibansho on Friday afternoon, before Judge Yasuda, was heard an action brought by the Russo-Chinese Bank in the former Settlement, Yokohama, against the Maples Hotel on the Bluff, applying for a declaration of bankruptcy. Mr. Nagashima appeared for plaintiffs and Mr. Hirasawa for defendants.

Counsel for plaintiffs claimed payment of yen 3,301.89, which sum the latter owed during the period from the 12th of May, 1899, to the 30th of June this year, and also of a loan of yen 15,000. Counsel for defendants stated that his clients' assets amounted to over yen 60,400, and the liabilities, in which the sums claimed by plaintiffs are included, to over yen 52,000, thus leaving a balance of some yen 8,360. In consequence, continued Counsel, there is no reason for the Maples Hotel to be declared bankrupt. Proceedings were adjourned till Dec. 6th at 11 a.m.

PAUL SCHRAMM v. MITA KANKICHI.

In the Yokohama Chihō Saibansho on Tuesday morning, before Judge Kano, the hearing was resumed of the case, adjourned from Nov. 9th, brought by Messrs. Paul Schramm & Co., 202, Yokohama, against Mr. Mita Kankichi, of Otamachi, Nichome, claiming the payment of yen 1,335.37 for five cases of mixed woollen cloth imported last year in compliance with defendant's order.

Mr. Fujii appeared for plaintiffs and Mr. Inouye for defendant.

Mr. Kobayashi Shintaro, of No. 41, Miyazaki-cho, Yokohama, was called as a witness, and in response to questions from the bench stated that in April this year he left the service of Messrs. Paul Schramm & Co., where he had acted as interpreter and accountant. While in the firm's service he had not been approached by defendant with regard to the present action, though he remembered that plaintiffs had repeatedly asked defendant to take delivery of the goods.

Counsel for plaintiffs stated that so long as a contract existed between the parties there was reason for defendant to take delivery of the goods. Counsel for defendant replied that according to the contract payment was to be made by defendant when the latter took delivery, and it was quite out of the question that plaintiffs should claim payment before delivery of goods was effected. Defendant refused to comply with the plaintiffs' request as the articles differed from sample.

Judgment was delivered in the Yokohama Chihō Saibansho, on Thursday by Judge Kano, in the case of Messrs. Paul Schramm & Co., Yokohama, against Mr. Mita Kankichi of Otamachi.

Plaintiffs' case was dismissed with costs.

SINGER v. ENDO.

Judgment was delivered in the Yokohama Chihō Saibansho on Tuesday, by Judge Kano, in the case of the Singer Manufacturing Company, No. 56, Yokohama, versus Miss Endo Fuji, of No. 160. The appeal of the Company was dismissed with costs.

ESTATE OF LATE Mr. THOMAS WALSH.

In the Yokohama Chiho Saibansho on Wednesday morning, before Judge Yasuda, was heard an application brought by Mr. T. B. Glover, executor of the will of the late Mr. Thomas Walsh, claiming to obtain possession of property left by the deceased gentleman. The executor was represented by Mr. R. Masujima. To prove his client's right to succeed to the property, Counsel stated that the deceased, who was a native of New York, and who once resided in Sannai, Shiba, Tokyo, and died in Florence, Italy, in his will left certain deposits in the Yokohama Specie Bank, which he directed should be given to his executor.

Counsel further urged that as the Specie Bank, in which the deceased's property was deposited, was within the jurisdiction of the Yokohama Chiho Saibansho, the present case ought to be dealt with by the Court, and by way of supplementing his argument, remarked that according to American law in such cases the property of a person whose death took place at a certain place was entitled as a rule to be administered at that place. The case was adjourned *sine die*.

BOX VERSUS PETERSEN.

In the Yokohama Chiho Saibansho on Wednesday afternoon, before Judge Yasuda, the hearing was resumed in the case of a counterclaim advanced by Mr. Thomas Holyoake Box, No. 114, Yamashitacho, against the Petersen Engineering Company, No. 113.

Mr. Sato appeared for plaintiff and Messrs Yano and Harada for defendants.

Owing, however, to the necessity of examining certain documents the action was adjourned till Dec. 16th at 11 a.m.

In former stages of the case, it appeared that the Petersen Engineering Company rented premises to Mr. Box some time ago, but subsequently demanded the evacuation of the premises; which Mr. Box refused on the ground that in his lease there was no clause whereby the occupier was to be ready to evacuate the premises at a moment's notice.

BECKER AND CO. VERSUS JAPAN SEA AND LAND INSURANCE CO.

In the Yokohama Chiho Saibansho on Thursday afternoon, before Judge Kono, was heard an action brought by Messrs. Becker & Co., No. 40, Yamashita-cho, against the Japan Sea and Land Insurance Company in Higashi-ku, Osaka, claiming payment of yen 534.80 damages together with six per cent. interest per annum from the 6th of September last year till the execution of judgment, and also storage fees of yen 81.04.

Mr. Sato appeared for plaintiffs and Mr. Kitashiro for defendants.

Counsel for plaintiffs stated that some 2,006 bags of brown and white sugar amounting in value to yen 14,326 were shipped by the Teito Shokai in Anping, Formosa, to Messrs. Becker & Co. by the steamer *Bankoku Maru*, which arrived at Yokohama on Sept. 6th last year. When landed, it was found that out of the whole consignment 512 bales valued at yen 584 were damaged and from the appearance of the goods it seemed that the sugar had been subjected to the action of water during the voyage.

Counsel for defendants contended that the goods were damaged while being shipped at Anping, and that as the contract provides that goods so shipped would be free from average if damaged under 10 per cent., there was no reason for plaintiffs to make the above claim.

Counsel further asked the Court to summon as witness the Captain of the *Bankoku Maru*. The case was adjourned to either the 17th or 21st of December.

HALL VERSUS HALL.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Kano, the hearing was resumed of the suit brought by Mrs. Mary E. Hall against Dr. C. H. H. Hall, her husband, asking that he fulfil the promise agreed upon between them.

Plaintiff was represented by Mr. Akiyama and defendant by Mr. Masujima.

Counsel for plaintiff remarked that in August last year defendant promised to give plaintiff yen 5,000 and a monthly allowance of yen 100, as well as 45 shares in the Grand Hotel Co., Ltd., should plaintiff agree to a divorce.

Counsel for defendant stated that though the husband and wife had a talk with regard to the proposed separation yet no agreement was made as to the exact amount of the allowance. For some reason or other the parties had not lived together since then, and in order to support herself plaintiff was now engaged in giving lessons in the French language and has at present some 20 pupils, who pay monthly tuition fees of yen 10 each.

Mr. McIlvor, formerly United States Consul-General in Yokohama, was called as a witness and gave evidence with regard to the law of divorce in America. He deposed that according to the law of the State of Illinois when a husband acts violently towards his wife so as to injure her health, etc., then he has no right to press her to cohabit with him; but so long as his behavior does not prove dangerous in any way he may rightly insist upon the woman living in marital relations with him. The witness further said that when the present dispute arose he tried his best to settle the matter amicably, but without result, and he only indistinctly remembered the fact that 45 shares in the Grand Hotel Company would be given to plaintiff, if the latter agreed to the defendant's proposal.

After inquiries from the bench, Counsel for plaintiff asked the Court to summon Mr. Denison, of the Foreign Office, as a witness and this was acceded to. Proceedings were then adjourned. Mr. J. de Becker acted as Interpreter.

NEWS OF THE WEEK.

Dr. Goto, Chief of the Formosa Civil Administration Office, arrived at Shimbashi on Friday from Formosa.

During the snow storm in the north on Nov. 24th two steamers and a junk were wrecked off Mutsu province.

Some 60,000 boxes of the well-known Kishu oranges were brought into Yokohama a few days ago—the first of the season's crop.

Mr. J. B. Ames, one of the oldest residents at Bangkok, Chief of Police there from 1864 to 1890, died there on the 29th ult. He was close on 70 years old.

News has been received that with the exception of the Nihon Sekiyu Kaisha (Japan Kerosene Company) all the other kerosene establishments in Echigo have been bought out by the Standard Oil Company.

In Hongkong harbour in November, there were twenty-eight British warships, of all kinds, carrying 193 guns, and representing in the aggregate a tonnage of 77,209, and indicated horse-power of 156,230.

We note that according to Reuter, M. Zeimis has been entrusted with the duty of forming a Greek Cabinet. M. Zeimis was Minister of Justice and (temporarily) of the Interior in the Delyannis Cabinet of 1891.

The following telegram, dated London, 21st Nov., is translated by the *Kobe Herald* from a Kobe vernacular journal:—A political crisis has arisen in Servia and it is reported that an attempt has been made to assassinate Queen Draga.

On Nov. 24th, members of the Yokohama Traders' Guild carried out a long distance race between Yokohama and Kawasaki, a distance of 11 miles. One of the successful runners is said to have covered the distance in one hour 20 minutes.

The Department of Agriculture and Commerce is reported to have received a communication from Belgium to the effect that the highest award

has been given to some Japanese articles exhibited in the International Marine Products Exhibition now open at Brussels.

News to hand says that Marquis Ito and party left Paris on Nov. 20th for Berlin where they arrived the following day. After remaining at the German capital for several days they will proceed to Russia.

The body of the chief bar-tender of the Hongkong Hotel, Joseph Daniel Richards, was found on Nov. 21 in an empty laundry tank situated between the old and new buildings, and forty feet below his bed-room window. The police are investigating the mystery.

As the result of a court-martial recently held at the Sasebo Admiralty, it was announced on Nov. 11th that Captain Torinosu, who was in command of No. 47 torpedo-boat when she stranded on the 12th of July last year on the occasion of her trial trip, has been sentenced to undergo minor imprisonment for five days.

Saturday's football game was not very interesting, being too one-sided even for a pick-up contest. The White team scored four goals, three of which were kicked by Strome, who played a very good game at centre; while Cartwright scored the only goal made by the Red contingent.

In connection with the proposed opening of a Sugar Bureau in South Formosa next year, the Formosan Government will shortly dispatch several officials to Hawaii for the purpose of inspecting the sugar industry there. It may be added that the Island Authorities have asked the Treasury for an appropriation of yen 149,000 for the next fiscal year in order to carry on the undertaking.

Mr. Nakahashi, President of the Osaka Shosen Kaisha, arrived at Nagasaki on Nov. 25th from Shanghai, whither he had proceeded for the purpose of inspecting the company's business on the Yangtze. While there, he said that the Shanghai branch would be opened on Dec. 1st and that in point of cargo and number of passengers the company occupied third rank among the various Powers whose steamers are plying on that great river.

At a special meeting of the Narita Railway Company held on Nov. 24th a resolution was passed that Mr. Ogura, President of the Company, should be persuaded to resign; that a sum of over yen 38,000 spent by the Company for various purposes should be made good by Mr. Ogura, and that the shareholders be asked to pay a call of yen 2½ per share in February next. The company will convene a special general meeting on Dec. 4th when the above resolutions will be discussed.

Several days ago, the Italian Minister in Tokyo sent a note to Mr. Ikariyama, Chief of the Kagachō Police Station, Yokohama, through the Kanagawa Prefectural Office to the effect that the Italian Consulate was prevented from catching fire on the occasion of the destruction of the Oriental Hotel by the prompt steps taken by Mr. Ikariyama, who also so directed his subordinates that important documents kept in the Consulate were all taken to a place of safety.

According to the *Genealogical Magazine*, Henry Edward Marie Taaffe, Viscount Taaffe of Corren, in the Peerage of Ireland, claims the right to vote at the elections of representative Peers for Ireland, although an Austrian subject. The Lord Chancellor is considering the claim. The family of Taaffe has been long settled in Austria. Lord Fairfax, of Philadelphia, U.S.A., is also taking steps to prove his right to his Peerage.

Following the example set by the *Jiji Shimpō*, under whose auspices a long distance race was recently held on the former racecourse at Uyenō Park, the *Osaka Mainichi Shimbun* will carry out a long distance race on Dec. 15th at the town of Sakai. It is interesting to learn in this connection that the people of Osaka and the neighbour-

ing districts entertain an idea of promoting a race between the Tokyo and Osaka champions some time next year at either Tokyo or Osaka, and that the Japanese residents and natives of Korea have likewise proposed to send representatives to the second race organized by the *Jiji*.

Close on the heels of the news that the drivers in charge of the Odawara Electric Railway went on strike the other day comes information that a number of workmen employed by the company struck work on the evening of Nov. 24th, the result being that business was partially interrupted. Having disregarded the advice of the police several ringleaders were arrested.

The value of coal exported from Moji, Nagasaki, Shimomoseki and Kuchinotsu during the first half of November amounted to over yen 348,000, the total for this year reaching over yen 14,044,000. Rice imported into Yokohama, Kobe, Osaka, Nagasaki, Moji and Shimomoseki during the first half of the current month is valued at over 84,000; making a total of over yen 10,849,000.

It is interesting to read in a Tokyo journal that recently Admiral Dewey sent a note of thanks to Mr. Sakurai Masatsuku, of Arakimachi, Yotsuya, Tokyo, to the effect that a sword presented by the latter gentleman had been duly received by the Admiral through Dr. George H. Chiltern (?) and that the blade was one of the finest the gallant officer had ever seen. He added that the present would be treated as one of the treasures of his family. It may be mentioned that Mr. Sakurai is a great admirer of the ancient methods of Japanese swordsmiths and is doing all he can to revive them.

With a view to adjusting the national finances, the Japanese Government is reported to have resolved not to grant subsidies to various undertakings and establishments from the next fiscal year, and a bill to that effect will be brought up in the coming session of the Imperial Diet for approval. In this connection, Tokyo papers say that with the exception of the Nippon Yusen Kaisha, the Nippon Railway Company, and the Soul-Fusan Railway Company, with which enterprises the Government has already entered into agreements granting subsidies for a certain period of years, all concerns will cease to receive grants.

The cricket match between Shanghai and the Straits concluded at Hongkong on Nov. 16th and was won by Shanghai by a leg-bye. The Straits, as already reported, had made 105 first innings and 230 in the second, Shanghai scoring 192 in the first innings and having thus only 109 to make to win. In the second innings Shanghai scored 110 for nine wickets, the last ball being a leg-bye. In the Hongkong-Shanghai match the former made 230 in the first and 157 in the second innings, Shanghai scoring 239 in the first and 149 in the second innings, winning by seven wickets. In Swimming, V. Lanning (Shanghai) beat the Hongkong champion, Alves, easily. In Golf, McMurtrey for Hongkong beat Mann for Shanghai by eight. In the Lawn Tennis Singles, Shanghai v. the Straits, Ramsay beat Green 6 to 6, 7 to 5, 7 to 5, 6 to 3.

The *Kobe Herald* on Friday announced that advices had been received by Messrs. Jardine, Matheson, & Co., of the death of Mr. C. Z. Ede, of their Shanghai office. Death was due to peritonitis. As an enthusiastic yachtsman Mr. Ede took a leading part in organizing the Kobe Canoe and Dinghy Club and also in the Kobe Yacht Club during its comparatively short existence. While in Kobe, too, he rendered good service on several occasions in watching and advancing the interests of more than one local institution, setting an example of public-spiritedness which established a claim to the gratitude of all who have the well-being of that town at heart. Mr. Ede left Japan for a run home about three years ago, and on returning was appointed to the Shanghai office of Messrs. Jardine, Matheson and Co. He was not more than thirty-seven years of age.

CHINA AND THE SOUTH.

The death took place on Nov. 9th of Mgr. Van Camelbecke, Bishop of Eastern Cochin-China.

Within a period of eight days the native guard shot two magnificent tigers in the outskirts of the town of Sontai in Tongking.

Sir Henry Blake, Governor of Hongkong, laid the foundation stone of the Tung Wah Infectious Diseases Hospital at Hongkong on Nov. 18th.

The Singapore Municipal loan of \$1,000,000 at 5 per cent. was oversubscribed and allotments were made at rates varying from 1½ to 4½ per cent. premium.

H.M. cruiser *Cressy* arrived at Singapore on the morning of Nov. 16th. The *Cressy* is a new armoured cruiser of 12,000 tons displacement and 21 knots' speed.

Hongkong is threatened with a water famine. There is no prospect of rain. On half supply the colony may go on till May; on full supply not longer than February.

3822 rates were destroyed and paid for by the Sanitary Department in Hongkong during October. The total number from 1st January to 31st October is 66,478.

Hongkong papers state that the U.S. Commission in the Philippines is determined to adopt more aggressive measures towards treason, rebellion, and sedition in the Archipelago.

A new illustrated magazine, *East of Asia*, to be issued jointly by the *N.-C. Daily News* and the *Ostasiatische Lloyd* is announced. There will be an English and a German edition and the first number will appear in December.

Rear-Admiral Grenfell arrived at Hongkong on Nov. 8th. from England in the P. and O. steamer *Ballaarat* to succeed Admiral Sir James Bruce. About 5 p.m. he went on board his flagship, *Barfleur* on which his flag was hoisted, when he was saluted by the men of-war in port.

The *Singapore Free Press* says:—Admiral of the Fleet Sir Henry Keppel will arrive in Singapore by the steamer *Chusan* about the 19th November. It is more his affection for the well-known scenes of his earlier years than dislike of the rigours of an English winter that brings the genial old Admiral out again to this place.

Sir Ernest Satow left Shanghai on Nov. 19th in H.M.S. *Handy* for Woosung, where he would join the *Talbot*, which takes him to Nanking. Thence he goes in the *Britomart* to Hankow. On his return Sir Ernest will go direct through Woosung to the north, without calling at Shanghai.

The eldest son and heir of the chief Prince of the powerful league of Khakha Mongols, Na Yen-t'u, arrived at Shanghai from the North on Nov. 16th accompanied by a modest suite, with the intention of visiting the various Treaty ports along the maritime coast, after which it is quite possible that the young Mongol Prince will visit Japan—as a trial trip. If the tour pleases him the Prince will go to Europe for his Grand Tour in the spring of next year.

An Imperial Decree issued at Kaifong on Nov. 14th, administered the following rebuke: "We were handed this morning a memorial from one Wang Lien, a formerly cashiered Provincial Treasurer. Within this memorial were many sentences contrary to etiquette and lacking in the respect and reverence due to the Throne. We now command that, from henceforth, cashiered officials shall not be permitted to present memorials to the Throne any more."

The Chair of Chinese Language and Literature at the St. Petersburg University has been filled by the appointment of M. Popov, late Consul-General and First Dragoman of the Russian Mission at Peking. The chair has been long vacant, as Russia, in spite of her long commercial connection

with China, extending over centuries, was unable to supply a single savant who was sufficiently acquainted with the Chinese language, and for some time the few students who took any interest in the subject had to rely on the occasional services of a subordinate member of the Chinese Embassy in Russia.

A Chinan, capital of Shantung, official dispatch published in Shanghai on Nov. 20th stated that, having failed in obtaining the permission of the Throne to refuse the Viceroyalty of Chihli, H.E. Yuan Shih-k'ai has issued instructions to his personal staff, who are to follow H.E. to Chihli, to be ready to leave Chinan for Peking on the 21st inst. The likeliest place where Viceroy-designate Yuan Shih-k'ai will take over his seals of office is Peking—not Paoting—as the acting Viceroy, the Provincial Treasurer Chou Fu, is at the former city, having been summoned there upon the death of the late Li Hung-chang.

The death of Mr. Lawrence Miall, second son of Professor L. C. Miall, of the Yorkshire College, Leeds, occurred on 5th September whilst travelling between Singapore and the Red Sea. Mr. Miall, who was only 23 years of age, was a young gentleman of considerable promise. After studying at the Yorkshire College, and taking the B.Sc. degree of Victoria University, he went to St. John's, Cambridge, but had to relinquish further study on account of failing eyesight. He came out to China as a newspaper correspondent in connexion with the Boxer troubles and was for some months on the staff of the *N.-C. Daily News*.

It is stated that the late President of the Board of Punishments, Hsueh Yun-sheng, was connected almost all his life with that Board, having begun his official life as a 3rd-class secretary of that Board and finally rising to the highest position in it. Hsueh Yun-sheng was during his lifetime considered the standard authority on Chinese law, which he doubtless deserved, and for many years had been engaged on "A Commentary on the Laws of the Ta Ts'ing (the pre-Manchu) dynasty," consisting of some eighty odd volumes, which will undoubtedly be considered the standard law commentary of the country. It is stated that the late President had just completed a supplementary volume when he died.

A reception was given on Nov. 18th on board the Osaka Shosen Kaisha steamer *Tachang Maru*, which is intended to ply on the Yangtze river, where there are now five of the company's steamers engaged. Various speeches were delivered in the course of which it was stated that the ship was built of steel and was laid down in the Mitsu Bishi yard at Nagasaki on the 3rd of August, 1900. Her dimensions are: length between perpendiculars, 283 feet; beam, 39 feet 6 inches; breadth of upper deck, 48 feet; draught, 12 feet 4 inches. Her gross and net tonnage are 2,712 and 1,681 respectively, and her indicated horse power 2,200. With a boiler pressure of 180 lbs. her average speed is 12 knots, and on her trial trip, with forced draught, she developed a speed of 13.3 knots. She is a twin-screw steamer and her engines are of the triple expansion, surface condensing type.

AMERICAN TOPICS.

The result of the New York and San Francisco elections for Mayor is an unqualified victory for the cause of clean government. In the former city Mr. Seth Low, the citizens' candidate, who was opposed by Tammany, was returned by a plurality of 30,000 votes, while in San Francisco, Mr. Eugene F. Schmitz, the Union Labour representative, was elected by 14,591 votes against 12,256 given for Mr. Asa R. Wells, Republican, and 8,646 for Mr. J. S. Tobin, Democrat.

General Luke E. Wright, the member of the Philippine Commission who has been appointed Vice-Governor of the islands to take the place of the Governor in case the latter is incapacitated, is a veteran of the Civil War, 54 years old, and was a distinguished member of the Tennessee Bar before going to the Philippines in the early part

of last year, and one of the best-known lawyers through all the South. He was educated at the University of Mississippi and entered the Confederate Army at an early age, serving as a private throughout the war. General Wright has been a life-long Democrat and was a delegate to the national conventions of 1876 and 1884.

The overthrow of Tammany Hall has seemingly aroused a feeling of almost national exultation in the States. Messrs Low and Jerome are in perfect harmony, and the general opinion is that New York is on the verge of a political house-cleaning such as the great municipality has never known before. Complete unofficial returns from Greater York give Mr. Seth Low for Mayor 294,902 and New Mr. Edward M. Shepard (D.) 265,128, making Low's plurality 29,864. E. M. Grout, fusionist candidate for Controller, received 299,713 votes, and William Ladd, Democrat, 254,738, making the plurality of the fusionist 44,976. Unofficial returns from every election district in New York country give William Travers Jerome, fusionist, a lead of 15,880 over Henry W. Unger (D.) in the race for the District Attorneyship. The vote of the two was:—Jerome 163,999; Unger, 148,079.

A table prepared by the Director of the U.S. Mint shows that the coinage of gold for the world during the last calendar year was \$354,936,497, a decrease from \$466,110,614 for the preceding year. The coinage of silver was \$177,011,902, an increase over the preceding year of \$10,884,938. The coinage of gold and silver for the principal countries for the years 1899 and 1900 was as follows:—

	GOLD.	
	1899.	1900.
United States.....	\$111,244,220	\$99,272,943
Great Britain.....	43,852,085	63,766,609
Russia	194,481,077	83,221,525
Germany	33,628,453	34,680,396
	SILVER.	
	1899.	1900.
United States.....	\$26,061,520	\$36,345,371
Great Britain.....	7,910,885	10,107,818
Russia	20,967,769	3,496,971
Germany	4,346,302	5,645,281

President Hutin, of the Panama Canal Company has finally submitted to Admiral Walker, the head of the Isthmian Canal Commission, a proposition on behalf of his company for the acquisition of all its rights by the United States Government. The Panama Company has been restrained up to this moment from submitting a direct proposition owing to a clause in the concession which it holds from the Government of Colombia, which prescribes forfeiture of the concession as a penalty for the making of an effort by the company to transfer its rights to another Government. The company's agents there have been obliged to act with extreme caution in making overtures, but in some way the Colombian Government has been induced to wink at this technical violation of the concession. Its terms are not yet disclosed and it is probable that they will not be until the Isthmian Canal Commission publishes its report. It is understood, however, that they are considerably more favourable to the U.S. Government than were the figures made to the President three years ago.

According to *Leslie's Monthly*, maxinite, recently adopted by the U.S. Government, has satisfactorily stood every test to which it has been subjected. It is very inexpensive of manufacture, has a fusion point below the temperature of boiling water, cannot be exploded from ignition, and, indeed, cannot be heated hot enough to explode, for it will boil away like water without exploding. It is, therefore, perfectly safe to melt over an open fire for filling projectiles, in the same manner that asphalt is melted in a street cauldron. Should the material by any chance catch fire it would simply burn away like asphalt, without exploding. When cast into shells it not only solidifies into a dense, hard, incompressible mass on cooling, but it expands and sets hard upon the walls of the projectile, like sulphur. That is to say, it expands in the same way as water does

in freezing. When a shell filled with it strikes armour-plate the maxinite does not shift a particle, and it so insensitive that it not only stands the shock of penetration of the thickest armour-plate which the shell itself can go through, but it will not explode, even if the projectile breaks upon the plate.

Lieut.-General Miles has adopted the following arrangements for sending troops to the Philippines to replace the four regiments of short-term men which are to be brought home within the next few months: Two battalions of the Twenty-eighth Infantry to sail from San Francisco on the *Grant* on the 15th Nov.; one battalion of the Twenty-eighth Infantry to sail from San Francisco on the *Harren* December 1st; a squadron of the Eleventh Cavalry to sail from San Francisco about December 15th, on a transport not yet selected; a squadron of the Eleventh Cavalry, stationed at Fort Ethan Allen, Vermont, to sail from New York on the *Crook* about December 1st, and a squadron of the Eleventh Cavalry, stationed at Fort Myer, Virginia, to sail from New York on the *Buford* January 15th. In addition to these troops it is proposed also to send a large number of recruits for the purpose of filling the quotas of depleted regiments in the Philippines. The Eleventh Cavalry and the Twenty-eighth Infantry aggregate about 2400 men, and the present plan is to send out with them about the same number of recruits, thus providing nearly 5000 fresh soldiers for the relief of those coming home.

The majority report of the U.S. Naval Board, headed by Rear-Admiral Taylor, which has prepared plans for the proposed new naval station at Olongapo, P.I., shows that the station may cost the Government \$19,359,500, exclusive of defensive works, signal stations, water supply, coaling station, magazines, hospital, encampment grounds and a native village under the control of the naval authorities, which it is proposed to provide for the workmen who will be employed regularly at the Olongapo dock-yards. The board recommends that, in addition to the four prominent points selected for the defensive works by Admiral Remey's board—Silanguin islands, at the entrance of Port Silanguin; the point on the west side of the entrance to Subig bay; Grandee island, at the mid-entrance, and Point Ilian, on the east side of Subig bay entrance—that another fort be located to protect the landing in Calaguaquin bay, on the west coast of Zambeles province, and that the mountain passes leading to the naval reservation on the north and east be fortified. The board's estimate for equipping the station for the efficient work of repairing and outfitting vessels, pending general development, is \$12,903,500. The report concludes with a statement that much of the material for the station must come from the United States, though a good part of it can be obtained at Hongkong.

Judge Kohlsaat, of the United States Circuit Court for the Northern District of Illinois, recently granted an injunction to prevent certain strikers from interfering with the property or the employees of a manufacturing company by establishing pickets about the premises of the company and by attempts at intimidation. In the case before him (*Allis-Chalmers Company vs. Reliable Lodge et al.*), reported in the *Chicago Legal News*, Judge Kohlsaat laid down the following doctrine as to the limits of the rights of workmen: "It is the undoubted right of workmen to quit work severally or in a body so long as the act does not come within the rule against conspiracies to injure the property of another. They may also use peaceable means in persuading others to join them in carrying out the strike subject to the above rule. Both of these rights, however, must be exercised in such a manner as not to otherwise interfere with the right of every man to run his own business in his own way, provided he keeps within the law in so doing, or the right of every man to work or not to work, to strike or not to strike, to join a union or not, as he thinks best. In other words, a man may decide his own course and hold himself to certain rules, but he can not impose those rules or that course upon the conduct of any other man

against his wish any more than he can place fetters upon his hands or shackles upon his feet. And when, as in the case at bar, the attempt is made through intimidation and acts of violence to effect this end it is tyranny of the most despotic character—it is civil war—it is treason to the principles of this and almost every other Government."

In the revised figures of Government receipts for the last fiscal year, as given in the annual report of the Treasurer of the United States, there is a slight increase as compared with the amount given out at the close of the fiscal year. The revised statistics give a total of \$587,685,337 for receipts and \$509,967,353 for expenditures, showing an excess of receipts amounting to \$77,717,984. The receipts for the current fiscal year keep well in excess of the expenditures. A surplus of over \$9,300,000 is shown for the month of October. For the first four months of the current fiscal year the receipts amounted to \$191,980,841 and the expenditures to \$164,499,824 showing an excess of receipts amounting to \$27,481,017. If this rate should be kept up during the remainder of the fiscal year, it will be seen, the surplus of the last fiscal year would be exceeded by that for the current one. It is evident, therefore, that the problem of the surplus is one that must be dealt with in the near future. Meanwhile Mr. Secretary Gage, who has been observing the situation of the Treasury with attention, has decided to relieve the drain on the circulation involved in the piling up of the surplus. With this object in view he has announced a resumption of the purchase of bonds on terms substantially the same as those offered under the last call. The bonds are to be accepted at prices to yield the Government interest as follows, namely, on the 3 per cent. bonds of 1908-1918, 5 per cent. bonds of 1904 and 4 per cent. bonds of 1907 to yield 1.726, and on the 4 per cents of 1925 to yield 1.906. Mr. Gage, in explanation of this step, remarks *Bradstreets*, says that the circulation of the country could not long stand the drain resulting from the rolling up of the surplus without being seriously affected, and he has resolved to liberate some of the Government cash holdings by means of bond purchases, instead of increasing the deposits in the national bank depositaries. The offer is made subject to withdrawal without previous notice.

There was an intensely dramatic scene in the Cathedral of the Holy Name, Chicago, on Nov. 2nd, when, in the presence of fully 1,000 parishioners, Jeremiah J. Crowley, an excommunicated Roman Catholic priest, was publicly humiliated by order of the authorities of the church. Father Crowley had entered the church unobserved, passing up the centre aisle, and had taken a seat almost under the pulpit. Solemn high mass was being celebrated at the time. When the presence of Father Crowley became known Rev. Francis J. Barry, chancellor of the archdiocese of Chicago, was hurriedly sent for. Upon entering the cathedral he went straight to the seat where the excommunicated clergyman was kneeling and ordered him to leave the church. Father Crowley refused to go, saying:—"Put me out if you dare!" The strain was intense, and one woman in the congregation fainted. There was no resort to force, however. Chancellor Barry signalled to a man in the choir loft and the sound of the organ ceased and the singing of the choir was hushed. The priests on the altar stopped the solemn service at the end of the Gloria, and walked to the benches and laid aside their golden vestments. Then the altar boys marched out of the sanctuary through a side door and the priests, clad in their cassocks, followed. The next moment the hundreds of incandescent lights in the vaulted arches were extinguished and the candlelights on the altar were put out. The strain was broken when Chancellor Barry appeared in the pulpit and said:—"Owing to the presence in this sacred edifice of an excommunicated priest solemn high mass has been suspended. We will proceed with low mass." No sermon was delivered, however, and the mass was at an end before the congregation was calm again. The parishioners lingered around the cathedral and watched the deposed priest as he hurried away. None spoke to him.

EUROPEAN NOTES.

A Marseilles fish wife has gained the great lottery prize of £8,000.

The Academy of Science (says the *Paris Figaro*) has published some alarming statistics of the ravages caused in France by the abuse of absinthe, which is said to have been responsible for 15,000 crimes or misdemeanours, 16,000 cases of lunacy, 1,800 suicides, and 30,000 cases of tuberculosis.

Twelve thousand native oysters from the Pye-fleet estuary of the Colne were ordered for the annual oyster feast at Colchester this year. Among the guests were the Minister of Agriculture (the Right Hon. R. W. Hanbury, M.P.), Gen. Sir William Gatacre, Capt. Sycamore (of the *Shamrock*), and the Lord Mayor of London.

The *chef* of the late Empress Frederick, who served at Cronberg in that capacity for five years, has been summoned to Berlin, where he will enter the service of the Kaiser. Paul Garlin, who is a Frenchman, had the good fortune (says the *Figaro*) to earn a high eulogium from King Edward VII. on the occasion of the fêtes organised by the Prince de Sagan.

It appears that Musolino, the Italian brigand, whose capture has caused so much excitement in Rome, is young both in years and in the time spent as a bandit, although it is declared that some forty persons have fallen victims to his cruelty. Three years ago, when he was but twenty-three, he quarrelled with a man and was tried for murder, and sentenced to a long term of imprisonment.

A London builder, who has paid insurance premiums for 40 years, and whose premises were recently destroyed by fire, sent in his claim to the insurance company for £7,500. The company offered him £6,000 to settle the matter. "No," replied the builder, "when I take a ticket to Brighton, I don't expect to have to get out at East Croydon." This businesslike metaphor had its effect.

A notice from the Inland Revenue authorities was recently sent to Major Rasch, M.P., informing him that his son, Lieut. Rasch, had not renewed his gun licence. A characteristic reply was sent by the Major as follows:—"Woodhill, Danbury, Essex.—Sir, The gentleman in question is using a gun in South Africa, for which, oddly enough, no licence is required.—Yours faithfully, (Signed) Fred. Cane Rasch.

Governor Grey, in his annual report of the Falkland Islands, remarks that during the year six ships put into port in distress. Of these, a Chilean vessel had a cargo of coke and sulphuric acid carried in iron drums. The acid had eaten through the drums, and consequently it all leaked out. The drums were packed in chalk, and the sulphuric acid acting chemically on this, formed carbonic acid gas. During the voyage the hatches blew off. Eventually most of the acid remained at the bottom of the ship, and damaged the iron frames so seriously that she could not continue her voyage.

News has arrived of the death of a gallant young officer, Captain Basil Culverhouse de Gex, of the Lancashire Fusiliers, who has succumbed to injuries inflicted by a lion while out hunting. Captain de Gex was specially detailed for duty with the Uganda Punitive Force, and had been engaged in the campaign against the Mad Mullah. He was in his twenty-ninth year, and joined the East Lancashire Regiment in January, 1893, became Lieutenant three years later, and was promoted to Captain in the Lancashire Fusiliers in June of last year. He served with the Chitral Relief Force, and received the medal and clasp.

Formerly prison life in Scotland was sometimes a free-and-easy arrangement, as is recalled by a chaplain in an article in the *People's Friend*. A new Inspector of Prisons had been appointed, and on arriving at his first destination, a prison on the western seaboard of Scotland, he inquired

of the solitary warder as to whether the Governor was within. "No, sir," said the warder, "he's away fishing." "Oh, indeed," said the inspector. "Well, I'll see the prisoners." "There is only one, sir," returned the warder. "Very well, let me see him." "Him! He's out, sir." "Out? The prisoner out? Has he escaped?" "Oh, no, sir; he's with the Governor at the fishing carrying the bag."

The annual revision of the War Fund stored up in the Julius Tower at Spandau has just taken place. The fund (says the *Daily News* Berlin correspondent) consists of a sum of six million pounds in coined gold, and there it has been lying, without earning a penny of interest, since 1874. During the long interval, taking the customary rate of interest at 3½ per cent, an equal sum has been lost in this way. The gold is contained in 1,200 cases, each containing £5,000, and the chests are kept in vaults, the walls of which are several yards thick. Three heavy doors lead into them, and six different keys are necessary to unlock them. Day and night a military patrol guards the Tower in the centre of the Citadel, which is surrounded by the River Havel. The vault itself can only be entered by the Revision Commission.

If wheat-growing is to become a lost industry in England, it will not be the fault of the British farmer. All manner of practical experiments are being carried out, with a view to discover, if possible, some way of escape from the impending doom. The latest effort in Cheshire had for its object to ascertain whether the imported small, hard grain which millers are compelled to mix with English wheat, to suit the taste for white bread, cannot be grown in England. To decide this question, half an acre was sown with English square-head wheat, and an equal area with Kansas seed, the two plots receiving exactly the same treatment. Unfortunately, the outcome of this interesting experiment will not bring much comfort to our agriculturists. The Kansas sowing yielded very little both in grain and straw than the hard-head wheat did, and even if the former, after being ground into flour, fetches a slightly higher price per bushel, that gain will not compensate for the loss in bulk. It is possible, however, that better results may attend similar experiments with other foreign wheats, or that British consumers may swing round to a preference for the slightly tinted bread with which their fore-fathers were perfectly satisfied. It is quite as nutritious, more easy of digestion when properly baked, has the true wheaten flavour, and should be a little cheaper. In Yorkshire, where most cottagers bake their own bread, very little foreign wheat is used.

Sir William Gatacre, when distributing prizes to the Colchester Rifle Club, made some very interesting remarks. He referred to the advantages that would accrue to both rifle clubs and to the Government if the clubs were made into reserve companies for Volunteers, and he suggested that they would be excellent institutions for men who were able to give up a certain amount of time to practising rifle shooting, but who could not afford the time necessary to become ordinary Volunteers, and he also suggested that such clubs should have Government support. He maintained that such a system would provide a most valuable nucleus of sharpshooters to assist the Army in repelling invasion. Such clubs, he said, would be of great value as a deterrent force, but would have to be organised as a fighting unit. The danger of giving an undue and fictitious importance to these rifle clubs is, however, a matter for serious consideration, remarks the *Globe*. However good a shot a man may be, without proper discipline he loses his proper fighting value. It is unwise to point to the Boers as a case in point of an undisciplined force being able to hold in check a large army of disciplined troops. For, in the first place, the country in South Africa is very different to what we have at home, and secondly, had the Boers been properly disciplined and been able to take due advantage of the many opportunities given them, it is extremely doubtful if the British would hold the commanding position in South Africa

that they do at present. Undisciplined valour is an excellent thing, no doubt, but it must eventually break down when opposed by steady discipline and determination.

CORRESPONDENCE.

AN UNSEEMLY INCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I be permitted to mention, and to give publicity to, an incident which occurred yesterday near the Azabu Church, at the funeral of the late Mrs. Meacham? There were quite a number of friends present at the service, and they had formed into line in the roadway outside the church, and started for the Aoyama Cemetery. The procession had proceeded but a little way when the voices of a betto and running footman were heard, shouting and calling to clear the way, and a carriage was driven through the line of friends, and the procession broken up near the Azabu Church. There are several turnings very near together, and the hearse and pall bearers had turned out into the main road; but in addition to having broken through the procession lower down, the running footman passed a second time between the friends, spreading his hands and shouting to clear the way, and the carriage was again driven through the procession, this time actually in the immediate rear of the hearse, thus cutting off the hearse and pall-bearers from the entire line of following friends, and the pall bearers on the right side had to press up close to the hearse to avoid being struck, and even then the wheels of the carriage almost brushed against their coat sleeves.

I will make no comment upon this unseemly incident, leaving the matter to the judgement of your readers; but I will say that the calling and shouting and deliberate breaking up of a funeral procession into three sections, by twice passing through its ranks, and cutting off the hearse and pall bearers, made up an incident which created a very painful impression. If it had been a foreigner who had done this we should never have heard the last of it. The carriage was evidently that of a personage of some rank, as quite a number of retainers in *jinrikisha* were following in attendance, and the funeral procession was disorganised and had to pause in order to allow the friends to dress up into line before proceeding on their way to the Aoyama Cemetery.

I am, Sir, yours very truly,

FRANCIS STANILAND.

WILL ADAMS' GRAVE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your leading article of to-day you allude to "Dr. Riess' conclusion that Will Adams died at Hirado, and that the strong probability is that he was buried there also." You point to the difficulty of accounting for the existence of his tomb at Hemi, unless he was actually buried there. For your first proposition is: "It seems to us rational and reasonable to conclude that where his sepulchre stands there also lies his dust." You may be quite sure that nobody doubts the soundness of such a commonplace proposition in the abstract. The question is only whether there are not exceptions to this rule and whether Adams' "grave" is not one of them. Now you need only go to the beautifully situated cemetery at the back of Ueno Park and, among the thousands of graves, find those of Mr. Ramsay and Dr. Geerts. Both are well kept, and the inscriptions on the tombstones run:—

- (1) "In Memory of G. E. O. Ramsay
Master Mariner
This Stone is erected by his Pupils
In Token of Esteem and Admiration
for his Sterling Qualities."
- (2) "In loving and grateful Remembrance
of
Dr. A. F. C. Geerts
Born at Oudendyk, Holland.
The Meritorious Promoter
of
Pharmacy and Hygiene in Japan
Who died at Yokohama 30th August 1883.
Erected by his Japanese Pupils and Friends."

I am quite convinced that every foreign visitor who reads these inscriptions will be quite sure that the remains of these two gentlemen must have found their resting places underneath. However there are still people living who were present when Mr. Ramsay was buried at Yokohama cemetery, while the same may be easily attested about Dr. Geerts' funeral who has left a family in Yokohama. In Aoyama cemetery you may also find an inscription in honour of Kim Yoku, the Korean, who was murdered in Shanghai more than 7 years ago. These instances may suffice to prove, that in a

country where cenotaphs are used as places of worship and memory, your apparently self-evident proposition, "that where his sepulchre stands... there also lies his dust," is by no means of reliable strength.

That Adams died at, or very close to, Hirado, I think is an unavoidable conclusion for everyone who knows the evidence brought forth on this point. Only six days after his death (May 22nd, 1620) Richard Cocks and William Eaton, having been made executors of his estate, drew up an inventory of his possessions at Hirado. If Adams had died at Hemimura, it would have taken thirty days for the sorrowful news to reach them. Besides on the first occasion offered, Cocks took Adams' *katana* and *wakizashi* to his son Joseph (Dec. 29th, 1621); "where were tears shed at delivery." The fact of this handing over the most precious parts of Adams' personal apparel so long after his death and the impression caused thereby throw much light upon the problem of Adams' place of death.

You say: "Surely if he died at Hirado, there could not have been any sufficient reason for carrying his remains to Hemi and interring them there." I quite agree with you on this point, but in my essay in the Transactions of the Asiatic Society I have tried to prove that there was even no possibility of conveying the remains of Adams from the harbour of Hirado to Hemimura for many months after his death.

Not the dust of Will Adams but his memory is, in my opinion, connected with the monument at Hemimura.

I have the honour to be yours truly,

LUDWIG RIESS.

(Of course that is all very reasonable, but how are we to account for the tomb at Hemimura? By whom was it erected? If some light could be thrown upon that point, a conclusion could be speedily reached.—Ed. J. M.)

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have dropped a line out of my letter on "Will Adams' grave." It should run thus "...at Hirado, and that Adams died May 22nd 1620. But *Needson had died in March of the same year presumably at Hirado...*" The words underlined have been omitted in your printing of my letter.

Yours very faithfully,

ARMINE T. KING.

11, Sakae-cho, Shiba, Tokyo, Nov. 22nd, 1901.

TRAIN ROBBERIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg of you to be kind enough to publish the following in your paper for the benefit of future foreigners travelling by train in the vicinity of Yokohama and Tokyo, and also if possible, to bring to the notice of the Japanese authorities the systematic robberies which are taking place on the railways in those neighbourhoods.

On Monday, 11th November, I was returning from Nikko to Yokohama by the 8.40 a.m. train and had with me an English leather kit-bag which was locked, also a wicker Japanese basket which was also locked. Both of these articles were placed in the brake van. On arrival at my hotel at Yokohama I found that three things had been extracted from the basket, and that the kit-bag had received so severe a wrench that it was almost impossible to undo it. The articles were not of much value except a coloured silk regimental sash, a thing which is hard to replace in the East and which one does not care for others to get hold of. I wrote to the authorities about the matter, but having been away from Yokohama cannot say whether any reply has come or not. However, I think by giving publicity to this letter, future travellers to or from Nikko will be chary about putting articles of value in brake vans.

Yours faithfully,

A BRITISH OFFICER.

November 23rd, 1901.

P.S.—I should have said in the above that I have since heard of two or three cases similar to mine and occurring between the same places.

PROFESSOR VIRCHOW'S EIGHTIETH BIRTHDAY.

(FROM "THE TIMES" CORRESPONDENT.)

Berlin, Oct. 13.

The anniversary now being celebrated in Berlin is one which is calculated to impress the whole civilized world. Since the death of Goethe there has probably been no date in the history of the German intellectual world which makes a stronger appeal to the gratitude, the admiration, and the devotion of mankind than this, on which Rudolf Virchow completes the 80th year of his laborious and beneficent life. What took place in Berlin yesterday was

calculated to bring home to the most ignorant and apathetic the immense debt which humanity, in spite of modern cooperation or modern specialism, still owes to the genius and to the labours of individuals who are gifted far beyond their fellow-men in respect of character and talents. The history of Professor Virchow's life and work forms one of the grandest illustrations of the triumph achieved over every obstacle by genius manifested in infinite labour and guided by absolute love of truth and by dauntless courage. The annals of British science can fortunately in our times exhibit instances of similar labours, and comparable achievements in the same or in other fields.

Yet the history of Professor Virchow's life is almost unique in the spectacle which it affords of a great pioneer of science, who, as he broke new ground, was able not only to see the fruits of his labours applied for the benefit of his country-men and of the world, but was himself privileged to construct and superintend the scientific, the political, and the municipal machinery by which the practical benefit of his achievements was placed at the service of humanity. Yesterday, on the eve of his birthday, men of all German parties were engaged in paying tributes to the life-work of Professor Virchow as the foremost representative of modern medical science, as the benefactor of his country and of the world, and as the dauntless political and municipal reformer.

The history of Professor Virchow's life, from his birth in 1821 as the son of a small shopkeeper and farmer in the village of Schievelbein, Pomerania, has often been told. Till the age of 13 he was educated at the *Volksschule* of his native village; at 17 he passed his "leaving examination" at the Gymnasium Köslin, and immediately afterwards proceeded to Berlin to study medicine. He graduated as doctor in 1843, and became assistant-professor at the Berlin Charity Hospital. In the spring of 1848 he was the junior member of a Government Commission sent to investigate an epidemic of typhus caused by famine among the handloom weavers of the Silesian highlands, and the result of his studies, which he embodied in a brilliant and impassioned report, gave a permanent direction both to his scientific and to his political career. He became a life-long student of pathology and an ardent German Democrat. His political attitude in 1848-49 led to his expulsion from his Berlin chair. He accepted a call to the University of Würzburg, and there he did some of the most brilliant work of his whole life, gathered round him a coterie of gifted fellow workers, and raised the little University into the front rank of medical schools. It was during his sojourn at Würzburg that he laid the foundations of his cellular system of pathology—*omnis cellula a cellula*—by which he speedily supplanted the previous orthodox theory of *hæmatopathology*. In 1839 Schleiden and Schwann had demonstrated the applicability of the new theory of cells to animal and vegetable life; Virchow proved its truth in the case of the human organism, and thus laid the foundations of modern medical science. The rise and development of the study of bacteriology associated with the name of Pasteur and Koch seemed at first to portend a conflict between the new science and the cellular system of Virchow. But the whole medical world has now realized that the two spheres of investigation supplement each other and that, whatever bacteria may be the *cause causantes* of disease, disease itself is a particular state of the cells of which the human organism is composed. Since his triumphant recall to the Berlin University in 1856 Professor Virchow has continued the demonstration and application of his theory by innumerable practical experiments; and as a kind of *paragon*, which nevertheless, as he himself has pointed out, bears directly upon the main subject of his work, he has entirely revolutionized the study of anthropology. The amount of material which he has collected in the form of printed records and microscopic preparations for the purposes of pathological demonstration is altogether unprecedented. His latest achievement has been the erection and the superintendence of the magnificent Pathological Museum near the Berlin Charity Hospital, where the first part of yesterday's ceremonies in his honour took place.

It is impossible here to do more than indicate the mere outlines of Professor Virchow's activity as a Parliamentarian and a municipal councillor. In the Prussian Chamber, to which he has belonged as a member of the Freisinnige, or Radical, party since 1861, he was for 25 years Chairman of the Committee on Finance (Rechnungs Commission), and to a very great extent he laid the foundations of the constitutional Prussian Budget system. In the Reichstag he represented a Berlin constituency from 1880 to 1893, when the Social Democracy characteristically ousted him. His controversies with Bismarck, who once challenged him to a duel, are fresh in the recollection of all students of the great Chancellor's biography. But it was perhaps in the Berlin Municipal Council, to which Professor Virchow has belonged for 42 years, that the practical beneficence of his public activity bore the most striking

fruits. It is chiefly due to him that Berlin, which was formerly one of the most unhealthy, has now become one of the healthiest cities of the world. It was he whose elaborate studies and constant advocacy secured for Berlin the construction of an admirable system of sewage and sewage farms, as well as the provision of an ample supply of pure water. The hospitals of the German capital, which are a model for the world, bear in every feature traces of his initiative and influence. Berlin, which owes more to him in this respect than to any other of its living citizens, has marked its sense of its obligations by deciding to bestow his name upon the vast new hospital now being erected by the city.

RECEPTION AND LECTURE AT THE PATHOLOGICAL INSTITUTE.

The proceedings of yesterday began with a reception in the new Pathological Institute. Professor Virchow is averse to any excess of ceremony, and the official programme was preceded by the somewhat informal presentation to the hero of the day of his bust in marble, which will be a permanent ornament of the Institute. Around Professor Virchow were gathered the Minister of Education, Herr Studt; the Chief of the Imperial Chancellery, representing Count von Bülow; the Foreign Secretary, Baron von Richthofen; the Secretary of State for the Interior, Count Posadowsky; the Prussian Minister of Commerce, Herr Möller; and the Minister of Communications, Herr von Thienen. There were also present the General Staff Surgeon of the Army, Dr. von Leuthold; the Chief Burgomaster of Berlin, Herr Kirschner; the President of the Berlin Municipal Council, and life-long friend of Professor Virchow, Dr. Langerhans; and a large number of the leading representatives of German and foreign medical science. The Minister of Education, Dr. Studt, addressing Professor Virchow, expressed the pleasure and pride with which the assembly congratulated the hale octogenarian in the midst of his own incomparable pathological collection, and said that the name of Virchow would remain to all time associated with this achievement. But it was desirable that future generations should possess a likeness of the founder of the Institute, and that this likeness should find a place in the halls of the Institute. On behalf of the Ministry of Education, he presented the marble bust of Professor Virchow to the founder and director of the Institute as a token of their gratitude and with the expression of the desire that the Institute might ever be animated by the spirit of its great author. Professor Virchow expressed his thanks in a few simple and cordial words which were very warmly received. But, as usual, the eager yet self-composed little man, with the parchment-like skin and the keen blue eyes behind his big spectacles, had practical work in view and was impatient to be at it.

Upstairs a large audience composed of the Berlin scientific world and of delegates from abroad was waiting in the auditorium to hear him lecture. When the cheers with which he was greeted on his arrival had subsided, he promptly proceeded to deliver what was neither more nor less than a luminous and concise review of the history of pathology and a practical sketch of the scope and objects of the Berlin Pathological Institute. Without once mentioning the unrivalled part which he himself had played in the reformation of pathological study, he traced the historical development of pathology and illustrated its present position by the collection of preparations in the institute. Especially noteworthy were the following words on the subject of tuberculosis as manifested in the disease of phthisis:—

"The preparations teach us that the tubercle as a general rule, unless it undergoes calcification, is a dead substance, and as such is expelled from the body. This usually happens by the formation of sores or ulcerations. The tuberculous sore is a 'defect' which can never be replaced by regeneration. It may heal, but there remains a permanent imperfection, since even the scar of the wound supplies no substitute in the form of serviceable tissue. The hopes entertained of healing the tubercle by the reabsorption of its substance are in the main false; the process of healing mainly begins by destruction or mortification. Neither of these processes excludes the possibility that a scar on a *capsula* may be formed as a connecting issue, but neither the one nor the other furnishes tissue which is capable of discharging its proper functions. It may happen, however, that, when the tubercle is destroyed or the *capsula* has scaled off, the process of the disease may be arrested if no live bacilli remain. The Pathological Museum shows how these processes assume forms which can be recognized."

Professor Virchow then dealt with the necessity, sometimes forgotten, for distinguishing between the cause of disease and its nature. He showed by illustrations taken from cases of kidney disease how a partial cure—*sanatio incompleta*—was in many cases the only aim which the physician could practically follow; but he gathered comfort from the large number of methods of "collateral compensation" which the human organism had at its disposal. In conclu-

sion Professor Virchow claimed that the Berlin Pathological Institute with its museum helped to furnish a strong argument for the claim which he had advanced in his address when he was admitted to the membership of the Royal Society in London. This claim was that pathology had now earned a place among the biological sciences, and he "might now say with confidence that the future of medicine was secured, if the connexion between clinical practice and the facts of pathological anatomy and experimental pathology were maintained unbroken."

The distinguished audience was delighted by the vigour and clearness with which their octogenarian teacher delivered his address. There followed a most interesting demonstration by magic lantern slides of the bacilli of tuberculosis, influenza, cholera, and typhoid. Professor Virchow then conducted his guests to the microscope room, where Professors Koch and Lönner showed microscopic preparations of the bacilli of malaria. The illustrious host was assisted by a large number of his most distinguished pupils, and the labours of the morning were exhausting enough to make the luncheon which he offered his guests a very welcome interlude.

BANQUET.

In the evening there was a semi-private dinner of the German scientific friends of Virchow, the most distinguished of the foreign guests, and the representatives of the Government. The banquet, at which Professor Virchow, who was accompanied by his wife and the members of his family, was present as the guest of honour, took place at 6 o'clock in one of the spacious lobbies of the new home of the Prussian Diet. Count Posadowsky, the Imperial Home Secretary, proposed the German Emperor's health, and Dr. Koerte, Professor Virchow's oldest friend, proposed the toast of the evening. Director Alteoff, of the Ministry of Education, presented the octogenarian professor with his portrait at the age of seven and with his school leaving-certificate. Opposite Professor Virchow sat "the Little Excellency" and great painter, Professor Adolf von Menzel, who is himself well over 80 years of age.

PRESENTATION OF ADDRESSES.

At 8 p.m. the chief function of the day, the presentation of addresses by German and foreign delegations began in the hall which is the meeting-place of the Prussian Chamber of Deputies. The body of the House and the galleries were crowded, and the proceedings lasted till long after midnight. Professor Waldeyer presided, and conducted Professor Virchow to the platform amid loud and long-continued cheers. The chairman began by reading a list of the vice-presidents of the committee. Among these was the name of Lord Lister, which was received with a great demonstration of applause. The committee, Professor Waldeyer intimated, had already collected a sum of 50,000 marks, which was to be further augmented by subscriptions from admirers, friends and former pupils of Professor Virchow, and would ultimately be devoted to the "Virchow Fund" for the promotion of scientific research. After dealing eloquently with the services of Professor Virchow to his country and to the world, the chairman called on the vast assembly to join in cheers for the hero of the day. These were enthusiastically given, and again and again renewed.

LETTER FROM THE EMPEROR.

The long list of congratulatory addresses from the Imperial and Prussian State authorities, the Prussian Chamber, the Municipality of Berlin, and the Universities and scientific and learned societies of all nations, was opened by the Prussian Minister of Education, Dr. Sudt, who read the following letter from the German Emperor:—

"On this day, on which it is vouchsafed you by the grace of God to complete the 80th year of your life in bodily and mental vigour, I express to you my most warm congratulations and my desires for your welfare. Medical science owes to the indefatigable labour of your long life researches which are of fundamental importance, and which have opened new ranges of vision. By these researches your name has been engraved for all time in broad letters on the tablets of the history of medicine, and it is honoured far beyond the confines of the German Fatherland. But more than this—with unwearied beneficence in time of war and in time of peace you have placed your medical skill and experience at the service of mankind, and have ever been their faithful physician and helper. As a token of my gratitude and my recognition of your distinguished labours I have to-day conferred upon you the Grand Gold Medal for Science, and I rejoice to send it to you herewith on this your day of honour. William I.R."

Messages were also read from Duke Johann Albrecht of Mecklenburg and from the Imperial Chancellor, Count von Bülow, who wrote that "often in foreign lands he had had occasion to rejoice with pride in the fame of one of our greatest pioneers of science." In presenting the address of the Municipality of Berlin the chairman of the Municipal

Council, Dr. Langerhans, intimated that the city had contributed 100,000 marks to the "Virchow Fund."

Among the foreign delegates were Signor Bacelli, Italian Minister of Commerce, and M. Cornil, of the French Senate, as well as distinguished representatives of science from Russia, Austria, Denmark, Norway and Sweden, Switzerland, and other countries.

LORD LISTER'S SPEECH.

Great Britain was represented by Lord Lister, who wore the Prussian Order *Aur de Mérite*; Sir Felix Semon, on behalf of the Royal College of Physicians; Mr. Howard March (Royal College of Surgeons); Dr. Rose Bradford (University of London and Royal Medical and Chirurgical Society); Mr. Watson Cheyne (Pathological Society of London); Professor Muir (University of London); and Dr. Graham Brown (Royal College of Physicians of Edinburgh). I append *verbatim* reports of the brief speeches of Lord Lister, who spoke in English and was received with a remarkable demonstration of welcome, and of Sir Felix Semon. Lord Lister said:—

"Revered master, I am here as a delegate of the Royal Society of London, of which you are an honoured member, and on behalf of which I have been also requested to hand you addresses from six other societies which greatly regret that it has been impossible for them to send special delegates. They are as follows:—(1) The Anthropological Section of the British Association for the Advancement of Science; (2) the University of London; (3) the University of Edinburgh; (4) the Faculty of Physicians and Surgeons of Glasgow; (5) the Medical and Chirurgical Society of Edinburgh; (6) the Royal Academy of Medicine of Ireland. All these bodies join in recognition of your gigantic intellectual powers, in gratitude for the great benefits that you have conferred upon humanity, and in admiration of your personal character, your absolute uprightness, the courage which has enabled you always to advocate what you believed to be the cause of truth, liberty, and justice, and the genial nature which has won for you the love of all who know you. The astonishing vigour which you displayed in the address to which we listened to-day justifies the hope that, when many of us your juniors shall have been removed from this scene of labour, it may be granted to you to celebrate your 90th birthday not only in health and honour but in continued activity in the service of mankind."

Sir Felix Semon, speaking in German, said:—

"The reason why I should have been selected, dear Master, to convey to you the sincere congratulations of the Royal College of Physicians is of a two-fold nature. In the first place the authorities thought that it might be welcome to you if the good wishes of the college were conveyed by an old and faithful pupil, who little dreamed when he sat at your feet 30 years ago as a young German student that he would to-day have the honour of representing the ancient college in whose name he has the honour of speaking. A second reason for selecting a native of Germany as the representative of the college on this auspicious occasion was that they thus wished to emphasize the old scientific brother-hood-in-arms which has so long united German and British science, and to express thereby their sincere gratitude for the beneficial influence you have exercised no less upon English than upon German science."

I need hardly add that most journals of all shades of political opinion unite in paying tributes to Professor Virchow and to the greatness of his lifework. But as a curiosity of contemporary history and as an evidence of the virulence of party feeling and of modern obscurantism in Germany I may mention that the reactionary *Kreuzzeitung*, the opponent and detractor of Professor Virchow, only devoted some ten lines last night to these national and international celebrations, describing them as mainly a glorification of Professor Virchow as a party man, and quoting with puerile and ignorant derision some of the tributes of respect which have been bestowed upon the octogenarian hero in the campaign of scientific and political progress. There are verily two Germanies, and the intellectual life of one of them appears to be still under the shadow of the Dark Ages.—*The Times*.

MURDEROUS PUBLICATIONS & AMERICAN LAW.

Washington, Sept. 17.

As one watched the long string of mourners passing with unmistakable grief by the body of the murdered President one was tempted to ask whether this crime which has appalled the world may not be made an instrument of good.

In the last 40 years there have been only seven men elected as Presidents of the United States, and of these seven three have been the victims of assassins. It is not surprising, therefore, that this last act should have given rise to proposals for stringent legislation against murderous associations and murderous publications in the United States.

Should it prove possible to devise new measures efficacious in curbing either, which shall not be incompatible with the principles of civil liberty and freedom of discussion as these are understood and cherished by all English-speaking peoples, they will be hailed with deep and general satisfaction by civilized mankind.

Something, I trust, may be accomplished in this direction by well-considered laws, but the difficulties in the way of framing such laws are great and obvious. If they offend the feelings or conflict with the habits of considerable sections of the population, they fail of their effect by creating sympathy with the class of criminals at whom they are aimed. If, on the other hand, they are not drastic enough to assure the punishment of the guilty, they but tend to increase the confidence of the conspirators in their own strength and in the impotence of civilization to repress them.

While hoping that it may be possible so to amend the law as to strengthen the hands of the police in the detection and the prevention of murderous plots, without infringing on the just liberties of any order of citizens, I venture to think that our best prospect of bringing the contrivers of such schemes and their accomplices to justice lies rather in the systematic enforcement of the laws we have than in the enactment of any fresh statutes.

The English law arms the Executive with ample powers for the punishment of conspiracy to murder, incitement to murder, and similar offences, wherever witness and juries can be relied upon to do their duty. The law of most of the States of the American Union is in essentials, and in many non-essentials, based upon our own, and I shall be surprised if it is less well adapted to procure convictions for such crimes upon sufficient evidence.

Unfortunately that law has been so rarely enforced that the apostles of certain kinds of assassination have been encouraged by a long impunity to look upon it as a dead letter. So long as this continues to be the case it is worse than useless to cumber the Statute-book with fresh legislation. New preventive and penal enactments will not overawe the criminals while the authorities flinch from the application, without fear or favour, of the common law and of the enactments which exist. It is weak and foolish to utter new threats while the salutary menaces of the present law remain idle. It is vain to whet the edge of the sword while the ruler who bears the sword shrinks from becoming a terror to evildoers because the evildoers control votes.

That he has so shrunk in the past and that public opinion has condoned his inaction, we Englishmen have bitter reason to know, for no section of the assassination Press of different nationalities which is conducted on American territory has been more active or more successful in the propagation of crime than that which has systematically advocated a warfare of murder, dynamite outrages, and arson against England. Tens of thousands of dollars have been openly collected and acknowledged in its columns for purposes which can hardly be legal by the laws of any Christian community. I may instance the "Skirmishing Fund," raised avowedly "to lay the big cities of England in ashes"; the fund raised for the families of those among the murderers of Lord Frederick Cavendish and Mr. Burke who died without expressing repentance for their crime; and the fund raised for "spreading the light," of the gospel of murder among the Irish in the United Kingdom.

No legal action seems ever to have been taken, or even contemplated, by the American authorities against the men who collected this money, and who hailed the successful dynamiters as patriots and heroes.

The most casual examination of recent numbers of these journals shows that they are as ready as ever to preach a fresh campaign prosecuted by the old methods, on the first opportunity, and some of them seem to think that the opportunity has come. The reunion of the Irish party and the restoration of the Land League under a new *alias* have filled them with hope. The old dynamiters have been busy founding branches of the United Irish League, and the old dynamite Press has spoken out.

The first clear utterance brought to my notice dates back to last March, when the founder of the "Skirmishing Fund" repeated his old exhortations to his readers, flavoured, as usual, with pious references to the Almighty—"the God of harmony and peace." An Irish war against England was, he admitted, inadvisable. He continued:—

But, if Ireland is not able to put an equipped army in the field or a fleet on the sea, she can strike England in other ways. Why not apply the torch in England? Why not lay London and other English cities in ashes? John Daly, perhaps, and the standing army generals may think this mode of attack immoral. The *Irish World* doesn't think it is immoral. What is war in its results? Is it not taking human life and destruction of property? Is not Kitchener at this hour applying the torch in Africa?

Mr. Davitt landed in New York last month on his eighteenth visit to this country. Amongst those waiting to receive him were the founder of the "Skirmishing Fund" and publisher of this article—to whose paper he promptly gave an "interview"—together with "ex-Minister Patrick Egan" and "Hon. John Finerty." Mr. Egan is still remembered as the ex-treasurer of the Land League who fled to America on the arrest of the Phoenix Park murders in 1883. Mr. Finerty's name is less familiar to Englishmen, though I believe it was mentioned pretty often in the proceedings before the Parnell Commission. He is well known in Irish-American circles here as one of the loudest and most active of the "extreme men" out West. In his paper and on the platform he has advocated, in the crudest and bluntest language, a "war" of outrage against England. He has publicly lamented that dynamite has not wrought more havoc in London, and he has publicly glorified resort to the dagger of the murderer.

In the "interview" Mr. Davitt is represented as declaring that "no man prominently identified with the United League is in any way hostile to what is known as 'extreme' Nationalism"; that "the League has fifty times more extreme men in its ranks than there is in bodies outside of it"; that if men who cannot conscientiously support that organization "work on their own lines" "no friend of the United Irish League will oppose, or obstruct, or even object to such work"; that he himself believes "in both moral force and physical force in their time and opportunities," and that "there is no irreconcilable antagonism between the two."

On August 15, in a speech made to the "United Irish Societies" of Chicago, called to order by the "Hon. John Finerty," according to the report before me, he repeated that "the United Irish League antagonizes no Nationalist principle, however extreme." But two days later he was obliged to declare that there was one scheme he could not support. At Milwaukee he boldly said that "he was not in favour of burning London or Liverpool or Manchester," and that he would not do so even in war. "It is not in this way," he justly observed, "that we can get the support of America." This was too much for the author of the "Skirmishing Fund." In his issue of August 24—only thirteen days before the murder of Mr. McKinley—he rebukes Mr. Davitt for this lapse from the principle of toleration for all methods of Nationalist work, and warns him not to "raise difficulties." He says:—

With reference to the torch as an instrument in war with England, and the sentiment regarding it among Irishmen, we feel quite sure he misjudges his countrymen in the United States. We mean, of course, Irishmen who are in earnest, and not the dude element. In Land League days and at other times, those Irishmen who were ever ready with their dollars were the men who were most anxious to see illuminated London. Those men were not ruffians. They were not Anarchists. They were honest, hardworking, upright, manly men. They believed in God, in law, and in justice. . . . they thought also, if Irishmen were denied the use of instruments of regular warfare so-called, that they were perfectly justified in resorting to irregular war; and in that opinion the *Irish World* shares.

I have quoted these passages to show Americans that the conspiracies and the newspapers which have organized and preached murderous crime against us, still subsist in the United States, and that they show ominous signs of renewed activity. I want law-abiding American citizens, whatever their sentiments towards England, to face this fact. I want them to ask themselves whether the existence of these conspiracies and newspapers, naked and unashamed in their States and cities, is or is not a blot upon their civilization and their moral character as a people. I want them to judge themselves, whether such toleration would be honourable or legitimate even if those campaigns were directed against a hostile nation with whom the United States were engaged in actual war. I want them to put themselves in our place and to reflect coolly and without passion, how they would feel and how they would act, were we to tolerate under any pretext, campaigns of crime against them such as they have long tolerated against us. I want them to consider how they can hope with reason to repress murderous plots and murderous publications of one kind while they make no effort to repress murderous plots and murderous publications of another.

What would Americans think, what would they say and do, if acts of the character I have described were committed, and words of the kind I have quoted were uttered, in England openly and ostentatiously, against their fellow-citizens, their Government, and their institutions; if these acts and words were followed by a series of foul crimes perpetrated in America largely by British subjects, and if the British Government took no steps to punish the authors of such deeds or the preachers of such doctrines?

What would be their feelings towards us if British newspapers were publicly to raise funds for the legal defence of the murderer of Mr. McKinley, and for the benefit of the murderer's family—if he died

stanch? What, if an Englishman were to murder the chief witness on whose evidence Czolgosz had been convicted, and British assassination journals were to collect money for the defence and for a monument to this "hero martyr's" memory?

What would they say, if we admitted to citizenship a supposed accomplice of the assassin of the President, who had fled from American jurisdiction, and if we presently sent him to represent the honour of our country in the diplomatic service? What if we elected and nominated avowed sympathizers with crime to positions of public trust? Would they accept regard for the liberties of the subject as a sufficient pretext for our indifference? Would they deem the necessities of party men, the convenience of wire-pullers, and the hostility of "anti-American" sentiment an excuse, or would they reject such a plea with honest scorn, and tell those who proffered it that they must choose between their attitude of benevolent neutrality towards crime and the friendship of the people against whom that crime was publicly preached and notoriously organized from British soil?

I have not much doubt as to the answer. I am confident the masses of the American people would long since have given the same answer in our case, as they would expect and require in their own, had they realized what the facts of that case are. I know well they are unconscious that these loathsome incitements to outrage are published in their midst. They know nothing of the wretches who live by urging others to murder and to arson. They are ignorant of the conspiracies against a friendly nation which are hatched with impunity under their jurisdiction, and of the kind of "warfare" the conspirators wage. But many of the politicians—some, I fear, of the statesmen—of the United States cannot be ignorant of these things. It is incredible that representations should not have been made to Washington from London on this subject. They must have known something of the antecedents and the connexions of the men concerned in these conspiracies whom they found it convenient, not merely to tolerate, but to reward.

I cannot but believe that after the awful domestic proof they have had that murderous publications and murderous associations lead to murder, they will in future look upon both with other minds, and that the awakened conscience of the nation will save them, should they need to be saved, from any danger of relapse.

The eyes of America have been opened, the mind and heart of America have been stirred. She gazes with horror and with shame at this canker in her midst. The sense of duty and the sense of self-preservation urge her to combat it. I think she will combat it with the quiet and dogged determination of her sons. I think the American people are resolute that henceforth no man, or body of men, shall contrive, or preach, or palliate murder amongst them and call it "politics."

If, unhappily, I am wrong; should the machine-men and wire-pullers, who find the party services of the preachers of assassination useful, prevail against the wishes of the people, men who know the human heart will not wonder when the spirit which those preachers conjure again finds American votaries and American victims on American soil. No local habitation, no territorial confines can be assigned to the spirit of murder. If Americans, through indifference, or from reluctance to offend the "owners" of certain votes, suffer murder to be advocated as a remedy for real or imaginary wrongs in other lands, malcontents and fanatics will be found to apply that remedy, even without express exhortation, to what offends them in the constitution of society in the United States. They will argue, as Czolgosz has argued, that to shoot "tyrants" in New York State is as laudable and as heroic as to blow up "tyrants" at St. Petersburg or at Westminster, to stab them at Dublin or in Lyons, to shoot them in a Spanish village or in an Italian town. And to this argument there is no answer.—*The Times*.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE BRITISH ARMY.

Shanghai, Nov. 22.
It is stated that one method which the War Office proposes for the purpose of increasing the strength of the British Army is to raise new militia battalions.

THE HAGUE COUNCIL.

The Council of Arbitration at The Hague has decided that it is not competent to deal with the Boer appeal for arbitration.

ANGLO-GERMAN RELATIONS.

Mr. Chamberlain's reference to the Franco-

German war, in a speech delivered in Edinburgh, has produced an extraordinary outburst of Anglophobia in Germany. The semi-official *Norddeutsche Zeitung*, commenting on the speech, describes the agitation as justifiable resentment on account of Mr. Chamberlain's inconsiderate and offensive words.

ANGLO-GERMAN RELATIONS.

Shanghai, Nov. 23.

The British papers comment on the seriousness of the German agitation. *The Times* reminds Germans that we claim an equal right to defend the honour of our gallant soldiers, and that we resent accusations founded on the most hateful and poisonous calumnies and disseminated with a persistence inexplicable in a friendly nation.

HEAVY DEFALCATION IN LIVERPOOL.

Shanghai, Nov. 24.

The Bank of Liverpool announces defalcation by an absconding book-keeper amounting to £170,000, but the stability of the bank is not affected.

BRITISH MANUFACTURERS AND JAPAN.

The Times urges the necessity of worthy representation of British manufacturers at the Osaka Exhibition in 1903, as the trade with Japan is now as important as that with China.

SOUTH AFRICA.

Canada's offer to raise 600 more mounted infantry has been accepted. Eighty men of Ackermann's commando have been captured in the Orange Colony.

OBITUARY.

Count Hatzfeldt, German Ambassador at the Court of St. James.

ARTILLERY LEAVING SOUTH AFRICA.

Three field batteries are returning to India from South Africa.

FANATICAL OUTBREAK IN ATHENS.

There has been an extraordinary fanatical outbreak of students in Athens against the proposed translation of the Gospels into modern Greek. This is regarded by the students as profanation. They attacked the newspapers that recommend the translation, and afterwards they retired to the University, whence they fired on the troops and police surrounding the place. Seven were killed and thirty wounded on both sides.

GERMANY AND ENGLAND.

Shanghai, Nov. 25.

The German press has resumed its normal tone, although Anglo-phobe demonstrations continue, and the pastors throughout the country deliver Anglo-phobe homilies.

THE TROUBLE IN ATHENS.

Athens is quieter, but the cavalry still occupy the streets. The Greek Cabinet has resigned.

SOUTH AFRICA.

Commandant Buys has been captured after attacking a patrol of 100 railway pioneers near Villiersdorp. Major Fisher was killed and two officers wounded. Some prisoners were taken by the Boers and the Boers lost ten.

(This is obscure. The exact words are: "Commandant Buys captured after attacking patrol hundred railway pioneers near Villiersdorp Major Fisher killed two officers wounded some prisoners Boers lost ten."—E.D. J.M.)

CHAMBERLAIN'S SPEECH.

Shanghai, Nov. 26.

The German agitation about Chamber-

lain's speech finds not the faintest echo in Austro-Hungary, which looks askance at the German tariff.

SOUTH AFRICA.

A combined movement of several columns near Reitz has resulted in the capture of 39 Boers and the killing of several.

A later telegram says that a despatch of Kitchener's says the bulk of Fisher's men captured have been released. Remington pursued the scattered enemy and captured eight.

SOUTH AMERICAN AFFAIRS.

The American Government has prohibited the Colombian Government from bombarding Colon. The American Marines landed at Panama have gone to guard the railway and to maintain peace.

TEA GROWING IN THE U.S.

Shanghai, Nov. 27.

A report from the American Secretary of Agriculture says that tea-growing in the United States has been successful, the flavour and aroma being equal to those of the best imported tea.

CAPE COLONY.

A Cape *Gazette* announces that the colony resumes control of the colonial forces in certain districts.

MARQUIS ITO.

Marquis Ito has arrived at St. Petersburg.

BOER LOSSES.

Lord Kitchener's weekly report brings the total Boer losses for November to 1287.

COUNT HATZFELDT.

Count Hatzfeldt's remains were conveyed from the Embassy to Victoria Station with the fullest military honours.

VOYRON'S DISCLOSURES.

Shanghai, Nov. 28.

A sensation has been created in Paris by the disclosure of a confidential report of General Voyron, accusing a French missionary and a legation lady of systematic looting at Peking.

MORE BOERS CAPTURED.

General Knox has captured 36 Boers, including Commandant Joubert and two field cornets. Practically the whole of Joubert's commando has now been accounted for.

Joubert's and von Brandt's commandos captured two guns at Rietfontein in September.

[The above sentence was obscure in the dispatch.]

MACLAREN AGAIN DEFEATED.

New South Wales has defeated MacLaren's cricket team by 53 runs.

MARQUIS ITO AT ST. PETERSBURG.

Marquis Ito had an interview with Count Iamsdorff, yesterday, and also sees M. de Witte. Official quarters in St. Petersburg are confident that these interviews will do much towards removing any misunderstandings between the two countries. The visit alone proves that the relations between Russia and Japan are more cordial than had been supposed.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRANCE AND TURKEY.

Saigon, Nov. 22.

M. Constans, the French Ambassador to Turkey, has set out again for Constantinople.

STRIKING MINERS.

There has been a strike of miners at some mines. No incident has occurred.

FRANCE AND CHINA.

Saigon, Nov. 23.

The Chamber of Deputies has discussed

the Chinese loan. M. Hubbard made a long speech against the French protectorate of Christians in China. The general discussion having been closed, M. Sembat proposed the adjournment of the debate. M. Waldeck-Rousseau opposed the proposition, and by 398 votes to 183 the Chamber agreed to pass to the discussion of the articles.

THE CHINESE LOAN.

Saigon, Nov. 27.

On the demand of the Government, the Chamber of Deputies fixed at 265 million francs the amount of the Chinese loan.

(RECEIVED IN TOKYO.)

CHINESE NEWS.

The new tariff rates for goods entering Shanghai have been published.

The claims for compensation by private Japanese in connexion with the Boxer outrages aggregate $2\frac{1}{2}$ million yen. The Belgian Minister in Peking is reported to have said that his nationals' demands, when reduced to their lowest figure, total 8,960,000 million taels, and the Dutch claims amount to 800,000 taels.

A new pier, 3,600 feet long and 800 feet wide at its broadest part, is to be constructed at Chefoo so as to give maritime access to the Chinese town. The work will be commenced next spring, and is expected to occupy two years. The cost is estimated at 337,000 taels. The Engineer is an Englishman, and the work is under the superintendence of the Imperial Maritime Customs.

The Japanese Consul in Newchwang reports from Newchwang under date of the 16th instant that Admiral Alexieff reached that place by train from Port Arthur on the 15th instant, and left, the same day, by rail for Peking. It is supposed that he visits the capital for the purpose of consulting the Russian Representative with regard to the Manchurian Agreement.

The same Consul reports that the head of the civil administration of Newchwang, having obtained leave of absence, handed over the duties of his post to Commander Eberhardt (?) on the 14th inst.

The French Government, having for some time entertained the design of attaching a commercial agent to the Legation in Bankok, has now carried out the project. M. de Nofinean (?) has been appointed and will soon arrive at Bankok.

(FROM THE "N.-C. DAILY NEWS.")

LARGE FIRE IN HONGKONG.

Hongkong, Nov. 19.

There was a fire on Sunday in godowns 540 and 542, Des Vœux Road. The loss is estimated at \$300,000.

THE BRITISH COMMERCIAL COMMISSIONER.

Sir J. L. Mackay and staff went to Canton last week. They were entertained by the Chamber of Commerce at the Shameen Hotel on the 13th, and were to visit Wuchou on the 17th, to inspect the prospects of trade on the West River.

NEWS FROM THE NORTH.

Peking, Nov. 19.

Admiral Alexieff, Governor-General of Kuantung, is expected at Peking to-day.

H. E. Wang Wen-shao, who cannot arrive at Peking before the Empress Dowager's Birthday, is anxious to leave the settlement of the Manchurian question with Russia entirely to Prince Ching.

The Empress Dowager has almost determined to follow Prince Ching's advice and return at once to Peking, but the final decision is postponed to the 25th instant, when a decree will be issued fixing the date for the return.

H. M. S. "CRESSY."

Singapore, Nov. 21.

H. M. S. *Cressy* left Singapore for the eastward to-day.

MARINE DISASTERS IN HONGKONG.

Hongkong, Nov. 21.

The Norwegian steamer *Skramstad* sank after collision with the steamer *Taicheong* off the north point of the harbour at dusk on Wednesday. The crew were saved.

The steamer *Perla* collided with the *Taicheong* while the latter was fast with the *Skramstad*. The damage to the *Perla* is not serious. The *Taicheong* has been docked.

[The following are particulars of the three steamers reported to have been in collision at Hongkong:—The *Taicheong* is a steel screw steamer of 939 tons register, and was built in 1889. She is owned by the Asiatische Küstenfahrt Company. Her dimensions are: length, 224.2 feet; beam, 32.1 feet; moulded depth, 19.9 feet. The *Perla* is an iron screw steamer of 1,287 tons' register, is owned by the China and Manila Steamship Company, Ltd., and was built at Sunderland in 1878. Her dimensions are: length, 285.3 feet; breadth, 35 feet; moulded depth, 24 feet. The *Skramstad* is a Norwegian steamer, built of iron, of 759 tons' register. She was built at Hartlepool in 1891, and is owned by Messrs. A. F. Klaveness and Co. Her dimensions are: length, 245.1 feet; breadth, 34.6 feet; moulded depth, 17.5 feet.]

SHIP BURNT IN PORT.

Hongkong, Nov. 22.

The C. M. S. *Fushun* was completely destroyed by fire at Canton last (Thursday) night.

6.2 p.m.

The Canton correspondent of the *Hongkong Daily Press* wires that the fire on the *Fushun* commenced at 1.30 a.m. to-day (Friday). She is completely gutted. The officers are safe. One fireman and several passengers, it is feared, are lost. The cargo is a total loss. The wreck is still burning.

[The *Fushun*, Capt. Lunt, left Shanghai for Hongkong and Canton on the 15th Nov. She was a steel screw steamer of 2,346 tons' gross and 1,461 tons' net measurement, and was built at Glasgow in 1883, by Messrs. W. B. Thompson. She was fitted with new boilers in 1889. She was fitted with compound engines, with cylinders of 36, 72 and 48 inches diameter respectively. Her dimensions were: length, 280 feet; breadth, 40 feet; depth to main deck, 17.9 feet, and depth to upper deck, 25.4 feet.]

REBUKING A MARINE OFFICER.

A Washington telegram of Nov. 3rd said:—Lieutenant William C. Hartlee, United States Marine Corps, on a wharf in Manila recently, directed a Filipino boy to take up and carry his gripsack. The boy could not speak English, so did not understand the order and moved off. The Lieutenant thought this insolent and proceeded to thrash the boy with his walking-stick. For this he was court-martialed, and the record of the proceedings has just reached Washington. The Lieutenant was found guilty of conduct unbecoming an officer and gentleman. He is suspended from duty for three months, with loss of half pay, and is to be publicly reprimanded.

Admiral Remy was not satisfied with the sentence, which he declared it to be entirely too lenient. In his indorsement he regrets that the accused could so far forget one of the first requisites of an officer as to lose his self-control on a slight provocation from an ignorant person.

Says Admiral Remy: "In view of conditions existing in the islands and the care that should be exercised by all persons of the United States serving to sustain the consistency of the policy of the Government in endeavouring to effect the pacification of the islands acceptably to the inhabitants, the convening authority deems the sentence awarded by the court as entirely too lenient for the offence. In view of the court's own action the award of the public reprimand to the accused would be mockery, and but for the fact that the accused would escape punishment altogether the commander-in-chief would disapprove the sentence."

BANK OF JAPAN.

BANKING ACCOUNT.

KEROSENE.

The kerosene market is unchanged.

American	\$2.73
Russian	2.40
Langkat	2.35

SUGAR.

There has been slight movement in sugar but prices are practically unchanged.

	PER PICUL.
Brown Takao	Y. 5.90 to 6.55
Brown Manila	6.35 to 7.30
Brown Daitong	4.80 to 5.00
Brown Canton	5.00 to 7.40
White Java and Penang	7.60 to 9.10
White Refined	9.50 to 10.95

EXPORTS.

RAW SILK.

There has been a further decline of prices in the raw silk market which has once more tempted speculators into the field, with the result that considerable business has been done on the basis of our quotations. Holders are current sellers, and from all appearances will push sales up to the end of the year, being, as usual, in want of money.

QUOTATIONS.

Filatures—Extra, Fine	Y. 920 to 930
Filatures—Extra, Coarse	920 to 930

YOKOHAMA: SATURDAY, DECEMBER 7TH, 1901.

SUMMARY OF NEWS.

THE Australian Government has decided to assume the administration of New Guinea.

MONS. E. G. LIEBERT assumed charge of the French Consulate at Hongkong on Nov. 19th.

PRINCE KUJO, father of the Crown Princess, is reported to be lying in a grave condition at his residence, Akasaka.

THE death is announced of Miss Kate Greenaway, the well-known artist, and of Mr. E. J. Lonnen, the actor.

IT is notified in the *Gazette* that His Majesty the King has been pleased to approve of Mr.

Masaichi Noma to be Consul of Japan at Hongkong.

MARSHAL Marquis Yamagata, who went to Oiso several days ago to recuperate, has now recovered completely.

WORK in the Kanaya tunnel on the Tokaido having been completed lately the opening ceremony will take place on Dec. 25th.

THE Emperor and Empress have graciously presented the sum of yen 300 to the sufferers from the recent fire in Kōura, Kochi prefecture.

AT Sendai on the Dec. 2nd, a police constable named Chiba is reported to have wounded a man with his sword. The origin of the affair is not known.

THE Emperor, who caught cold during the recent manoeuvres, has now quite recovered. On Tuesday His Majesty resumed the transaction of public business.

A FAREWELL banquet was given by Mr. Li, former Chinese Minister to Japan, at the Imperial Hotel on Nov. 29th. A large number of guests were present.

NEWS from Formosa says that trial of the machinery in the workshop of the Formosan Sugar Company in South Formosa was made on Nov. 28th with satisfactory results.

OWING to a strong gale that visited Kobe and the neighbouring districts on the night of Nov. 27th a steam-launch and two junks belonging to the N.Y.K.'s Kobe branch were wrecked.

ON Dec. 3rd, a passenger train collided with another passenger train at Bakan station on the Kansai Railway, resulting in the injuring of two passengers and in damage to a carriage.

THE *Kobe Herald*, translating a telegram which appears in the *Osaka Mainichi*, says that during a cyclone which swept over Calcutta at the end of November, two hundred boat cargoes of jute were destroyed.

IT is reported from Nagano that on Nov. 29th while the passenger train that left Ueno station early that day was proceeding up the Usui pass the draw-bar of a carriage broke and the carriage capsized. There was happily no loss of life.

DURING a gale on Nov. 27th the premises of the Kasai primary school in Minami-Kazushika district, a suburb of Tokyo, now in course of building, were blown down, with the result that two persons were killed on the spot and several boys wounded.

THE steamer *Seitoku Maru* (1,200 tons) belonging to Okura & Co., while in Nagasaki on her way from Moji to Shanghai, collided with a foreign steamer on Dec. 2nd and sustained damage. She had on board 1,200 tons of coal for Hongkong.

THE Japanese Government is reported to have received notice from the St. Petersburg Government to the effect that an International Costume Exhibition will open in the Russian capital in November next year and that it is hoped Japan will be represented at the exhibition.

THE Standard Oil Company's Yokohama branch were victimized on Saturday evening by an expert thief, who, by a subterfuge and the use of the office chit-book obtained possession of the key of a certain safe whence he stole some eight

hundred yen. The thief was arrested at Atami on Wednesday.

THE tenth anniversary of the *Chishima-Ravenna* collision was observed at the Yokosuka Admiralty on Nov. 30th. An impressive ceremony of worship was gone through and among the persons present were the members of the families of those who were drowned in the disaster.

THE P. & O. Steam Navigation Company, the Austrian-Lloyd Steamship Company, and the Nippon Yusen Kaisha, are reported to have agreed to lower freights on matches between Japan and India from yen 2.75 to yen 2.25 per case. The new rate came into force on the 1st of December.

FROM information derived from trustworthy sources, it appears that Mr. Motono Ichiro will be appointed Japanese Minister to France as successor to Mr. Kurino, and that Mr. Tsunetaka Kato will be gazetted as Japanese Representative to Belgium in succession to Mr. Motono. These appointments will be announced in a day or two.

HIS Excellency Baron A. d'Anethan, Belgian Minister to Japan, and Mr. G. Batalha de Freitas, Portuguese *Chargé d'Affaires* to Japan, are about to return to their respective countries, the former leaving Yokohama on Dec. 13th and the latter on the following day. Before their departure, both Ministers will be received in audience by the Emperor.

IN view of the gradual development of the export of *jinrikishas* to Calcutta, Hongkong, Shanghai and other Asiatic ports the manufacturers in Tokyo have applied to the Department of Agriculture and Commerce for sanction for the organization of a guild among themselves. They further state that this step is considered necessary for the purpose of making quality and prices generally uniform.

SOME days ago, Mr. Kawakami, Japanese Commercial Agent in Vladivostok, sent information to the Japanese Government to the effect that he had been notified by the Russian Authorities in Vladivostok that in future parcels directed for Vladivostok should have their addresses written in a European language and not in either Japanese or Chinese as heretofore.

THE opening ceremony of the extension of the Yokohama Water Works will take place at the Noge reservoir on Dec. 22nd when the function will be attended by Ministers of State and others from Tokyo and Yokohama, numbering over 1,000 in all. The work of extending the water works, which was undertaken in June, 1888, is expected to be thoroughly completed not later than the 15th inst.

A JUNK called the *Koun Maru*, which left Yokohama on Dec. 2nd for Tokyo with a cargo of coal, encountered a gale off Shinagawa the same afternoon, and was blown toward the coast of Kazusa province. In this dangerous situation the craft was seen by a fishing boat, and the occupants, three in all, were rescued. The unfortunate vessel became a total wreck. The crew came back to Yokohama on Wednesday.

AT a meeting of the Kanagawa Prefectural Council held on Thursday, Mr. Asada, Mayor of Yokohama, proposed that the monthly salary of the president of the Council should be fixed at yen 300, and that of the vice-president at yen 200. His proposal, however, met with opposition from some members who contended that the salary of the president and vice-president should be lowered to yen 200 and yen 150 respectively. The meeting closed without any decision being arrived at.

POLITICAL NOTES.

Saturday, Nov. 30.

The latest rumour is that the *Seiyu-kai* and the Progressists are contemplating an amalgamation. In the opening years of parliamentary government they used to stand shoulder to shoulder for the purpose of opposing the "clan statesmen," and they are now supposed to have discovered a new bond of union in the fact that certain leading publicists and members of the House of Peers constitute an obstacle to the achievement of government by party, and can not be effectually swept from the path except by an united effort of the "people's parties." It is, in effect, a repetition of history. But the public will probably remain sceptical for some time. The violence of the disruption that took place between the Progressists and the *Kensei-to* a few years ago, after their very brief period of fusion, has not been forgotten, and only a very credulous person can believe that they are already prepared to renew the experiment at a moment's notice.

Monday, Dec. 1.

It is difficult to find a distinct clue to the present labyrinth of domestic politics. The *Seiyu-kai* do not seem to be working together. There is an idea that the calculations of the Party's leaders were somewhat disturbed by the edict summoning the Diet for December 6th, instead of for the end of the month as they had originally anticipated. We can not suppose, however, that such an error of calculation would have proved very embarrassing had the Party been of one mind. Evidently, however, its views are divided, some being disposed to attack the present Cabinet vehemently, whereas others take a more moderate line. The points which appear to have obtained some approval are:—

- 1.—That the Chinese Indemnity should be treated as a special account.
- 2.—That the present system of nominally reducing the national debt by purchasing bonds in the open market should be changed in favour of redemption by lot.
- 3.—That the Capital Fund (Naval) must be replaced with hard money.
- 4.—That expenditures not accompanied by administrative and financial reforms should be disallowed.
- 5.—That ordinary revenue should not be appropriated for expenditures originally payable out of the proceeds of domestic loans.

But although this list of principles is sufficiently explicit, the attitude of the Party towards it is by no means uniform, and unless some amalgamating inspiration is supplied within the next few days from a source not now apparent, the Cabinet will probably profit by the indecision of its opponents.

As for the project of a fusion of the *Seiyu-kai* and the Progressists, it has evidently failed to command general approval. The bitterness of the last rupture is supplemented by a natural reflection on the side of the *Seiyu-kai*, that since they are already strong enough to control the situation, there is no reason why they should make any sacrifice for the sake of obtaining a needless access of strength. There will, however, be one reunion, it is said: the Two or Three Club will return to the ranks of the Progressists.

There were some lively scenes in connexion with the election of a member of the Tokyo City Assembly for the Shitaya district on the 29th of November. The trouble was between the partizans of the *Seiyu-kai* and

those of the Progressists, and each side accuses the other of improper violence. It is impossible to distinguish the truth. What is certain is that vehement exception was taken to the manner of conducting the election; that some 70 voting papers of one side disappeared during the altercation, which apparently lasted until the small hours of the following morning, and that it was finally decided to seek the judgment of the Mayor of Tokyo, who resolved the difficulty by ordering that another election should be held.

The *Fiji Shimpō* publishes a *resumé* of the Budget for next year. From it we learn that the whole expenditures total 275 million *yen*; the ordinary expenditures being 177 million and the extraordinary, 98 millions. As to revenue, our contemporary does not give any particulars, but says that, including the Chinese Indemnity, the State's income will show a surplus. That is a very unsatisfactory account, leaving, as it does, so much to conjecture.

The present session of the communal assemblies appears to be unusually discordant. In no less than four prefectures the proceedings have assumed a disturbed character—namely, Aichi, Shimane, Oita and Ibaraki. The questions at issue relate chiefly to finance.

Tuesday, Dec. 3.

On the 1st instant, the Council of the *Seiyu-kai* met in Tokyo for the purpose of compiling a manifesto to be submitted to the general meeting of the Party on the 6th instant. It soon became evident that a manifesto containing any radical intimation of opposition to the Cabinet would not find favour. Discussion rose especially with regard to a clause declaring that no Budget unaccompanied by financial and administrative reforms could be passed. It was asked what was meant by "reforms" in such a context, what was to be their extent, and whether it was intended that the Party should commit itself to rejecting the Budget *in toto*, a course which would involve the suspension even of works of railway construction. Finally, in deference to this spirit of moderation, the Council decided to withdraw the manifesto and alter some of its provisions.

Apparently, then, the *Seiyu-kai* have abandoned their intention of adopting a hostile attitude in the approaching session. There are several explanations of this change of front, but the most credible is that Count Inouye interfered, exercising the functions of peace-maker delegated to him by Marquis Ito, and that just when the Party leaders had with difficulty been persuaded to admit the justice of Count Inouye's arguments, a strong telegram in the same sense arrived from Marquis Ito in St. Petersburg. Of course if the *Seiyu-kai* pass the Budget, their opposition in other directions would not greatly matter.

Wednesday, Dec. 4.

A meeting of the *Seiyu-kai* leaders, numbering 79 members of the Lower House and 45 others, was held on the 2nd instant, for the purpose of framing a manifesto to be submitted to the general meeting of the Party on the 3rd instant. Much interest attached to the "consultative meeting" on the 2nd, because from the tone of the manifesto adopted—which will surely be passed at the general meeting—it would be possible to infer the intentions of the Party with regard to the Cabinet. The manifesto was published by Tokyo newspapers on the

morning of the 3rd. It is said to have been adopted by the consultative meeting without a dissentient voice, which is the more remarkable, for the document does not contain a single word that suggests a fighting mood. It consists solely of abstract declarations as to the necessity of placing the finances on a sound basis, effecting administrative reforms such as shall expedite the discharge of business, adapting State enterprises to the resources available, and governing in accordance with constitutional principles. At the end there is a statement that the *Seiyu-kai* has no connexion whatever with the Cabinet and that its attitude towards political questions is determined solely by considerations of national interest.

A motion was made to reduce the number of the General Committee to five, nominated by the President, and to organize a body of councillors, one for each prefecture, elected by that prefecture. The motion was rejected.

It is evident that all the rumours with which the air was recently thick, have been dissipated, for the moment at all events. The *Seiyu-kai* has no intention of attacking the Cabinet or of refusing to pass the Budget. Probably there will be some discussion about the latter and some concessions will be mutually necessary, but, on the whole, the outlook is calm. It would seem, however, that the non-parliamentary members of the Party are not in an equally placable mood. They too met on the 2nd instant, and are said to have resolved that a strong course of opposition to the Ministry must be pursued. These *ingai-sha* frequently appear to consider it their duty to stiffen the vertebrae of the parliamentary members, but it is not on record that the latter pay much attention to such promptings.

The Progressists have decided to hold their consultative meeting on the 4th, when a manifesto will be drawn up for submission to the general meeting on the 5th. On the latter occasion Count Okuma will be invited to speak, and the Party will subsequently come together at a social *reunion* in his residence. So far as is known, there is nothing hostile to the Cabinet in the draft of the Progressists' manifesto. On the contrary, it distinctly approves of employing surplus revenue for the prosecution of State enterprises, which is the point that seemed likely at one moment to provoke special opposition on the side of the *Seiyu-kai*.

The *Chino Shimpō* has interviewed Mr. Kato Takaaki with reference to the rumour that he had planned and endeavoured to effect a grand union of the political parties. Mr. Kato ridiculed the story. He classed it with the canards circulated lately to the effect that a chrysanthemum party at Count Okuma's was for the purpose of winning over the House of Peers, and that a garden party at Count Inouye's was to placate the *Seiyu-kai*. Mr. Kato has not been engaged in any effort so radical or so romantic as that attributed to him. Speaking of the Diet and the Cabinet, he predicted that this session will probably pass quietly, and he strongly deprecated the idea of raising such paltry issues as the translation and publication of a Russian brochure by the Home Department or the acquisition of loot by some officers of the army. Matters of that kind were too trivial to be taken up in parliament. The finances were a question of a very different nature, and too much attention could not be devoted to them.

The Two or Three Club held a consultative meeting on the 2nd instant, and after much debate adapted a manifesto to be submitted to their general meeting on the 4th. They differ from both the *Seiyun-kai* and the Progressists, for they hold, first, that the restoration of the Naval Capital Fund is not possible at present and that the proceeds of the increased taxes should consequently be devoted to redeeming the national debt; secondly, that pending financial reform no State enterprises requiring the issue of bonds should be prosecuted; thirdly, that the Chinese Indemnity should be treated as a special fund, applicable to East-Asian purposes; fourthly, that the Conventional Tariff should be at once abolished; fifthly, that a strong attitude should be adopted towards the Manchurian problem and especially towards Russia's endeavours to conclude a secret treaty, so as to prevent a consummation likely to cause subsequent regret to Japan; and sixthly, that radical administrative reform must be undertaken. This Club has not much power to give effect to its views, but they are interesting.

Thursday, Dec. 5.

The general meeting of the big party was held on the 3rd instant, and the manifesto prepared by the consultative committee received unanimous approval. Our readers have already been acquainted with the general nature of the document. It is nothing more than a broad statement of principles, which does not pledge the Party to any special attitude with regard to any particular question. Mr. Masuda Masahisa, who presided at the meeting, explained the situation very clearly when he said that the Party confined itself to re-iterating the bases of the platform it had adopted when its leaders assumed office a year ago. Unfortunately they had been obliged to resign before giving practical effect to their views, but there had not been any change in the latter, and they now declared themselves to be continued advocates of administrative reconstruction and financial reform. Nothing was needed except that the Party should re-affirm those basic principles, leaving its committees to determine the manner of applying them to special questions. He also urged the necessity of union. Strength lay in coöperation, and every member of a political party ought to remember that he worked for a common cause, and that in order to stand in line with his colleagues, he must subserve minor points of individual opinion to the general views of the majority. As to the Party's attitude towards the Cabinet, it must be one of complete independence. The Party would go its way; the Ministry would go theirs. There would be no seeking for collisions, but neither would there be any attempt to avoid them at the expense of principles or by undue concessions.

This speech was warmly applauded, and the manifesto passed nem con. Thereafter Mr. Arai Shogo introduced a Representation urging that the number of the general committee as at present constituted made it unwieldy and ill-adapted for the discharge of business, and that it should be reduced to not more than five. It will be remembered that this proposal had already been submitted at the consultative meeting, and had been rejected. It was then coupled, however, with an additional scheme, namely, that a council be elected, one for each prefecture chosen by the prefecture. Apparently Mr. Arai and his friends agreed to abandon the latter idea in consideration of the former's being adopted. At any rate the Representation in its abbreviated form was passed by

the meeting. Of course, being merely a representation, it does not bind the leaders to anything.

The *Kenseihon-to* are said to have decided on abandoning their present name and re-adopting the historical appellation *Shimpo-to* (Progressists). Some of our readers may not be familiar with the origin of the term *Kenseihon-to* (true, *Kensei-to*). When the Progressists and the Liberals agreed to amalgamate into one large association, they chose the name *Kensei-to*, or "constitutional party," and their leaders took over the Cabinet from Marquis Ito. After a few months the disintegrating influences that had kept them asunder previously, were fanned into fresh activity by the efforts of Mr. Hoshi Toru, the result being that Count Itagaki and his followers resigned from the Ministry, leaving Count Okuma in office. After a few days Count Okuma resigned also, and there followed a rupture of the big association into its original elements. Of course the question at once arose, which wing of the divided parts was to retain the name *Kensei-to*. Here the advantage lay with Count Itagaki and his followers, for being the first to resign, they had also been the first to resume party action. Count Okuma and his friends then met the situation by adopting the term *Kenseihon-to*, or "the true Kensei-to," a clumsy name which they are now wisely disposed to change in favour of the good old term *Shimpo-to*, which has existed since 1881, and by which the public have always persisted in designating Count Okuma and his friends.

Friday, Dec. 6.

The consultative committee of the Progressists adopted, on the 3rd instant, a list of 15 resolutions for submission to the general meeting of the Party on the 4th. We shall not enter into the details of these resolutions further than to say that they point to the advisability of alliance with Powers having the same views as Japan towards the Eastern question; that they advocate preservation of the balance of power, alike in the interests of Japan and for the sake of China's integrity; that they insist on the restoration of Manchuria to its original condition, such a measure being essential to the peace of the East; that they advocate steps to obtain for Japan in Korea a status corresponding with her paramount interests there; that they advise the organization of an Asiatic Bureau in the Government; that they insist on a great increase of official activity in the cause of trade development; that they recommend the raising of revenue by indirect taxes and the gradual reduction of direct; that they propose the formation of a special office to control the conduct of Government works and the management of Government purchases, and that they also advance some general views as to administrative and financial reform.

An interesting feature of the consultative meeting was Mr. Oishi Masami's declaration that the Party's leaders desire to encourage a spirit of discussion. He implied that there is too much tacit assent in the Diet to the recommendations of special committees, and that it would be more wholesome if members expressed their views freely. We are not surprised to find a man of Mr. Oishi's intellectual activity making that criticism. It is undoubted that the Japanese Diet has not fulfilled the promise of its early days. Its opening debates led the public to anticipate the rapid development of an assembly to which the nation might look for models of rhetoric and close reasoning. But after the third or

fourth session a cloud of dull silence seemed to fall upon the once loquacious House of Representatives. Speeches went out of fashion completely, and whenever the materials for an animated debate appeared to be accumulating, the closure was ruthlessly applied. Considering how much and how well the Japanese talk on their feet outside the walls of the Diet, it is curious that they should have converted the central hall of discussion into an almost voiceless place of voting.

FINANCIAL.

Baron Shibusawa, Mr. Asabuki, Mr. Amonomiya, Mr. Okura and other leading members of the Tokyo Chamber of Commerce, having called upon the Minister of Finance to seek an explanation of the Government's policy, were informed that in pursuance of the Post-bellum Programme, the sum which ought to be obtained by means of domestic loans—that is to say, the sum representing previously unfloated loans together with loans to be floated next year—is 70¼ million *yen*. The Treasury has no intention of seeking to obtain this money in the present state of the market, and it proposes to make it up in the following manner:—

Postponement of State Enterprises.....	9 millions.
Postponement of repayment of loan from Formosan Bank	1 <i>yen</i> .
Sum assumed by the <i>Yokimbu</i> of the Finance Department in October of the present year	6,700,000
Sum to be assumed by the <i>Yokimbu</i> in May or June of next year	14,470,000
Sum obtained from bonds bought up this year	5,000,000
Sum obtained by giving bonds to military men in lieu of ready money	3,000,000
Surplus obtained from various sources ...	3,000,000
Remaining from the Indemnity	14,700,000
	69,870,000

This last item means that a sum of 14,700,000 *yen* has already been borrowed from the Indemnity in excess of the original plan, and that it should now be restored. But instead of restoring it at once, the Military and Naval works which were to have been carried out with the money are postponed.

MR. A. R. PATTISON.

His Majesty the Emperor has conferred on Mr. A. R. Pattison the third class Order of the Sacred Treasure, and Mr. Pattison has further been accorded *chokunin* rank in Japan. These distinctions are well deserved. Mr. Pattison, who is a Chief Engineer in the British Navy, was lent by the British Government, six years ago, at the request of the Japanese Government, to act as Professor of Naval Engineering in Japan and also as adviser on the education and training of Japanese naval engineer officers. He enjoys the reputation of having discharged those important duties with much ability and assiduity, and it is a matter of sincere regret that the exigencies of his own service do not allow him to remain longer in Japan. During his stay in Tokyo he has been essentially one of the "public-spirited" men of the foreign community, and his absence will be greatly felt. He and Mrs. Pattison carry with them the best wishes of all nationalities.

In compliance with the request of President Loubet, the French Minister in Tokyo is reported to have recently sent to his home Government a list of the Japanese artisans who exhibited at the late Paris Exposition and who were entitled to receive decorations from the Republic in connection with the exhibition. It is said that they number six in all.

CHINESE NEWS.

Tuesday, Dec. 3.

It is telegraphed by the *Jiji Shimpō's* Peking correspondent that when Prince Ching was received in audience at Kaifong, he found their Majesties by no means disposed to hasten their return to Peking. The Empress Dowager complained that the precincts of the foreign legations had been pushed unpleasantly near the Palace, and that the terms of the Peace Convention were not at all to her mind. Prince Ching's arguments, however, are said to have finally overcome this reluctance. As to the Manchurian affair, the Court is reported to have merely instructed Prince Ching to take counsel with Wang Wen-shao.

Wednesday, Dec. 4.

Tuesday's telegrams said that the departure of the Court from Haifong would be deferred until the 10th instant, in consequence of the Empress Dowager's indisposition. To-day we are told that the 14th has been officially fixed for the time of setting out. Probably the Empress Dowager, having arrived at the margin, shrinks from taking the leap. That is very natural. But although the return of the Court to Peking seemed for a long time problematical, things have now gone too far for their Majesties to recede, and as for the idea that the Empress Dowager might stay at Kai-fong while the Emperor went to the capital, it never appeared feasible.

Telegrams from Shanghai announce the issue of an Imperial Edict deposing the present Prince Imperial, who is a son of Prince T'wan. The public is aware that for some time past there have been rumours of dissipated and insolent conduct on the part of the adopted heir to the Throne, and more than once the probability of his rejection by the stern old Empress Dowager was hinted. Probably China is to be congratulated that the step has now been taken, for though dissipated youths often turn out very able men, the odds are not in favour of such a *dénouement*. At any rate, it is somewhat incongruous that the reversion to the Throne should be held by the son of a Prince who may be said to be in the position of an outlaw, saving his life only by concealing himself.

The news that the progress of pourparlers between Russia and China with regard to Manchuria has been stopped by Japan's objections, does not seem to be taken very seriously by the Japanese press. The *Jiji Shimpō*, on the contrary, publishes intelligence that after Viceroy Li's death Russia herself changed her attitude, and that delay has been caused by her choice. Telegrams received direct from China up to the moment of Reuter's news about Japan's objections, indicated that the conduct of the negotiations had been placed in the hands of Prince Ching and that he was to consult with Wang Wenshao. Certainly the death of Li interrupted the negotiations, and there is nothing to show that they were resumed prior to Prince Ching's return to Peking. All things considered, it seems necessary to regard the latest report with suspicion. Japan's attitude towards the Manchurian problem is certainly not one of unreasoning opposition to Russia as Reuter's telegram would suggest.

Cotton-spinning enterprise in Shanghai is threatened with some disasters. The Yeh Loong Cotton Spinning Company has had its property seized by the Russo-Chinese

Bank for a debt of 380,000 Tls. Apparently the debt was contracted during the hard times that prevailed for the past few years, and now that the outlook has improved, the shareholders hoped that the Bank would grant an extension of time. But the Bank would not do so, and all the property, which cost originally 736,000 taels, is advertised for sale. The International Cotton Manufacturing Company also is in deep waters. It has an over-draft of 475,000 taels with the Russo-Chinese Bank, and the latter has given notice that payment must be made by the 31st of January. The Directors have invited the shareholders to purchase 500,000 taels worth of debentures and to reduce the capital of the Company from 838,000 to 628,000 taels.

It is stated that the Chinese Court has decided to engage an American citizen as Adviser to the Foreign Office. The name of the gentleman is not given, but it is stated that his salary is to be thirty thousand *yen* annually. We should think that China could not take a wiser step. Her statesmen are able men and need no counsel from anyone in matters of domestic policy, but they have not learned how to deal with foreign affairs, and the aid rendered by a competent adviser would be invaluable.

Friday, Dec. 6.

The *Jiji Shimpō's* correspondent telegraphs from Peking that things are in a state of most complete quiet—the lull after the storm. He says that the Foreign Representatives are actually troubled for something to do, and that nothing will be taken in hand before the return of the Court. The Manchurian question is in abeyance. There may be some pourparlers between Prince Ching and the Russian Representative within the course of the next few days, but until their Majesties re-enter the capital no definite arrangement of any kind will be made.

It need hardly be added that the London news as to the Manchurian agreement having been again blocked by Japanese objections, is no longer credited. Rumour has been remarkably perverse in this instance. It failed to notice the very strong and conclusive part taken by Japan in obstructing the last Manchurian agreement through the Yangtze Viceroys, and it now attributes to her with regard to this agreement an attitude of opposition which she has not assumed.

KOREAN NEWS.

Saturday, Nov. 30.

The brother of Li Chun-yong, that is to say, a nephew of the Emperor of Korea, died on the 18th of November. It is curious that the news should be published only now.

There has been some delay in the departure from Sōul of the new Korean Minister to Japan, Mr. Li Yong-thai. It is now reported, however, that a farewell banquet was given to him in the Foreign Office on the 19th ultimo, and that he was expected to start early this month.

Mr. Kin, Korean Minister of Finance, has resigned, and his successor is Mr. Li Yong-ik, who seems to be now the most influential man in Korea.

Mr. Romanoff arrived in Sōul on the 22nd of November, and was received by the Emperor in audience the same day.

Tuesday, Dec. 3.

Correspondence from Korea says that

although no sufficient reason existed for general enforcement of the veto upon grain export, there can be no doubt as to the fact of a partial failure of the rice crop. In several districts the failure has been complete, and so much distress has resulted that numbers of people have become vagabonds, organizing themselves into bands and resorting to all kinds of illegal practices for the purpose of obtaining means of sustenance. The correspondence (*Hochi Shimbun*) predicts that if officialdom maintains its present apathetic attitude towards the troubles, something very like a general insurrection will ensue, but all the accounts reaching us of late indicate that the Korean Government has gradually gathered about itself in Sōul a military force incomparably superior to anything of the kind ever previously possessed by Korea. There will be no difficulty, therefore, in dealing with a recrudescence of "Tonghaks" or "Motomokki" or whatever else the rioters may call themselves.

It is now stated that Mr. Pok will be re-installed in his old post of Minister of Foreign Affairs when he returns to Sōul. The story is that there had not been any intention of depriving him of his portfolio when he set out for Japan to attend the manoeuvres in his capacity of Major-General, but that the Ministers of Russia and France having raised objections, the Emperor adopted the expedient of temporarily displacing Pok. It is hard to know how much of that is true. Mr. Pok is now in Kyoto. He and some of the Chinese officers who came to see the manoeuvres, are still enjoying their visit, and are escorted from place to place by an officer of the Japanese army.

Wednesday, Dec. 4.

It is stated that subscriptions for the shares of the Sōul-Fusan Railway are coming in much more rapidly than was anticipated. The number already subscribed for amounts to 450,000 or 460,000, which, at 50 *yen* per share, means that 22½ millions of the total capital of 25 millions have been taken up.

Friday, Dec. 6.

There have been defalcations on the part of tax-collectors in Korea, and the new Minister of Finance, Mr. Li Yong-ik, is said to have asked the Emperor for permission to put to death anyone whose mortgage amounts to ten thousand *yen*. The public have always understood that such defalcations were among the normal incidents of official life in Korea. Mr. Li ought to give some warning before he proceeds to extremities.

FORMOSA.

It is pointed out that the discontented elements in Formosa always make themselves felt at the fall of the year, when the approach of winter brings them face to face with the hardships of poverty. This season, the second crop of rice having proved a failure, causes of unrest are unusually active, and public opinion has also been disturbed by recent administrative changes which led to the dismissal of several *employés*. Much time must still elapse before the Japanese succeed in dealing finally and thoroughly with the factors of disturbance which have defied all previous rulers of the island.

Later accounts show that the casualties on the Japanese side in the recent disturbance were heavier than official reports suggested. The total of persons killed—including women—reached nearly twenty.

THE MISSING ARGUMENT.

We have often said that the public awaits with interest the statement of some valid proof that foreign holders of perpetual leases have a right to claim exemption from the house tax. Mr. N. W. McIvor was employed by the Yokohama lease-holders to make out a case for them, and it is possible that he has satisfied himself and them by the arguments marshalled in the document. As to that we can not offer any opinion not having seen the learned gentleman's compilation. In the meanwhile, however, we observe that the *Kobe Chronicle*, having apparently examined it, is not at all enthusiastic about its contents, and, in fact, finds fault with Mr. McIvor for straining points and endeavouring to prove too much. Incidentally our contemporary gives its own version of the case for the foreign leaseholders. It is this:—"What land-renters have the right to expect is that the direct house-tax, imposed for municipal purposes, should not be levied upon them, as the ground-rent already paid includes a commuted payment of taxes for municipal purposes." Now is that the whole argument, we wonder. If so, it seems to us very inconclusive. That the "ground-rent" includes a payment on account of municipal taxes is beyond all question. It includes the land-rate—as distinct from the land-tax—a very important levy, which constitutes a considerable part of the municipal revenue in every locality. Hence there never has been any attempt to collect land-rate from the holders of perpetual leases. But the house-tax is quite another affair. It has nothing whatever to do with the land. One man may hold only half an acre of land in the suburbs of Tokyo, for example, and another hold a hundred acres in the very centre of the business region, yet the former may have to pay a heavy house-tax and the latter may escape without any house tax at all. It all depends upon the extent and quality of the buildings that stand upon the land. Part of the contention of the Japanese Government, as we understand it, is that the land rent can not possibly have been intended to include a house tax, for it would have been quite preposterous to levy an impost upon property not yet in existence. Every one coming into possession of a lot in a foreign settlement was at liberty to erect what buildings he pleased there. He might put up a mere shanty, which, under Japanese law, would escape with a tax of a few *sen* annually; or he might put up a handsome pile of buildings which would be subject to a tax of two or three hundred *yen*. It would have been manifestly impossible to assess a uniform amount of tax for the purpose of covering such radically unequal liabilities. The attempt was never made, and no evidence can be adduced that the idea was ever entertained. All obligations connected with the land itself were covered by the land rent, whether national obligations or local obligations, but no provision was made with regard to buildings which had not yet any existence. It is not enough therefore to assert that the land-rent includes a commuted payment of taxes for municipal purposes. The proof must extend to showing that it includes a commuted payment of all taxes for municipal purposes. No one denies that it includes the important local tax called "land-rate," but land-rate and house-tax are wholly distinct under Japanese law, and payment of the one does not in any way affect payment of the other. The revised treaties clearly and unmistakably define the property which is to be exempted

from further payment of taxes: it is the property covered by the leases, and the leases are land leases and never have been anything else. These things seem to us so palpable that until some one undertakes to deal with them seriously we must continue to deny that any tangible argument has been advanced in favour of exemption from house-tax. Meanwhile, the existence of such an unsettled question is most unfortunate. We may assume that had it been possible for the Japanese Government to obey the dictates of sentiment only, it would have waived the claim altogether. But of course the Diet would not have endorsed any such proceeding, nor could it have been expected to do so. Now, however, it becomes worth considering whether arbitration is not desirable. Both sides are convinced of the justice of their cause, neither is willing to make a radical concession, and each is anxious to refrain from antagonizing the other. Under such circumstances the occasion seems eminently suited for arbitration.

The question of the house tax is dealt with by a correspondent calling himself "Centaur," who, addressing the *Japan Herald*, traverses an article appearing in these columns a few days ago. That triangular method of conducting a discussion has long been fashionable in Yokohama, though the merit of replying before one audience to questions originally laid before another is difficult to appreciate. However, in this case every contribution to the controversy is welcome through whatever channel it comes. "Centaur" assumes, we observe, that our article was "inspired." It was not. Nor is this. The Japanese Authorities have doubtless submitted their arguments to the Foreign Representatives, but as yet no outsider has been similarly favoured.

"Centaur" puts this query:—"I would ask the authorities whether, when the so-called 'land rent' was agreed on between the Foreign and Japanese officials, the house tax was not part and parcel of the municipal, prefectural and/or imperial tax to which the property was or might be liable, and lumped together in the land tax, seeing it was well understood at the time by all parties to the convention or agreement, that the land was required by foreigners for the sole purpose of erecting thereon residential and business premises."

Certainly if that could be proved the question would be finally removed beyond the reach of controversy. If it could be proved that the land rent was assessed so as to include all municipal, prefectural and imperial taxes, and that its assessment on that basis was clearly understood by the assessors, then no one would have another word to say. But we in turn would ask "Centaur" whether, upon calm reflection, he can seriously entertain such a hypothesis. Does he really believe that the Japanese Government, having solemnly agreed that foreign land-renters should pay a certain sum by way of rent and taxes of every description—imperial, local and municipal—is now deliberately seeking to violate that agreement, and to establish the fact that an important municipal tax was not so included?

We would further ask "Centaur" whether he has reflected that the house tax is only one item of municipal revenue. If it was intended and agreed that the land rent should include all "municipal, prefectural and imperial taxes to which the property was or might be liable," what right have Japanese

authorities to levy other municipal taxes of any kind, such as a tax upon vehicles, a tax on horses, and a tax upon incomes? And surely it is strange that if such an arrangement was made, no record whatever should exist whether in the form of a diplomatic note, or a despatch, or a convention, or an agreement. Where does "Centaur" find any evidence that the land rent was assessed on the basis he now so confidently indicates? If there is such evidence, he would do a public service by producing it. But there is no evidence of the kind, nor can there be, for the house tax in its present form did not exist in the Tokugawa days when the settlements were opened for foreign residence. The house tax, as now imposed, is absolutely independent of the land. It is assessed solely with reference to the nature of a building, and no fair equivalent for it in the shape of a fixed uniform charge upon the land could be devised.

An apparently forcible argument is that since no attempt was ever made to levy a house tax from foreigners under the old regimen, there are reasonable grounds for assuming that the right to levy it did not exist. The right existed, but the power did not. When the Japanese Government agreed to the establishment of Consular Jurisdiction, it divested itself of administrative power over foreigners. It was able to collect the land rents and the tax included in them, because a special remedy had been provided against default. But it could not have adopted any measure for enforcing the payment of a house tax, nor could it even have compelled foreign land-holders to furnish the documents necessary for purposes of assessment. There can be no doubt, for example, that the Japanese Government had a right to levy taxes upon horses and vehicles in foreign possession in the old days. But it never attempted to exercise the right, because it lacked the power to do so. The revised treaties do not confer any new rights upon Japan with respect to municipal or local taxes. They merely invest her with power to exercise the rights she already possessed.

As to the contention that foreign land-leasers pay a larger total of taxes than the Japanese themselves pay, it appears to us that even supposing such to be the case, there would not be any valid ground of complaint. For no other part of Japan can be compared with the former foreign settlements in the matter of municipal administration. Roads, lighting, drainage, policing—everything is better in the settlement areas than it is outside them. It will not be contended by any one, we presume, that the municipal outlay on the settlement areas should be a charge upon the Imperial Treasury. Every one will admit that they ought to be self-supporting as all other districts in Japan are. But they do constitute a charge upon the Treasury. The Treasury disburses something like a hundred thousand *yen* yearly to supplement the sums raised by local taxes within the settlements. That certainly is not right. We have no title to expect that the Japanese nation should be out of pocket on our account.

Moreover, the contention that we foreigners pay a heavier total of taxes than the Japanese do, depends entirely on the assumption that the whole of the land rent is a tax. It is nothing of the kind. It includes a tax, but it is not altogether a tax.

BARON KAWAGUCHI.

Baron Kawaguchi, Vice-Minister of the Imperial Household, has resigned, and his resignation has been accepted. The event is interpreted by a section of the public in a somewhat sinister sense, and the retiring official has added to prevailing suspicions by composing in commemoration of his retirement a curious couplet:—

*Kako wa kumo
Mirai wa mitzu ya
Yuki botoko.
Saraba tote
Oyeba niguru ya
Fuyu no hai.*

Which means in plain English, "the past is cloud; the future, water or a snow image. Farewell then; driven I flee like a winter fly." This composition may have profound significance for those to whom it is specially addressed, but to the general reader it conveys only an impression of dissatisfaction. The newsmongers affirm, however, that the origin of the trouble is connected with finance. Recently a rumour was started by one of these mischief-makers to the effect that although the 20 million yen voted for the Imperial Estate as a contribution from the Chinese Indemnity had been duly passed into the books, the interest on the money remained unaccounted for. Very likely the story has no more truth than the usual modicum which distinguishes the mare's nests of the yellow press in Japan. But being followed speedily by Baron Kawaguchi's resignation and his enigmatical couplet, mischief-makers are engaged in their usual pastime of putting this and that together, the resultant compound being a very pretty scandal.

Baron Kawaguchi, Vice-Minister of the Household, has been succeeded by Baron Hanabusa, hitherto President of the Imperial Bureau of Audit, and Master of Services to Prince Komatsu and Prince Kanin. The Emperor, in accepting the resignation of Baron Kawaguchi, has raised him a step in official rank, and the Emperor and Empress have presented to him a pair of silver vases.

Marquis Nakayama Takamaro has been allowed to resign his post as chief chamberlain to the Prince Imperial, and has been succeeded by Mr. Saito Momotaro, hitherto of Prince Arisugawa's household.

THE GERMAN TARIFF.

Attention in Europe with regard to the proposed changes in the German Tariff, seems to have been chiefly directed to international contingencies and to the possibility of a collision between the Chancellor and the Agrarians, the former being unable to grant as much as the latter demand. We now know that the Tariff has received the approval of the Federal Council, almost unamended, and it may therefore be assumed not only that Count von Bülow is prepared to proceed resolutely with the scheme, having assured himself privately that in spite of the adoption of a protective policy at home, it will not be impossible to renew Germany's commercial treaties abroad on reasonable terms, but also that German industrials are prepared to make large concessions to the Agrarians. The really important element of the matter from Germany's point of view, we think, is connected, not with either foreign or domestic politics, but with the influence that will be exercised on her own industries. It is an elementary truth that high duties

imposed on foreign food-stuffs react upon domestic products. German producers of bread-stuffs will not be content to sell their goods at present rates after they have obtained protection against foreign competition. They will naturally and inevitably push up their prices to the near vicinity of the limits fixed by the Tariff, and the result will be increased cost of living, a corresponding increase of wages, and enhanced prices for manufactured goods. Thus for the sake of the agrarian interests, Germany seems likely to handicap herself heavily in industrial competition with the world. The case of America may be adduced as contradicting such an analysis. America has not only thriven upon protection, but is also able to step out into the markets of the world and offer her manufactures at rates which procure ready custom. America, however, has extraordinary natural advantages which do not exist in Germany's case, and it does not follow by any means that a similar fiscal policy will produce similar results in both countries. The Kaiser's desire to foster the growth and prosperity of the sturdy farming class, and thus to check the rapid gravitation of the population towards manufacturing centres, is easily comprehended, as is also the stupendous difficulty that such a problem presents to German statesmen. But it is hard to reconcile this Tariff scheme with the principles that ought apparently to guide Germany in her new career. Her industries seem to us to be more important than her agriculture. She has been wisely guided, however, along the path that has led to her present greatness, and it may well be that the choice now made by her rulers is consistent with her best interests.

AMERICAN ENGLISH.

It is generally claimed by the people of the United States that where their spoken language differs from the language of England, the explanation is to be sought in their conservatism. They have preserved, they say, the old English idiom and the old English words, whereas in England itself there has been a gradual change. Whether that claim is advanced as something to be proud of, we do not know, but the reflection it suggests is that if language progresses like everything else, as it certainly does, then to have remained constant to the old forms is not an advantage. Besides, the claim itself is open to query. Why should English have been preserved more immutably in the United States, which is in fact a congeries of different nationalities, than in England which has been peopled by the English alone for many centuries? The whole subject provoked some discussion recently. Professor Brander Matthews of Columbia University and Miss Carey Thomas, Dean of Bryn Mawr College, assert that the English language as spoken in America will ultimately become the universal standard, whereas Professor A. H. Smyth, of the Philadelphia Boys High School, and Mr. George Riddle, the actor and Shakespearean reader, take the opposite view, maintaining that such an assertion is to say that a retrograde movement will be made, "for certainly it would be a retrograde movement which should make the strident tones and monotonous inflection of the American the standard of English speech." Mr. Riddle finds that "the very few men and women in America who have a high standard of speech have not been able to make that standard recognised, and consequently there have

been manifest for the last twenty years a carelessness and vulgarity of speech, accompanied by slouchiness of manner; in all the professions and in society, which may well bring forth the query: Is the art of delivery a lost art, and what is to be the end of this shameful decadence?"

THE RULE OF THE ROAD.

The police are certainly making efforts to enforce the rule of the road in Tokyo and Yokohama, but a long time must elapse, of course, before they succeed in inculcating an idea with which the Japanese people have never hitherto been familiar. We must say, however, that, in our opinion, the action of the police has become very perfunctory. When rules for the regulation of traffic were enacted some time ago, steps were taken to post them up at all the stations, and constables on duty took measures to enforce them. Now, however, if one or two special localities in Tokyo be excepted, wayfarers are allowed to follow the bent of their own sweet will. A feature of notable difficulty in Tokyo is that men or horses dragging carts are permitted to "cut" hills just as they please, and it frequently proves very embarrassing to find any part of the road free from the zig-zagging of a coolie or an animal straining under a heavy load. There would be some cruelty in insisting that such a practice should be abandoned, unless, at the same time, a rule were enacted and enforced that neither man nor horse must be loaded so as to necessitate "cutting." Then there are the children and the pedestrians. A Japanese child regards the street as its legitimate play-ground, and frequently one finds one's progress arrested by a little tot which not having yet learned to take care of itself, trusts every one else to look after it. As for the pedestrian, he frequently gives himself no concern to walk direct or to look ahead, and still more frequently it is impossible to attract his attention if one approaches from behind on a bicycle. Whether the generally placid condition of Japanese nerves is responsible, or whether traditional freedom from the incidents and accidents of heavy traffic be the cause, there is no denying that Japanese wayfarers are the most insouciant in the world.

DEATH OF MRS. FURUKAWA.

The death is announced, under very unhappy circumstances, of Mrs. Furukawa, wife of the owner of the Ashio Copper Mine. During the past two years the lady, who had attained the age of 60, had shown signs of mental aberration, and as a suicidal mania had shown itself in other members of her family, she was very carefully treated and watched. A sea-side resort having been found suitable, she passed most of her time at Oiso, visiting Tokyo twice monthly for the purpose of undergoing medical inspection. Recently, when arriving on one of these periodical occasions, she seemed exceptionally well, was able to receive visitors, and did not suffer apparently from anything but insomnia. On the 29th of November she visited Ueno Park to view the maples, and that night she disappeared from her room, nor could any trace of her be discovered until her body was found the following morning floating in the river near Kanda Bashi.

MARQUIS ITO.

The markedly friendly nature of the reception given to Marquis Ito in St. Petersburg and the fact that he proceeded thither direct from Paris, instead of first visiting London, which would have been the natural routine, have suggested to the public that the Marquis has a political purpose in view. It is probable, however, that his Excellency consulted the convenience of his own programme only when he decided to proceed in the first place to the Russian capital. Extreme cold is dangerous to a man suffering from an affection of the throat, and the cold in St. Petersburg would have been more trying at the close of December than at the end of November. Still, if that was Marquis Ito's reason he must have attached considerable weight to it, for there could be no question that the routine chosen by him would give rise to much comment. As to the political character of his visit, it is certain that he carries no authority from the Japanese Government to engage in any pourparlers or undertake any negotiation. But it is also certain that Marquis Ito is powerful enough to authorize himself, and that anything he does will be endorsed by Japan. Many people think, and we are not by any means prepared to quarrel radically with their opinion, that the only sure means of securing peace in the East and bringing about a satisfactory solution of the troublesome problems now in sight, is an understanding between Russia, Japan and England. But no one thinks, so far as we know, that a Russo-Japanese understanding from which England was excluded, could accomplish anything solid, even supposing that Japan were willing to become a party to such an arrangement, which is exceedingly doubtful. Russia, we take it, has two things prominently in view at present. The first is to find some temporary *modus vivendi* in Manchuria; the second, to assure herself that Korea shall not become a Japanese province. It may be taken for granted, perhaps, that her intention at the moment is not to remain permanently in Manchuria. Were England in her place, that assumption would be more difficult to entertain, for England would be able and willing to face the financial task of developing Manchuria's resources and making it a self-supporting dominion. Russia, however, has already on hand so much of that kind of capital-absorbing work that she sincerely shrinks from such a huge extension of her responsibilities as would result from taking possession of Manchuria. She is willing, therefore, to give it up eventually. But she can not give it up at once. Her presence there has so far disorganized Chinese administration that, if she marched out to-day, she would probably have to march in to-morrow. What she wants, therefore, is to obtain international recognition of her right to remain upon the scene until she can step aside with safety to her own interests and without loss of prestige. That is not unreasonable. But unfortunately so simple a programme is difficult to reconcile with the terms originally proposed by St. Petersburg statesmen as the basis of a Manchurian Convention. Their demands at the outset have left an unpleasant taste in the world's mouth, and men find difficulty in swallowing without a grimace the comparatively innocent morsel now offered for their acceptance. It is probably for that reason that Japan is believed to be strengthening the backs of the Yangtze Viceroys to oppose the new Manchurian Convention—opposition which, according to *The*

Times' correspondent in Peking, has again had the effect of blocking the way. Marquis Ito, therefore, if he were prepared to discuss a Russo-Japanese understanding, would find himself embarrassed by the fact that his country's attitude towards the Manchurian problem is diametrically opposed to the attitude which Russia desires to see assumed, and that while he was engaged in gracious pourparlers in St. Petersburg, the Tokyo statesmen would be taking a very different line in Kaifong. As to the second object of Russian anxiety, however, namely the fate of Korea, Marquis Ito is certainly in a position to reassure Russia, for Japan has not the slightest intention of bringing the peninsula within her sphere of influence by any means that are not strictly pacific. Probably the integrity of her purpose is not appreciated in St. Petersburg, and Marquis Ito may be able to place things in a clearer light. He can also frankly combat the too commonly entertained theory that Japan's mood is belligerent. Japan, we are persuaded, wants nothing except uninterrupted leisure to develop her resources and put her affairs into good order. She is a little out of breath with the pace of her progress during the past six years, and would fain enjoy a rest. If that fact can be established so as to carry conviction to the minds of St. Petersburg statesmen and the Russian public, much good-will be accomplished. But beyond assurances of pacific intentions and explicit explanations of Japan's mood, Marquis Ito is not likely to go. He will have a great deal to say about the future of China, but his views upon that topic, as well as upon the treatment of the Eastern question generally, must be set forth in London at least as explicitly as in St. Petersburg. That, we may be sure, he fully appreciates. At present his programme is understood to be some three weeks' sojourn in St. Petersburg, and then a second visit to Paris, London being his final bourne.

The *Hochi Shimbun*, referring to the telegrams recently sent from Europe to the effect that Marquis Ito's visit to St. Petersburg is likely to remove all misunderstanding between Russia and Japan, declares that if Russia desires to remove such misunderstandings, her first business is to settle the Manchurian question. Otherwise a hundred Marquis Ito's can effect nothing.

It is remarkable that not one of the leading Tokyo journals makes any editorial allusion to Marquis Ito's doings in St. Petersburg. The apparent explanation is that no importance is attached to the event. Marquis Yamagata's visit to the Russian capital some years ago was watched with much greater interest, apparently, but the result was such a very futile convention that people were permanently disappointed. At any rate the feeling in Japan to-day is evidently against any arrangement resting on a Russo-Japanese basis only.

Marquis Ito was received on his arrival in St. Petersburg by the Minister of Finance and several members of the Cabinet. His Excellency subsequently had the honour of audience with the Emperor.

It is stated that according to letters received from Marquis Ito, his return to Japan will take place at the end of March or the beginning of April. That accords with the programme generally assigned to him; namely, to remain in St. Petersburg till about the 20th of December; then to spend three weeks in Paris; and then a month in London which city he will leave about the middle of February.

Japanese newspapers begin to busy themselves about Marquis Ito's visit to St. Petersburg, but when we say "newspapers" we qualify the statement by noting that the journals which make much of the matter are the *Hochi* and the *Yomiuri*. It is the wont of these papers to keep their readers in a state of sensation and excitement. Therefore when they piece together a string of rumours tending to show that Marquis Ito is assuming towards Russia an attitude closely resembling that taken by the late Li Hung-chang, and that Russia has conferred on him an order never granted except for international services, their readers are disposed to smile rather than to look grave. The *jinrikisha* takes a very different line when it says that Marquis Ito is travelling as a private individual and has no authority whatever to conclude any conventions. Nevertheless, as he is the leading statesman of Japan, it is natural that he should receive a hearty welcome in Russia, and that the St. Petersburg Government should endeavour to win his friendship. Doubtless his visit to the Russian capital will have a good effect, but it does not bear the construction put on it by newsmongers in Japan.

We wonder what would have been said had Marquis Ito proceeded to London direct from Paris, and had he passed a month in the British capital before visiting St. Petersburg. No one would have seen anything strange in such a routine. The fact is that many folks are disposed to regard Russia as a species of monster, not to be approached with impunity. If that silly prejudice were laid aside, the atmosphere would be much clearer. The Russians are certainly showing much civility to Marquis Ito. They know how to be hospitable and charming—none better. We suppose that the Japanese ought to feel flattered and grateful instead of setting themselves to discover a mare's nest. Such, we are glad to see, appears to be the mood of the better classes, for it is noticeable that all the leading journals refrain from attempting to invest the incident with any element of sensation.

THE JINRIKISHA COOLIES.

A correspondent of a local contemporary writes in a very irate tone about *jinrikisha* coolies and their ways. He says that they are growing more and more extortionate, and that they now indulge in "abuse and filthy language," if one does not over-pay them. It is quite true. The *jinrikisha* coolie is behaving in a suicidal way. His fares are getting so exorbitant that people with any regard for economy hesitate to employ him. But is it just to lay the blame on "the police and the *Kencho* people"? Is it just to allege that they care nothing "about the fleecing and insulting of foreigners"? Is it just to call the Welcome Society "a farce and a pretence"? Neither the police, nor the "*Kencho* people" nor the Welcome Society can accomplish anything effective in this matter. It is for the individual to help himself. That he can readily do by observing three rules; first, never to engage a *jinrikisha* without making a bargain beforehand; secondly, invariably to take the number of the *jinrikisha*; and thirdly, always to send a written report to the police—indicating the number—if there has been any insolence or attempted extortion. No Japanese thinks of engaging a *jinrikisha* without a preliminary agreement as to terms, for the Japanese wayfarer is just as great a victim of extortion as the foreigner. A *jinrikisha* coolie never makes any demand at the

end of a journey if he has agreed beforehand to accept a certain sum. That is one of his redeeming qualities, of which it is well to take advantage. Some people have not sufficient command of the Japanese language for even such a simple purpose as bargaining with a *jinrikisha*-man, though half a dozen words suffice. There is no help in cases of that kind, and the only consolation is that if the coolie indulges in abuse, it will fall on deaf ears.

THE NIPPON YUSEN KAISHA.

The discontented section of Nippon Yusen Kaisha shareholders, headed by Mr. Kishimoto Kazuo, are not silenced though defeated. One of their number, Mr. Imoto Tsunejiro, is said to be about to institute legal proceedings against the Company on the ground that a violation of the Commercial Code was committed when an ordinary general meeting was invited to vote certain propositions which had not previously been submitted to an extraordinary meeting, or notified to the shareholders 15 days previously to the ordinary meeting. The principal of these propositions was the appropriation of a sum of five hundred thousand *yen* as a fund for extending the company's lines and improving its ships. A grant of 3,000 *yen* to the family of the late Mr. Nakamigawa is included in the category, as are also some minor items. The Directors reply that the appropriation in question formed part of the programme for distributing the profits of the half-year and that no exceptional procedure was required. Further, they point out that the matters adduced by the objectors have always been treated hitherto in the manner adopted on the present occasion, without provoking any objection. But Messrs. Imoto and Kishimoto decline to admit the force of such arguments. Chagrin at their signal defeat in the recent general meeting seems to have inspired them with a desire to make themselves objectionable in some way or other and their present course is obstructiveness, pure and simple.

At the semi-annual general meeting of shareholders of the Nippon Yusen Kaisha held in the hall of the Y. M. C. A., Kanda, Tokyo, on Nov. 27th, Mr. Kondo delivered a speech with regard to the past, present and future working of the company, which may be summarized as follows:—During the term covered by the report, a fair amount of business was realized despite the general trade depression and the tightness in the money market. Though the profits showed a slight falling off as compared with the previous term, the results were still far above the average of ordinary years. In addition to a 10 per cent. dividend, a special dividend of two per cent. was declared for the period under review and he therefore believed that shareholders would be satisfied with the business done by the company by which it had been possible to add *yen* 600,000 to the fund for the equalization of dividends, to set aside *yen* 500,000 for the expansion of steamship services and improvement of the fleet, and to carry over *yen* 640,000 to the next account. The reserve for the equalization of dividends has now reached *yen* 3,300,000, which sum the company does not intend to further increase for the time being, for the simple reason that so long as it remains in its possession the company will be able to declare a dividend of ten per cent. per annum for a period of at least one year and a half even if no profits were realized during that time.

With regard to the fund for the extension of routes and the improvement of vessels, it is urgently necessary to further increase this in future until it reaches such a standard as may be judged sufficient for the purpose, for signs are not wanting among the various Powers of a desire to

expand their shipping business with a view to establishing a predominance in the Far East. Accordingly the Company has put aside *yen* 500,000 as mentioned above, and it is the wish of the directors to carry forward, at the end of each term, further funds for such purpose. By virtue of an agreement between the Japanese Government and the company the latter has to keep up the Imperial mail lines in first class style in point of speed and accommodation, and in consequence as many as 16 steamers, representing 50,000 tons, each aggregating from 7,000 to 6,000 tons, will have to be built before the year 1907, the cost being estimated at ten million *yen*. In due course of time, the old steamers will also have to be replaced by newer and larger ships so as to preserve the balance among the many foreign shipping companies, in which the Nippon Yusen Kaisha now occupies seventh or eighth rank in point of tonnage.

At the time of the organization of the company a number of years ago it had only a capital of some 10 million *yen* and vessels aggregating no more than 60,000 tons, whereas its assets now amount to something like 38 million *yen*, with a fleet representing 230,000 tons. In conclusion, the speaker remarked that viewed from both military and commercial points of view there seemed to be no alternative for the company but to carry forward its programme of expansion and that the shareholders must therefore strive with perseverance and courage to promote the interests of the company.

PARALLELS, HAWAIIAN AND JAPANESE.

The *Shinto* ordeal of walking on fire has often astonished foreign onlookers, but to this day it remains uncertain whether the whole performance is anything better than a mere trick. It would seem that a similar miracle takes place occasionally in Hawaii, as witness the following account by Mr. Ernestine Coughran:—

Great is the faith of the Hawaiians in the powers of the kahuna, their priest, or sorcerer, and when it was announced that Papa Ita, the aged fire-walker from Mauritius, had come to the islands to perform the ceremony of walking over heated stones in the city of Honolulu, the tidings spread far and wide among the superstitious natives, and the wildest excitement prevailed, for the rite had never been performed in the Hawaiian islands before. The stones which were to be heated, and trodden barefoot by the Tahitian, were carefully selected by Papa Ita himself. They were of lava formation and were taken from an old wall in the Portuguese section of the city. When the excavation had been heaped to the level of the ground with hau logs, the stones were piled upon the pyre, forming an oval mound about ten feet in height. Meanwhile Papa Ita retired into the woods, there to invoke the spirits and to gather at midnight the leaves of the ti-plant, which were to be woven into a magic brush of command, for use in subduing the spirits of the heat and the flames.

Next morning the fire was lighted and was allowed to burn fifteen hours. As the fuel burned out, the stones sank into the excavation, the heated air shimmering upward. As the stones sank lower and began to glow with the heat, the excitement ran high, and by sunset hundreds of people were hurrying from all parts of the city to the scene of the promised exhibition. Papa Ita had calculated well: at the appointed hour the fire had died low and the stones sank slowly down, glowing white-hot. A few minutes later the crowd fell back on either side and between the two lines of silent people the fire-walker moved toward the inner circle, his eyes intent upon the glowing stones. Then he lifted his hand in command, and attendants with long poles fell to work turning over the heated stones. As the white-hot sides of the lava rocks turned upward under the skilful manipulation of the long poles, darting tongues of flame leaped through the apertures, throwing a red light over the scene, and the great heat from the furnace compelled the circle of spectators to widen and fall back. When a line of stones the entire length of the oven had been turned with the glowing sides upward, dried grass and bits of paper were tossed upon the rocks to show the heat. These light materials were immediately shriveled up and burned to ashes.

Suddenly the fire-walker leaped to his feet, and stamping slowly upon the ti-leaf carpet, began to wave his sacred brush and chant, swaying his body and looking heavenward. Then, lifting the great brush of ti-leaves high in the air, he smote the ground

twice and walked unhesitatingly into the glowing heap, stepping deliberately from stone to stone with bare feet and emerging apparently without pain or injury on the other side. Immediately turning round and repeating the command to the fire-spirits and smiting the ground as before, he walked back over the entire length of the oven and returned to his chair.

After a few minutes he repeated the feat, with the same incantations and smiting of the ground, and four times he successfully trod back and forth over the red-hot lava rocks, as he had said he would. When he stepped forth from the mound the fourth time, a great cheer rent the air and the natives rushed into the circle, showering money upon him.

FRENCH NOTES.

A deficit of 50 millions of francs in a budget of 3,500 millions is not a very serious affair. Yet the French Government seems to be taking it very seriously. In order to make ends meet, the Budget Committee have struck out 42 millions appropriated for priests' stipends. No one imagines that the Committee's amendment will become law. Neither the Chamber nor the Senate will violate the Concordat by stopping the priests' stipends. Probably because that is apparent, another device has been proposed, namely, a state monopoly of kerosene. Concerning that, the Paris correspondent of *The Times* says:—

When Thiers was trying to devise a way of meeting the cost of the new loans, among other schemes submitted to him was a match monopoly. Matches were chiefly manufactured in the south, and some of the principal makers came to Paris and proposed to M. Goulard, then Minister of Finance, a match monopoly. After a little hesitation he agreed to it. An indemnity to the makers had then to be considered, and the very men who had given a dazzling picture of the monopoly then put forward such extravagant demands that had the Government foreseen them it would have renounced an almost disastrous scheme. So enormous were the indemnities that I believe the interest on the capital sum has thus far entirely or almost entirely absorbed the profits, while the State-made matches are so bad that French matches have become a byword.

This experiment, among others, should have cured Parliamentary committees of the monopoly mania. Not so, however; the Budget Committee, as already mentioned, has now proposed a petroleum monopoly. The State is to buy the petroleum, refine it, and sell it, thus, as the proposers imagine, securing several millions of francs towards the famous deficit of 50,000,000f., now the subject of real or affected uneasiness. It will probably be with petroleum as with matches, and the proposers of this scheme had doubtless particular reasons for their action. The Bill once passed, indemnities will have to be paid, premises to be bought, stock to be taken over. The State will become petroleum refiner just as it has become matchmaker. Directors, subdirectors, secretaries, inspectors, engineers, district vendors, indeed an army of officials, will begin by making petroleum dear and inferior, and the State, after paying indemnities and salaries, will make no profit, while the public will find that the price is higher and the quality poorer. There is just now, however, such a wave of collectivism that a State monopoly is irresistibly seductive, and, as with matches, people desirous of good petroleum will be forced to smuggle it.

THE KWANTO BANKS.

The chief officials of the Kwantō Banks held their annual meeting yesterday in the Bank Assembly Hall. These *Kwantō Ginkō* comprise all the most important banking institutions of the eight Kwantō provinces, and yesterday they agreed to admit to their association the Nagaoka Bank of Echigo. No other business was done at the meeting, but at a reunion subsequently held in the Bankers Club and attended by the Prime Minister and several other members of the Cabinet, Mr. Sakatani, Vice-Minister of Finance, made a speech with reference to next year's Budget. He said that the general policy of the Cabinet might be described as sacrificing everything for the sake of producing ease in

the money market. To that end it was essential that economics and finance should go hand in hand, and although many enterprises pressed to be undertaken, the Government had resolved to postpone them. The Budget, to be presently submitted to the Diet, would furnish all details, but he might perhaps take the opportunity of speaking a few words. The budget for next year showed a total expenditure of 278 millions. According to the *post-bellum* programme there ought to be a sale of bonds next year to the extent of 17 million *yen*, but it had been resolved to abstain from any operation of the kind. On the other hand, the expenditures showed that the ordinary appropriation for redeeming the national debt was reduced by 12 million *yen*. In the extraordinary section of expenditures a total of 38 millions appeared under the two items of redemption of bonds and expenses of the Chinese campaign. With regard to the reserves, the usual sum of 3 millions was set aside, and further 2 millions were allowed in prospect of rebate duties on sugar. Moreover, in order to place the revenue on a sound basis, the returns from the tobacco monopoly, from posts and telegraphs and from *sake* had been estimated at 4 millions less than the figure for the current year. Mr. Sakatani added that he had been engaged in the compilation of budgets for 18 years, but he had not seen any budget compiled on a firmer basis than the one now to be submitted. He concluded his speech by alluding to the revised draft of banking regulations now in process of compilation.

THE TWO OR THREE CLUB,

The Two or Three Club has now definitely pledged itself to the propositions that a Russo-Chinese Agreement for the continued occupation of Manchuria must be opposed to the bitter end, and that the Conventional Tariff must be abolished. Other resolutions have been adopted by the club, but they have comparatively little interest. We can well understand the anxious desire of some Japanese to get rid of a conventional tariff by which they are bound for eight years longer, but it is difficult to see how the thing could be managed.

It may be mentioned that the proposal to abandon the name *Kenseihon-tō* and revert to the old term *Shimpo-to* (Progressists) has been negatived for the moment. The intention of the change was to open a door for the return of the Two or Three Club to their old allegiance, but apparently it has been found that more than a name stands in the way.

THREE WEEKS TO LONDON.

At last the Trans-Asian Railway is to be a practical feature in the lives of Far-Eastern residents. From the *N.-C. Daily News* we take the following, which, though a leading article, smacks sufficiently of the advertisement to be read with caution, though its main facts are doubtless true:—

From Mr. J. Clerfayt, General Passenger Agent of the International Sleeping Car and European Express Trains Company, Agent of the International Palace Hotels Company, and Special Agent for the Trans-Siberian Railway, we learn that by May next a semi-weekly service each way will be opened between Paris and Peking, whereby passengers will be taken in the luxurious carriages of the International Company the whole way for the sum of fifty-two pounds sterling, food and everything included. At first, there will be two breaks in the journey, one at Lake Baikal, where the passengers have to cross by steamer until the line round the south of the lake is completed, which it will be later on in the year; the other at Yingkou (Newchwang), where the difference of gauge between the Russian line and

the Imperial Chinese Railway, and the unbridgable river Liao necessitate a change of carriages. It is possible that the change of carriages at Lake Baikal may be obviated by their being taken across on the steamer; but in any case the whole distance from Paris to Peking will be done in the International Company's carriages, a number of which have been secured by Mr. Kinder for the Imperial Chinese Railway. For the convenience of passengers to and from Central and South China and Japan, Dalny and Port Arthur will be served by sections of the same train, and it is understood that the Manchurian Railway will put on a line of fast connecting steamers between Dalny or Port Arthur and Shanghai, so that we shall be within three weeks or so of London. The International Palace Hotels Company is proceeding with the construction of a grand modern hotel of one hundred rooms at Peking, and another at Yingkou for the benefit of passengers who may wish to have a night's rest on terra firma before changing on to the Chinese railway. It seems pretty certain, too, that before very long the journey will be much shortened by the construction of a line north-west from Peking to the Trans-Siberian through Kiakhta.

COST OF THE SOUTH AFRICAN WAR.

The sums spent by the British Government on the South African War are not by any means lost to the British nation. They merely pass from one set of British pockets into another, if we except the comparatively small amounts paid in foreign countries for the purchase of horses. But there is one solid loss, namely, the interruption of the production of gold. In 1898, the value of the gold mined in the Transvaal was \$79,212,953 (gold), and it would certainly have reached 100 millions in 1899 had not war been imminent throughout a great part of the year, finally breaking out in the fall. Even under those unfavourable circumstances, the output was \$71,691,163. But the figure for 1900 was only \$9,671,000, a falling off of \$62,020,163. *Bradstreet's* gives the following table of the Transvaal's gold production since 1889:—

Year.	Value.	Year.	Value.
1900.....	\$ 9,671,000	1894	\$39,696,330
1899.....	71,691,163	1893	28,293,831
1898.....	79,212,953	1892	23,220,108
1897.....	57,633,861	1891	14,885,639
1896.....	43,779,669	1890	10,438,356
1895.....	43,893,300	1889	7,788,372

Were it not for the war, the Transvaal would be the most prolific gold-field in the world, America coming second with \$79,171,000 in 1900, and Australasia third with \$74,260,000. When the Transvaal is finally in British hands, it will certainly produce a hundred million dollars worth yearly, and then the annual gold output of the British empire will aggregate 215 millions dollars, approximately, out of a total production of 330 millions for the whole world. It is worth noting that the gold mined in Anglo-Saxon dominions will at that time represent some 300 millions of the world's total production of 330 millions.

KUANGTUNG.

A correspondent of the *N.-C. Daily News* who has just completed a trip in Kuangtung, says:—

It is impossible not to appreciate the friendly feeling with which, at present, in this part of Kuangtung, natives regard foreigners. This altered feeling shows itself in many ways. The disgraceful epithets which were habitually hurled at the heads of foreigners are no longer heard. The native officials treat foreigners, whether they are missionary or otherwise, with a marked respect. The Customs officials who control the linen let travellers go free wherever possible. In these and other ways it is clear that times have changed. Whether this respect is, so to speak, skin-deep only, or otherwise, it may be impossible to affirm. What is true is that, whilst a year ago the natives were mad with rage at Europeans, and cruelly persecuted the native Church in order to mulct the Christians of the little property they possess, and pulled down chapels in order to carry off the bricks, to-day, as far as we can judge, the most friendly relationship prevails.

NOTES ON CURRENT EVENTS.

Mr. Hayashi, Japanese Representative in Seoul, speaking to the United Chambers of Commerce at Chemulpo, took for text the importance of active promotion of their own interests by merchants and manufacturers. He said that his hearers might be disposed to thank him for his efforts to get the grain-export veto rescinded, but, on the contrary, he had to thank them for taking action which materially strengthened his hands. If they always made their voices sufficiently loud, they could count on getting a hearing. Extending that theory to the present treaty between Japan and Korea, he pointed out that the treaty had been concluded at a time when the international status of Korea was uncertain, and when it was impossible to treat on liberal and intelligent grounds. The document had long ceased to be suitable. But to obtain revision now might be troublesome, whereas it might have been done with the greatest ease in 1896, had any one appreciated the advisability. The paltry dimensions of the Japanese settlement at Jinsen illustrated his meaning. If merchants themselves had taken an active interest in the delimitations of the settlement originally, they would not now have to complain of its insignificance compared with the British settlement.

A garden party was given by Count and Countess Inouye at their Azabu residence in Tokyo on the 28th instant. The weather was fine though cold, and the garden looked very beautiful in its dress of autumnal tints. There was no special display of flowers nor yet any music. Profuse hospitality and a spirit of the most genial fellowship were the sole factors of entertainment, but it would scarcely have been possible for any gathering of friends to evince greater enjoyment. Much attention was attracted by a bronze statue of the Count erected in an exceptionally handsome shrine in one of the secluded parts of the spacious grounds. This was a tribute offered by Count Inouye's closest friends and most sincere admirers to the conspicuous talents that have marked his public career and to the fine qualities of his private life. It need scarcely be said that the party was very largely attended, and that it included all the notables in Tokyo, from the Prime Minister downwards.

The fifteenth graduation ceremony of the Military College took place on the 28th instant, His Imperial Highness Prince Kanin attending as the Emperor's representative. Forty officers graduated, namely, 34 captains and 6 lieutenants. Five received awards from the Emperor in consideration of having specially distinguished themselves.

The War Department has decided to abolish the office called *gunri*, that is to say, paymasters not having military rank. The method hitherto pursued in appointing these officials has been to select soldiers that showed special aptitude for accounts, and after giving them a course of one or two years in the *Keiri Gakko*, to appoint them as paymasters or paymasters' clerks. Experience has shown, it is said, that men obtained in that manner are apt to combine with contractors to the detriment of the service and the loss of the public. Hence it has been decided that combatant officers shall henceforth be appointed. So, at least, our Tokyo contemporaries say. The change can not be at once effected, of course.

The loss of two small steamers in Fukaura bay, Awomori Prefecture, on the 24th instant, is announced. They were the *Tatsu*

Maru (78 tons) and the *Okami-kawa Maru*. Both met with the same heavy weather and were lost in attempting to make the land. The casualties were five of the crews and nine or ten passengers.

The Finance Department has refused permission to the Agricultural Banks to issue premium-bearing bonds, but has directed that all possible assistance shall be given to the banks by the Industrial and Commercial Bank. It is not stated exactly what form the assistance shall take. As to that the Minister of Finance is to give a subsequent explanation.

The Emperor has presented to Count Date two silver vases and a lacquer writing-box, in consideration of the services rendered by the Count on the occasion of the recent manoeuvres.

There have been snowfalls in many places—Gifu, Takata, Maizuru, Tottori, Okayama, Hiroshima, and Yamaguchi. On the afternoon of the 29th instant, Tokyo also saw the first snow of the season, though it did not exceed a few flakes.

With reference to the barley crop for this year, the Department of Agriculture and Commerce reports that between the years 1860 and 1897, the area of land under barley varied from 1,700,000 *cho* to 1,770,000 *cho*, but from 1898 it passed 1,800,000 *cho*. The year 1894 gave an exceptionally good harvest, the amount being 19,820,000 *koku*, but from 1898 the yield always exceeded 20 millions of *koku*. This year (1899) the area under cultivation was 1,812,786 *cho*, and the yield was 20,521,950 *koku*. These figures show an increase of 6,789 *cho* in area and of 130,277 *koku* in yield as compared with the preceding year; and as compared with the general average, the area is 34,194 *cho* larger and the yield 1,103,359 *koku* greater.

The Emperor of Japan has bestowed decorations upon the French Minister of Agriculture and the other 34 members of the Exposition Committee, who rendered much aid to the Japanese on the occasion of the great fête in Paris.

Eleven appointments are announced of heads of sections for the Japanese Domestic Exhibition in Osaka the year after next. Among the names are those of Mr. Wada, Chief Engineer of the Wakamatsu Foundry; Mr. Hara Yasutaro, Chief of the Forestry Bureau in the Department of Agriculture and Commerce; Mr. Tsuji Shinji, Privy Councillor; Professor Nakayama; Mr. Teshima, President of the Tokyo Industrial School, etc. Little more than a year now remains before the opening of the Exhibition, which will probably be on April 1st 1903.

Captain Takemura and the other officers and men who are to bring out the torpedo-destroyer *Asashivo*, now in course of construction at Messrs. Thornycroft's yard, left Tokyo en route for England on the 30th ult. The *Asashivo* will be completed and ready for her voyage out at the end of March. Her displacement is 310 tons; her speed 31 knots; and her armament consist of 5 torpedo-tubes, one 12-pr. quick-firer and five 6-pr. quick-firers. The party started from Yokohama at noon on Saturday in the *Hitachi Maru* (Capt. Campbell) which was escorted down the bay by two torpedo-boat destroyers.

The recent disturbance caused by Russian sailors at Inasa seems to have been of the

usual order and the events followed the wonted routine. One or two men, maddened by drink, began to smash everything within reach, including the heads of those that sought to restrain them. Attempts to conduct them to the police station provoked rescue by their comrades, and the upshot of the matter was that certain sailors were lodged in jail and sundry Japanese, constables and civilians, received injuries which are carefully catalogued according to the number of days or weeks that will be required for recovery. Nagasaki will always be the scene of such affairs, we presume.

The Emperor has sent a sum of 1,500 *yen* to the Japan Railway Company in consideration of having travelled by it to Sendai on the occasion of the recent manoeuvres.

The engine-drivers and stokers of the Japan Railway Company have an organization which may cause much trouble one of these days. It is called the *Kiyōsei-kai* (reform party), and it has 700 members, who have accumulated a common fund of 17,000 *yen*. They are thus in a position to go on strike for a month should an occasion arise. What their grievances are we do not distinctly know, but it appears to be a question of pay.

The Minister of the Imperial Household gave a farewell banquet on the 30th ultimo to Mr. Poklewski, Secretary of the Russian Legation, who has been transferred to London and will soon be leaving Tokyo. Mr. Poklewski has been extraordinarily popular in the Japanese capital and his departure will be widely and keenly regretted.

The Federal Premier of Australia, Mr. Barton, has now to consider the contingency formulated by the Japanese Government to Mr. Chamberlain and telegraphed by that statesman to Sir L. Madden. If the Australian Commonwealth persists in legislating that no steamer carrying mails shall have Asiatics among her crew, the Nippon Yusen Kaisha will have to abandon its Australian service, to the no small disadvantage of the colonies. The drafters of the Immigration and Post Office Bills must have well understood that their proposed vetoes would have that effect, but it may be doubted whether the Australian public at large understood it, and the Japanese Government's intimation is not unlikely to have a wholesome influence. The world was surely never more imbued with racial prejudice than it is at the commencement of this 20th century.

It is now said that the debts of the great Nishi Hongwan temple amount to two millions of *yen*, and that it is much embarrassed by having to pay a very high rate of interest. In the sequel of a consultation held with representatives of the principal parishes, it has been decided that two millions shall be lent by the faithful at 8 per cent. interest; that the debts now standing at usurious rates shall be paid, and that during the next two years all the disciples of the Sect throughout the empire shall put up a sum of two millions in four installments. The programme sounds well, but will it work?

It is generally the fate of amateurs to perform once and once only in each theatrical piece prepared by them with infinite care and trouble. We have often commented on the hardship of this both to the actors and actresses themselves and to the audience. Mrs. Minnie Maddern Fiske has just made a similar remark. She says:—

"To the player unhappily affected on a first night the conditions seem to be abnormal, and they are destructive of confidence and are a weight on the spirit. The excitement, the preliminary hurry, the worry over things that may go wrong, and the general nervousness—for even the players who pass through the ordeal successfully are themselves nervous before the play begins—all these things have a dispiriting, benumbing, and depressing effect. Are this depression and its concomitants the results of weakness of artistic character, or are they due to a momentary confusion of the artistic sensibilities which, in favourable circumstances, prove the possession of a higher type of artistic character? The player who on a first night may be rendered inefficient by the peculiar influences of the occasion may subsequently show the very best that is in him. Thus the temporary weakness must be accidental rather than a characteristic fault."

Mr. Kojima Ban is said to have invented a new kind of lacquer or varnish to which he has given the name of *Miyochin-nuri*. This stuff has the effect of investing linen with all the properties of water-proof leather, so that it will no longer be necessary to import leather for military accoutrements, boots or any of the purposes to which that article has hitherto been applied. Mr. Yoshida Toramatsu has furnished capital for the manufacture, and factories have been created near Omori. Much importance seems to be attached to the discovery, and the Army Authorities are reported to have taken it up eagerly. We need scarcely say that the name chosen has reference to the greatest family of armour-smiths ever produced by Japan, the Miyochin.

Telegrams from Wakamatsu say that the new foundry is now in full and successful operation, and that since the 2nd instant it is turning out 160 feet of 60 lb. rails daily. There was some talk of failure at the time of the opening ceremony, but everything is now reported to be satisfactory. The foundry will have to work very hard if it is to prove a paying concern.

It having been denied by the *Nichi Nichi Shimbun* that Marquis Oyama had resigned, the *Fiji Shimpō* has interviewed the Field Marshal, and has received his direct assurance that he tendered his resignation last summer, but that it has not yet been definitely accepted owing to the question of his successor not being decided. Marquis Oyama does not offer any reason for his resignation. He merely says that after the death of Viscount Kawakami there was much important business to be discharged at the Head Quarter Staff Office. All that is now disposed of, however, and the Field Marshal does not see any reason why, at his age, he should remain in his present position when there are many officers quite competent to take his place.

SILK TRADE IN YOKOHAMA.

The silk business in Yokohama has been more active this year than at any time since the opening of the port for foreign trade, with the exception of 1899, when the record showed unprecedented prosperity. For instance, arrivals of raw and waste silk amounted to over 96,000 cases up to the end of November this year and the amount sold was over 80,000 cases, being an increase of about 17,000 cases in arrivals and of over 34,000 cases in transactions as compared with the corresponding period of last year. Below is a table showing the business done from June to November inclusive in 1900 and 1901:—

	Last year. cases.	This year. cases.
Arrivals	79,289	96,243
Sold	45,624	80,104
Stock	38,237	24,244

THE SEIYU-KAI ORATORS IN SENDAI.

(COMMUNICATED.)

The municipal authorities of Sendai have no doubt been busy with accounts since the Emperor bade farewell to the city. They have discovered that the Imperial visit and the general arrangements connected with the manoeuvres have cost the town 26,000 yen. When the excitement is over, casting up accounts connected with a variety of entertainments is very dull work. So it was well that a new kind of diversion should be furnished to the town by the arrival of the several authoritative speakers belonging to the Seiyu-kai. The public on the near approach of the time for the opening of the Diet is naturally anxious to obtain trustworthy information as to the attitude Marquis Ito's party is going to take during the next session. In the speeches delivered by Messrs. Ozaki, Takekoshi, Kataoka and Hara in the Sendai-za on Sunday week to an audience of over two thousand people the policy which the party pledges itself to adopt is but dimly indicated. But notwithstanding this the addresses were full of interest. Mr. Ozaki made a point of stating that he gave the meeting his own personal views only and did not pretend to say that they were supported by the association as a whole. The largest theatre in the city was full to overflowing when the proceedings commenced between 12 and 1. Compared with the interruptions that Mr. Hoshi Toru and other political orators encountered a few years ago the disturbance that took place on Sunday was very trifling. A man who was evidently a paid *sōshi* kept shouting out objections to what was being said, or indulged in some harmless chaff at the expense of the speakers. The police seemed at a loss how to deal with him, having been warned not to treat political opponents violently. But one of his own class, as we took it, apparently held in preparation for contingencies, ascended the gallery, tackled the noisy intruder and bundled him down the stairs and out of the building before the police had time to realise what was happening. After that the meeting was quiet to the close.

The following is a report of the chief speeches delivered during the afternoon.

Mr. Takekoshi Yosaburō:—"The subject on which it has been announced I am to speak to you is 'The Present Political Situation.' You hardly need to be told that for some time past popular Government has been established among us. His Majesty the Emperor has graciously deigned to take the people into his confidence, to consult them and act on their advice as far as possible in matters of government. The form of government in this country has so changed in recent years that it is felt now that it would be quite impossible to form a Sat-chō Cabinet. We are undoubtedly committed to constitutional government, which means popular government; and one of the chief objects of the Seiyu-kai is to devise measures for making this form of government a thorough success. But there is one feature of our modern politics to which I wish to call special attention, which is the fact that the great outside world is interested in what we do. There was a time when our politics were regarded with indifference by foreigners. But recent events have brought us to the front. I had no idea of the interest we had awakened in Europe until last year, when I was privileged to make a tour in the West. I found wherever I went that Japanese things and Japanese ways were all the fashion. At restaurants I had dishes set before me that were said to be *à la Japonais*, my friends informed me that dressmakers were advertising costumes that were said to be Japanese in style. At first I wondered whether our popularity extended beyond these things. My mind was soon set at rest on this subject! One day I was trying to find the whereabouts of a Japanese friend of mine. I inquired of a gentleman that happened to be passing. Though he could give me no information himself, he volunteered to endeavour to get it for me. He addressed questions to several other persons whom he met in the road, the result being that no less than seven gentlemen spent quite half an hour in endeavouring to obtain for me the information I wanted. One went to the police office

another to a post office, another examined the records at the Spanish consulate, and so on. When I thanked these gentlemen, they replied that they had often heard people speak highly of Japanese gentlemen, but it had never been their good fortune to meet one till that day, and that thanks were due to me for having afforded them so much pleasure. But more than this, I received from the lips of one of England's greatest politicians his opinion as to the general feeling in Europe in reference to us. I had the honour of dining with the great Liberal leader Lord Rosebery. Our conversation turned on the change that had come over public opinion in Europe in reference to Japan, and Lord Rosebery observed that there were three causes for this: (1) "Your army," said he, "has attracted the attention of the world and all nations feel that a State which can turn out such a force is not to be despised. (2) For a long time it was supposed that you had designs of your own in connection with the Chinese affair; that you intended to utilize the situation for your own aggrandizement in some way or other. But no well-informed person believes this now. (3) People were uniformly of opinion that the civilisation which you had imported into your country from the West was only skin-deep. But we now see that your laws and courts of justice, your political institutions and your system of education afford ample proof that you are at heart entirely one with us, that you and we are members of the same family, as it were." Now you must admit that all this was very pleasing to me. But I thought then what I will say now that a nation which is so highly thought of in the West has to be very careful how it comports itself. You must bear in mind that all our actions are keenly watched, that changes in our Cabinet and the causes of these changes are criticised and commented on by some of the greatest politicians the world contains. The position we now hold, though gratifying, is not unattended with anxiety. And during the past eighteen months several things have occurred which in my opinion have not been creditable to the nation. . . . I was in England when Count Itō's Cabinet was formed, with the Seiyu-kai at its back. I rejoiced at such a consummation. No party had hitherto succeeded in overthrowing a Cabinet. It seemed to me at the time that the situation was so favourable for us that before I left London I ventured to predict a life of 4 or 5 years for the new Cabinet. Its sudden fall came to me like a bolt from the blue. I see now that various circumstances, which were quite beyond the control of Marquis Itō, brought this about. Some people seem to be of opinion that the Minister of Finance was the cause of the overthrow of the Cabinet. Nothing could be further from the truth. Had the Cabinet been otherwise stable Viscount Watanabe's attitude would have caused no serious disintegration in Government ranks. In the first place the Seiyu-kai as a political association was not sufficiently organised and trained to qualify it to take the reins of Government. Marquis Itō went into power against his will and always regarded the experiment as too bold a venture. Then came that unfortunate episode, the opposition of the Peers to what had been declared to be the will of the people. The attitude of the Upper House on this occasion, it was felt, was a blow aimed at the central principle of constitutional Government, the power of the people to regulate taxes of which they pay the principal part. The House of Peers had it in its power to create an intolerable situation for the Cabinet and, in entire disregard of the nation's interests and its foreign relations, it forced the Cabinet to have recourse to an appeal to the Throne. In passing, I may remind you that on this occasion the Kaishin-tō, despite all its grand professions of being the champion of popular government, remained neutral and raised no voice in defence of a principle which ought to be dear to that party as to us. We have no confidence in the present Cabinet. It is rightly called a Reaction Cabinet. It is in our opinion quite incompetent to deal with the delicate situation in which we find ourselves to-day. One or two of its acts I cannot pass unnoticed. It is long since this country has been subjected to the humiliation

of trying to borrow money without being able to get it. The whole affair was bungled from beginning to end; the men who were employed to negotiate the loan were not fit to be entrusted with such a delicate mission. Failing to borrow money abroad the Cabinet is engaged in patching up our finances as best they can, which only means landing us in greater difficulties later on. Then there was the publication by the Home Department of a book whose express object it is to run down constitutional government. Now it is all very well to say that this was done innocently. There was no innocence about it. It is well known that the majority of the members of the present Cabinet see little use in the popular form of Government which is established among us, and think that the country would be more easily governed by a hold-alooof (*chōsenteki*) cabinet of the old type. Holding these views as they are known to do, it was rightly considered quite unjustifiable for a Department of State to give its official sanction to a book containing sentiments subversive of the government that is sanctioned by the Constitution. Whatever private individuals may do, no Government should be allowed to adopt such a method of showing its dissatisfaction with the position occupied by legally established institutions. The present Cabinet may hold on for a few months longer, perhaps until Marquis Itō lands in Yokohama in January, as it is his present intention to do—Cabinets have a habit of falling just as Marquis Itō comes back from some foreign trip. We as a party have unbounded confidence in our leader and we have no hesitation in applying to him the saying:—"Hito-tabi ashi aqureba tenka ugoku" (If he do but lift a foot, the whole world moves). But Marquis Itō has no desire for power at present. It is to the further organisation of the Seiyu-kai that he wishes to devote all his remaining strength. There are several very urgent matters to which the attention of our Government must be called. (1) There is need of a radical change in our educational policy. Successful competition with foreign countries depends chiefly on our possessing a large number of well-educated business men. The chief object of our system of education should be to manufacture them. To train mere scholars and mere officials has been the policy of the Mombushō in the past; to train practical men of the world, so that they may push forward the industry and commerce by means of which alone we can enrich ourselves, must be the programme set before the Department in the future; and the sooner this is fully realised the better. One thing is plain, this country can no longer depend on agriculture as its chief source of revenue. I may also suggest that in education it is a mistake to hold up military heroes like Kusunoki Masashige as models to be imitated rather than any other type of men. The military spirit in the nation needs no fanning, but rather requires modification and checking in many instances. (2) Something must be done to help the peasants out of the state of poverty into which so many of them have sunk. Our Japanese farmers have hardly any capital to fall back on; so that a bad harvest often ruins them. Life is getting harder and harder for the small farmers. (3) The Korean question cannot be shelved much longer. A strong Cabinet will be needed to deal with this.

Mr. Kataoka Kenkichi, President of the House of Representatives:—"My subject is 'The Future of Constitutional Government.' First let me say that the Seiyu-kai thoroughly believes in the possibility of making constitutional government a success in this country, and furthermore that we deem it the only suitable form of government for a nation that has set out on a career such as we have mapped out for ourselves. The object of the foundation of political parties is to facilitate the working of constitutional government. Both the Jiyu-to and the Kaishin-to have aimed at establishing party government, but they did not succeed for reasons that it would take too long to discuss. The Association which we represent here to-day is confident that our constitution can be made to work smoothly if only certain obstacles to success are removed. Depressed by the friction that has existed between the various parties themselves and between different parties

and successive cabinets, some pronounce constitutional government a failure and would welcome its abolition. But to us it seems that to revert to any other form of government than that now established would be a step backward, would be equivalent to saying that the revolution which ushered in the Meiji era was a mistake, and that the nation is now on the wrong track. The causes of past failure are quite clear to all thoughtful people. The situation is in no way hopeless. The mistakes that have been made are just what might have been expected in the case of people quite unaccustomed to take part in governing a country. Instead of condemning the system it is our duty to search for what is wrong in our method of using it. By comparing the working of constitutional government in a country like England with its working here we can discover what is amiss in Japan. Though it would take too long to discuss the subject thoroughly on this occasion, I will indicate briefly what is needed to make party government a success in Japan. (1) It is necessary that the members of political parties should be trained. Hitherto many of them have had no conception of their duties and responsibilities. Again and again members of parties have spoken and acted in a manner that has compromised the parties to which they have belonged. (2) There must be more discipline and more loyalty to leaders. A man who has the confidence of a party and who, it may be, enters a cabinet as its representative must be implicitly trusted and must be given a free hand to act as he pleases in any contingencies that may arise. I may say here that we have the most perfect confidence in Marquis Itô. We think that he is undoubtedly the greatest statesman Japan possesses. (3) Constitutional government can never be a success as long as the free action of the Cabinet is interfered with by such a body as that of the elder statesmen. A Cabinet that is placed in power by the Sovereign and the will of the people should be free to act independently. (4) It is very undesirable that there should be more than two great parties in a country and each party should regard its accession to power as possible and should comport itself accordingly, not forgetting the grave responsibility attached to office-holding. (5) Many of our past failures may be traced to want of resolution. The term 薄志弱行 *hakushi jakkô* (shallow in mind and weak in action) well describes many members of political parties. We want men of great determination, who are ready to sacrifice everything for the sake of their convictions. Good government is not to be obtained by letting things go as they will, by succumbing to small difficulties. Political triumphs in other countries have been the result of the persevering labours of enthusiasts. You, the mass of the people, must support us. Representative Government can only be successful when the people as a whole are well instructed and can understand the great political questions at issue.

Mr. Hara Kei, formerly Minister of Communications, followed with a short speech on the resolutions that had been passed at the meeting of the Representatives of the various branches of the North-Eastern circuit of the Seiyû-kai, held on the 23rd Nov. These resolutions were of a very ordinary type and call for no special notice in this report.

Mr. Ozaki Yukio:—I purpose addressing you on the principles that should control our foreign policy. Let me say at the commencement that the views which I am about to state are my own personal views. I do not pretend to represent Marquis Itô, or anybody else on this occasion. Some ill-informed persons are of opinion that the foreign policy of a country is better left undisturbed by people generally. But that is a mistake. Though every Cabinet is in possession of secrets that should not be disclosed to the general public while negotiations are going on, the main features or outlines of a country's foreign policy should be explained to all those on whose support a Government must depend in time of need. There is no more important subject connected with politics than a Government's foreign policy. At present the situation in the Far East is full of in-

terest. The eyes of all Europe are on China and the question of its future intimately concerns us as a people. Now I may be said to have a very strong leaning towards China. I have made a special study of the Chinese language and have many friends among the Chinese people. But I am bound to say that I see no chance of the country holding together in the face of all the antagonism of various kinds that it has created. There are three things that are necessary to render a country secure in these days. (1) There must be patriotism in the hearts of its people. (2) It must have strong armaments. (3) It must be wisely governed. China has none of these three things. (1) Patriotism is unknown among her people. She has no name for country in the sense that we use the word *kuni*. Country as a geographical term she knows, but the meaning of the word *koku* as used in our *kokka* or *aikoku-shin* is not to be found in her vocabularies. The State then, as understood by us, does not exist in the mind of a Chinaman. All he knows of government is the local control to which he is subjected in his native town or hamlet, what goes on outside is no concern of his. So it happens that the mass of the people care not one straw who governs in Peking or elsewhere, or whether he be a Chinaman or a Russian. (2) The Chinese are the most peaceful race it is possible to imagine. During all the 3000 years of their history as known to us, they have not invented a single weapon that has been deemed in any way formidable by other nations. The wonderful swords which are praised in the classics were made, not of steel but of brass, and were evidently not made to cut, but for ornament. The spears with which for centuries they used to frighten their enemies were so unwieldy that they required three men to handle them. Their warfare up until very recently consisted for the most part of a great display of bunting, a terrible beating of drums, and barbaric yelling. If this did not induce the enemy to flee the Chinaman regarded him with contempt as one who was quite ignorant of the art of war, and he preferred to run away rather than try to kill such a foe. Attempts are being made to convert the Chinese into warriors, but it is all against the grain. It is the opinion of experts that even if a number of common soldiers can be brought up to the scratch in a military point of view, they will lack officers. (3) Their Government is utterly corrupt. It is the highest ambition of a Chinaman to become an official. He has those very stiff examinations to pass before he can become one. Suppose he occupies a post corresponding to a prefect here, he has to buy the office, paying say 30,000 yen for it. He holds office only for about 3 years. His salary during that time is 10,000 yen. And yet the Chinese have a saying, "Three years of office makes three generations prosperous;" that is, the son and the grandson of the official as well as he himself can live in affluent circumstances on the money that he makes while in office.

How is it all done? By extortion and the acceptance of bribes. Now look at Turkey. She has not much patriotism and her government is as corrupt as that of China, but she holds on because her people can fight. Even a great Power like Russia some years ago found the Turks a hard nut to crack. They are a warlike people and so continue to exist as an independent nation. But China lacks all the things on which independence rests and hence in my opinion she is doomed. This then being the situation the notion that we can prop China up is ridiculous. We are powerless to help a State that cannot help itself in any way. Now the great question connected with China is, what is to be our policy there in the near future. The foreign countries that have the greatest interests in China are England, Russia and Japan. No sooner do I name Russia than some people will certainly feel the stirring of angry passions within them. Russia is our mortal enemy, say some. Why? "She forced on us the retrocession of the Liaoting peninsula," is the answer. But were not France and Germany implicated in this affair? Do we hate them as we hate Russia? Certainly not. Now what is the real reason of our aversion to Russia? To my mind it is no other than the fact that we

have swallowed unwittingly that mischief-working germ known as Russo-phobia, which has been transmitted to us by the English press. Why should we hate Russia because the English do? Our policy as a nation must be guided solely by our interests and not by mere sentiment, and in settling what course we should take in China and Korea the first question is not what we would like to see effected, nor how we can use the present situation for gratifying our ambition, but what, all things considered, is the safest course for a country like ours to steer. As for advocating the seizure of Manchuria in order to keep Russia out of it, nothing could be madder than any such scheme. If Japan were to take Manchuria, against Russia's will, as it certainly would be, she would have to be prepared to conquer Siberia as well. No responsible Government in this country will ever embark on such an enterprise. It seems to me that all that is required of us in the present situation is to hold firmly what prestige we have. If it is known that Japan is determined not to allow Russia to swallow up Korea, Russia is not the country to go to war over this question. If it be thought that a country may be had for the asking, in the present mood of Western nations, there will be applicants enough for such a country. We have great interests in Korea and should strongly object to see it under the control of any Western Power. This is a matter in which our interests are intimately concerned. Let us be firm. But when we begin to assume the right of saying what China shall, and what she shall not, grant to another country, we are undertaking a responsibility that may carry us far beyond the limit of our legitimate interests. I see no reason why we should not be friendly with Russia. She has her interests; we have ours. But the interests of the two countries do not clash to the extent of rendering war between them inevitable, as some speakers and writers are fond of representing. Supposing that Russia were to establish a protectorate in Manchuria and govern the country, would not that vast territory be rendered of more value to us than it is now? Trade with Manchuria is almost impossible now, but it would flourish under Russian rule. My idea is that, while preparing ourselves for all emergencies, it should be our endeavour to keep quiet at least for the next fifty years. This will allow time for the development of our resources and the increase of wealth, and when we have more at our back than we have now, we can reconsider the situation in the Far East and set about righting anything that may seem to us to be wrong. I share none of the alarm from which some people are suffering in view of the encroachments of a great Power like Russia. Japan can hold her own on sea or land. There are European Powers like Italy and Holland, for instance, that are not so well armed as ourselves who live in no apprehension of being swallowed up by the great Powers of Europe. The interests of the world are in the main in favour of peace and so war is no longer lightly undertaken as in the days when the issues at stake were less momentous than they are now. Our foreign policy must be characterised by far-seeing wisdom and great circumspection, and we must guard against being led by mere military ambition or by foolish sentiment.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Tetsugaku Zasshi* (No. 176) we find an article from the pen of Mr. Fujii Kenjiro entitled "The morality of a law-governed people." Briefly stated the following are the conclusions reached by Mr. Fujii. (1) Japan is now furnished with an excellent set of laws and has already taken her place among the law-governed countries of the world. But the question is how far is the significance of the new laws comprehended by the mass of the people? Are we governed by law in reality or only in name? Is the morality on which the new laws rest understood by the public generally? I am inclined to think it is not. (2) The revolution that took place at the beginning of the Meiji era shook the foundations of everything, morality included. (3) Since

we were adopting so much from the West the first idea with the leaders of thought in the early years of the new age was to import a new system of morality. This led to great confusion; as Western writers were at the time, and still are, at variance with each other as to what is the proper standard of right and wrong. So in Japan there were those who advocated that every man is competent to decide for himself what is to be followed and what rejected; there were those who preached utilitarianism; there were the disciples of Janet, of Green, of Spencer, and of Kant, and there were advocates of orthodox Christianity, who maintained that Western civilisation rests on Christianity. Amid this medley, Buddhism set forth its claims to be heard on moral questions and began to preach with new vigour its traditional system of ethics. As time went on, it became evident that the lack of authority was a great drawback to the systems advocated and that the influence of the various theories expressed on everyday life was very slight, and so there arose a party which advocated the interference of the State and an authoritative unification of current ethics into one system. But this dream remained unrealized. It is generally felt that our progress in morality has not kept pace with other things. But this is caused by the nature of morality. It is not a thing that can be forced on a people by the Government. To be of any value the moral system of a people must rest on conviction. When it is said that law is more advanced than morality in Japan, this only applies to the laws of the statute books and not to the notions of Western law and its fundamental principles found in the minds of the people generally. (4) Our magnificent system of laws may be compared to the Chinese picture of the dragon that lacked the eye-pupils to make it look life-like. Our laws are at present a *terra incognita* to the mass of the people. A court of justice is to most persons a place to be carefully avoided. Many of those who have made use of the new laws have done so to further their own selfish or wicked ends. So that in the minds of general onlookers the law is anything but the handmaiden of morality. (5) Now it is agreed that the chief principles embodied in the new laws which we have introduced are those connected with personal rights and personal duties and responsibilities. But the very idea of the importance of persons or individuals is not realised in the least by the majority of our people. The conception of the dignity and importance of the individual as a part of the State is quite strange to us as a nation. (6) It is quite true that in the past few decades law and morality have not assisted each other in any way. Moralists constantly speak of the law as a machine for enabling unscrupulous persons to enrich themselves and injure their neighbours. Lawyers, on the other hand, perpetually laugh at moralists as antiquated and ridiculous. (7) Now it is quite evident that all law and all morality rest on the importance of the individual man. Every man has his rights and the administration of justice is nothing but an adjustment of these rights between man and man. Law and morality, then, should work together for the same end. How many of the acknowledged moral evils of the present day may be traced back to a failure to appreciate man's dignity as an individual. What we call *kanson mimpi*, undue exaltation of officials and contempt for ordinary people, and the *danson joshi*, the exaltation of man at the expense of woman; the lack of public spirit; the distrust between man and man, and many other similar things, can all be traced to one source.

In the August Summary, which was published in the *Japan Weekly Mail* on Sept. 7th, were reproduced an article on Religion by Dr. Inoue Enryō which seems to have awakened considerable interest among readers of these Summaries. We intended to furnish an abstract of Art. II. the following month, but owing to Dr. Inoue's absence on one of his lecturing tours its publication in the *Tetsugaku Zasshi* was delayed for three months, and it has only just appeared in No. 177 of that magazine. The title of the article is, "What I call religion." Like the first article, it is of extreme length, covering 22 closely

printed pages, so that anything like a full reproduction of the original is out of the question. Dr. Inoue's style is very easy to understand and his language is a model of clearness and expressiveness, so we would recommend missionaries to study these two articles for themselves. The first, it will be remembered, appeared in No. 173 of the *Tetsugaku Zasshi*. Dr. Inoue Tetsujirō has written voluminously on both ethics and religion and having expressed some very definite views on these subjects, Dr. Inoue Enryō rightly regards him as the leader of a school of thought, and hence thinks it important that his opinions should be discussed in a thorough manner. The views of the two Inoues on religion are as fundamentally different as were those of John Stuart Mill and Sir William Hamilton on philosophy. Dr. Inoue Enryō in his first article dealt with Dr. Inoue Tetsujirō's contention that the ethical element must be made the chief element in religion. To this the reply was that the ethical part of religion is by no means its most fundamental or substantial part; that religion has its roots in spiritual ideas and beliefs as to the Power that lies at the back of the universe; that is, that the essence of religion is transcendental. In the article we are now about to deal with, the two other ideas advocated and defended by Dr. Inoue Tetsujirō are discussed, namely: (1) The notion that a synthetic new religion is capable of being formed. (2) The opinion that the personal element should not be allowed to form a part of the new structure. The following is the purport of what Dr. Inoue Enryō has to say on these two subjects:—(1) I do not object to the notion of forming a religion of the kind referred to by Dr. Inoue by any means. On the whole it meets with my approval. But I see enormous difficulties in the way of its being carried into practice. Dr. Inoue proposes to take the strong parts of existing religions and to leave the weak ones in choosing material for the new creed. He advocates that what appears to us nowadays as inefficient and useless in existing religions should be rejected. But the question is: are the elements objected to weak in themselves or only weak on account of the manner in which they have been taught or used. Are there not many instances where the weakness complained of is remediable? And would it not be a mistake to condemn as useless what has been rendered so by human frailty and perversion? In judging of the quality of the various elements of religion we must not forget that there are cases where things which at first sight appear to be pebbles turn out eventually to be diamonds. Dr. Inoue writes as though discrimination between the elements to be retained and those to be rejected were a very simple matter; whereas it is anything but simple. My difference of opinion with Dr. Inoue on this point may be stated in a few words. What I advocate is:—(a) Let all existing religions be reformed so as to bring them into conformity with the spirit of the age. (b) Then let us set about constructing a new creed that shall not do violence in any way to modern scientific principles. Dr. Inoue is of opinion that existing religions cannot be reformed. Well, leaving other creeds out of account for the moment, I will examine what he has to say of Buddhism. He says that he objects to it on account of the multiplicity of its doctrines and its sacred books and its great complexity. The English language might be objected to on the same grounds. When we open a big dictionary like Webster's we are astounded at the number of the words given, but no sensible person relinquishes the study of the language on account of its comprehensiveness. Though Buddhism is extensive, its essential parts can be stated in very few words. Dr. Inoue says that Buddhism as taught to-day is pessimistic in tone, that it discourages the gratification of human desires, that it encourages asceticism, and the like. Well, supposing that all these elements were removed from modern Buddhism, as in the case of certain sects they have to a very large extent been removed, the life and existence of the creed would not be affected thereby. The Shin priests eat meat and marry. The Nichiren sect has renounced asceticism and all forms of pessimism. And if the real essence of Buddhism be considered, it is a distinc-

tive characteristic of the *Mahanya* (大乘) system of teaching that, though on the surface it may seem to encourage pessimism and asceticism, deep down it encourages the opposite view to such an extent that with a little more development it could be made the foundation of optimism, of world-wide benevolence, of loyalty to the throne and undying devotion to one's country. Even though no immediate steps are taken to adjust Buddhist teaching to the requirements of the age, the tendency is for it to right itself, just as Christianity righted itself three hundred years ago. In the middle ages, Christianity was distinctively pessimistic and made a point of suppressing human desires in every way possible. The founders of Protestantism effectually remedied this tendency.

Now to come to the discussion of the founding of a new religion that shall harmonise with scientific principles, in the first place, the question whether the doctrines of religion should necessarily be brought into agreement with the teaching of science is by no means settled and can only be settled after considerable investigation. But granting for the moment that such an agreement between science and religion is desirable, I maintain that it would prove far easier to alter existing religions so as to bring them into line with science than to form a new creed. Dr. Inoue evidently does not fully realise the difficulty of constructing a new religion out of existing elements. Let us take the doctrines on which religious people agree and leave those on which they differ, says he. But the relative importance attached to doctrines is different according to sects, and more than this, what is orthodox in one creed becomes unorthodox in another. How then is it possible to combine the teaching of the various creeds in a manner that shall command the approval of religious people throughout the world? It is quite plain that Dr. Inoue's proposal has received no support either from scholars like Doctors Katō, Motora and Nakajima, or from the religious public generally. The latter are content to point the finger of scorn at the proposed experiment and to speak of the embryo creed as *Sonken-kyō** or as the *Seitetsu-shū†*. It is quite plain that the scheme is deemed impracticable by all parties alike.

Now science and religion are quite different in nature. Nor is the extent to which it is desirable that they should be known and appreciated the same. The number of people who possess an accurate knowledge of science is very limited, yet the world gets along very well notwithstanding. But I maintain that religion concerns everybody. Premising for the moment that it is possible to found a creed that shall be in essential agreement with scientific teaching, what would be the value of such a production? It would certainly be a colourless, and insipid affair, lacking the power to bring the hearts of men into union with each other. (*Gakujutsu no me wo motte, shushikyō no iteki ten wo torite tsukuri-agetaru shūkyō wa, mumi, mushoku ni sugite, jinshin wo musubi-awashuru koto atau-azu*). It seems to me that to rob a religion of its historical connection and its distinctive character would be to take away most of its charm. Suppose one were to try to make a new dish by removing from bean soup, soy, beef soup and milk all their distinctive flavours, mixing them and subjecting them to distillation, what a flavourless, uneatable medley would be the result! Look at Unitarianism. It is scholarly, to be sure, but as religion it has little power. Then religion has a great deal of aestheticism associated with it and depends for some of its strength on a certain play of the imagination and on traditional elements of various kinds, and hence is something entirely different from branches of knowledge that rest on logic only. It has been found in the history of the world that it is far easier to get people to believe in old things than in new. It is now more than fifty years since Auguste Comte tried to found a new religion.‡ How little was the success that

* Sonken is Dr. Inoue's literary name, (WRITER OF SUMMARY.)

† The character is pronounced *Sei* and the *Tetsu* is taken from Tetsujirō. (WRITER OF SUMMARY.)

‡ The sixth and last volume of the *Philosophie*

attended that movement may be gathered from the fact that some years ago I had to search in the back streets of London to discover the meeting-house of the Comtists and there found a society consisting of about 40 or 50 members only.

Even granting that all existing religions were so corrupt that their reform and revivification were deemed quite impossible, what substitute is there for them? Could the new religion of which Dr. Inoue writes be constructed in ten or twenty years? It is out of the question. It is very easy to destroy what exists, but very hard to build a substitute for it. Even granting for the moment that existing creeds are old and beyond repair, we shall do well to hold on to them till we see our way to getting something better. If a man is unable to build himself a new house, rather than be without any kind of shelter, he will cling to the old dwelling. If the Doctor says he has no hope of the old religions being reformed, I reply that I have no hope of seeing a new religion successfully constructed. Both his opinion and mine are mere theories. What I propose is that a serious attempt be made to reform existing creeds. This will be better than discussing mere theories.

(2) I will now take up the third point on which Dr. Inoue has expressed a definite opinion, the question of omitting the personal element altogether from the new creed which it is proposed to form. Now the notion that you can dispense with the personal element in religion is, it seems to me, founded on an entire misconception of the nature of religion. It is quite plain that religious feeling is not dependent on reasoning and is something altogether extraneous to it. Science is essentially theoretical, religion essentially practical. Science has truth for its object; the object of religion is the comfort of mankind. It is important that science should be colourless and flavourless. But it is essential that religion should be sweet to the taste and should display colour of a pronounced type. But since religion that consists only of emotion is apt to degenerate into superstition, I always maintain that religion should be a body with bones that are intellectual and flesh that is emotional, that is, that the main framework of a creed should rest on knowledge obtained by man's intellectual faculties and that what is added to this should be permeated with emotion. But these intellectual bones that I speak of are neither psychological or ethical, but strictly and purely philosophical. To me religion is the application of a certain part of pure philosophy to life. Hence it will be seen that my view differs fundamentally from that of Dr. Inoue. The doctor often writes in a way that leads one to think that he sees no difference between religion and science. It is difficult to conceive of any perceptible influence over men's minds being exercised by such a religion as presents itself to the doctor's mind. It is because the essential nature of religion is so fundamentally different from science that I say that the personal element is indispensable. So indispensable is it that religions which have started without the personal element have found it necessary to embody it in their system later on in order to satisfy human craving. Philosophy deals with the absolute, the illimitable, the mysterious, the transcendental inseparability or unity of existences.* Religion aims at bringing mankind into contact with the absolute. In order to effect this the limitless one has to be conceived of as though he were limited. The absolute and the abstract have to be turned into the concrete, that is, have to assume personality in order to awaken the devotion of mankind. That personality is no drawback to religion, either in theory or practice, is quite evident. That which our intellects tell us exists everywhere, our feelings tell us is embodied in persons. So it happens that the infinite is transformed into the finite and the absolute assumes personality in order to be better comprehended and more appreciated by mankind. Religion is not content with mere thought, so it gives to abstract ideas concrete forms. The absolute

when contemplated by the intellect appears to us far removed from all the concerns of man. In order to move our feelings it must lose its extensiveness and unapproachableness. Our feelings, and longings knock at the door of the absolute only to find that this being or existence reveals itself to us in personal form. The essence known as the absolute is infinite. Of the real existence of this essence our consciousness frequently testifies. But no sooner do we endeavour to give shape, form and a certain kind of intelligibility to this existence than we find ourselves personifying it. So it comes to this that to be used for religious purposes the absolute must be personified. Men can't be brought to worship a mere abstraction. It would be vain to tell people to worship space. Abstractions as long as they remain abstractions are powerless. No real reform can be effected by them. Religion aims at creating a connecting link between finite man and that infinite, impersonal existence that shrouds itself in mystery at the back of the universe. Religion rises out of a feeling of dissatisfaction at the imperfection of our state in the world, out of a notion that something is wrong which will be in a certain measure set right if we can get into contact in some way or other with the absolute. Though it is one of the functions of religion to dwell on the existence of the absolute, it can never make it known: the absolute must ever remain incomprehensible. That part of it which can be known has assumed human form. This representation of the absolute in human form is what Dr. Inoue describes as the *taiga no koe*, the voice of the great ego. Though this voice may be heard, that from which it proceeds cannot be known. The great ego belongs to a world of mystery that we can not penetrate. But I go further than Dr. Inoue and say that the personified absolute being with which we are acquainted, the great ego in human form is more than a mere voice, it is the revelation of the nature of the divine being. My point is this, all the great religions of the world have personified ideas, have made their objects of worship assume human shape, because it has been discovered that ideas are only powerful when presented to the mind in this form. But I am not of opinion that the idea of personality is the main basis of religion. Undoubtedly primarily religion is based on the real existence of the absolute and the mysterious and on what we Buddhists call 平等 *byōdō*, the essential inseparability and thorough identity of all existences whatever. But this basis would be of little use did we not believe that divinity reveals itself in the heart of man. Thus we come to the truth that a single being may take different forms. We Buddhists believe in a trinity in unity (三身一性 *sanshin ittai*). It is one of the duties of religious teachers to speak both of the all-pervading spirit of the universe and of the form of divinity that is within us.† If Christianity contents itself with preaching Christ, that is, with dwelling only on the personification of the Divine essence in a high type of man, it cannot be considered to have reached a lofty standard as a religion.

This article has been written solely with the purpose of opposing Dr. Inoue and in it I have not attempted to state my own religious views fully. This I purpose to do on some future occasion. I am a strong believer in the power of religion. I believe that we can rely on it as a teacher where neither politics, ethics, science nor philosophy can help us. This is why it has held its own as ages have rolled by, and this is why it will never be abandoned. When Dr. Inoue came forward and represented that religion is only useful as a basis of ethics and

* The Buddhist term 平等 *byōdō* used here has no corresponding word, as far as we are aware, either in German or English. The German *gleichheit* and the English equality do not convey the idea expressed in the above term, which we have attempted to paraphrase in the text.—(WRITER OF THE SUMMARY.)

† Many noted Buddhist sayings teach this doctrine: such as 自心是佛 "Your own heart is Buddha"; and 身佛無別 "There is no difference between self and Buddha." That is Buddha is within you, seek him not beyond yourself. This part of the article is thoroughly pantheistic.—(WRITER OF THE SUMMARY.)

that it has no claim to our homage in any other capacity, I felt that he was, as it were, assassinating religion, and that I could not stand by unconcerned while such an outrage was being perpetrated.

The introduction of Mormonism into Japan forms the subject of numerous short articles in the month's magazines. In the English part of Dr. Masujima's magazine, the *Shunju*, appears a letter signed Elizabeth P. Hughes. This writer had only been two months in Japan when she wrote, but she seems to have made a study of Mormon tenets and ways in America and has come to the conclusion that Mormonism is politically dangerous, being a menace to good citizenship and the unity of a nation. Dr. Masujima comments on this letter, urging the Government to forbid the propagation of the creed in this country. The *Shin Bukkyō* publishes a satirical article on the same subject entitled "Welcome to the Mormons?" in which the writer states, with what amount of truth we cannot say, that there is great joy among some of the younger priests that at last a form of religion has come to this country which sanctions the polygamy they are so desirous of practising.

No. 1,106 of the *Keizai Zasshi* has an article entitled *Fujika no mon*, Cross-crests, which is full of interest from a religious and an antiquarian point of view. The writer is Mr. Namatame Tsunenori. The matter published contains valuable testimony on the extent to which Christianity spread in Japan in the latter half of the sixteenth century. It was the custom then for Christians to wear a special crest with the sign of the cross visible in some part of it. The *Keizai Zasshi* furnishes pictorial representations of these interesting relics. These crests in a very large number of cases became family badges and superseded those previously in use. For a long time the Bakufu succeeded in concealing these evidences of the popularity of the new faith, but, fortunately, they were not destroyed. They show conclusively that there was not only a large number of samurai but also not a few noblemen who professed Christianity at that time. In some cases the form of the cross was embedded in foliage or so surrounded by other devices as to be only perceptible to the initiated. In other cases the outline was purposely rendered indistinct by a slight deviation of one of the lines that formed the cross. In this manner the emblem was made to serve the purpose of a free-mason's sign, which meant something to the initiated only. The *Keizai Zasshi* publishes 24 illustrations of the different forms these cross-crests assumed.

In the Summary of Japanese Current Literature published in these columns a few weeks ago reference was made to Dr. Inoue Tetsujirō's article entitled, "The Past and Future of Education." A writer in the *Kokumin Shimben* signing himself "Kashū" takes objection to the views expressed by Dr. Inoue on the question of teaching religion in schools in the following terms:—I am not of opinion that it is impossible to teach morality in schools without the aid of religion. But at the same time I see no reason why religion should be banished from schools, and when Dr. Inoue goes as far as to say that it is the teaching of the Imperial Rescript on education that religion is to be kept out of schools, I cannot forbear entering a protest against such an interpretation of the general language used in the said Rescript. There is no warrant for interpreting the Rescript as Dr. Inoue does, in the face of the clause of the Constitution which grants full liberty in religious belief. Dr. Inoue speaks of all existing religions as superstition, without furnishing any proofs whatever of the correctness of his opinion. He says that the introduction of religion into schools must imply the encouragement of sectarianism. But this by no means follows. The chief use of religion when associated with education is to develop a noble type of character and we think that as a rule those who teach religion in schools are by no means ardent sectarian partisans. But we would point out to Dr. Inoue that if he wishes to lead a crusade against sectarianism, he had better attack the

Positive appeared in 1842. The *Positive Polity* was not finished till 1854.—(WRITER OF SUMMARY.)

educational clannism that already prevails, and which does so much harm to the cause of education. Far more evil is caused by the squabbles and jealousy of the Daigaku-ka and the Mei Kei-ha (High Normal School party) than would be caused by the teaching of religion. Let Dr. Inoue attend to the beam in his own eye before attempting to cast out the mote from his brother's eye.

* * *

Judging from what we read in Christian magazines and newspapers there is at present a great deficiency of evangelists. The *Tōkyō Maishū Shinshū* in an article entitled "Students and the Evangelistic work," treats the subject as follows:—The Japanese Christian Church is essentially a Students' church (*Nihon no kyōkai wa seinen no gakusei no kyōkai nari*). In every church more than half the members are students. According to the statistics published by Mr. Loomis at the beginning of the year, the Nihon Kirisuto Kyōkai (Presbyterian) has 4,737 male converts and 3,560 female converts; the Kunitai Church (Congregational) has 5,222 males and 4,904 females. This preponderance of males is in both cases caused by the large number of Christian students in these churches. This is peculiar to Japanese churches, for in Europe and America the preponderance of women is very marked, the males in many churches not exceeding a third of the total number of members. Among those who joined the church as a result of the evangelistic services held this spring seven or eight-tenths were students. In the church with which the present writer is connected at Reinanzaka, among 65 persons recently added to the Church roll no less than 43 were students. Though from one point of view the accession of so many young people is a cause of gratification, when it is borne in mind how few of those who profess Christianity offer to undertake evangelistic work, a feeling of dissatisfaction comes over us. There are more than ten Divinity Schools in Japan, but they all complain of deficiency in the number of candidates. The Dōshisha may be taken as an example of the rest. Ten years ago it had as many as 80 divinity students. Now it has only a little over 10. And the students who do offer themselves for evangelistic work are as a rule quite inferior in character and scholarship to the men who graduated at Divinity Halls ten or twenty years ago. Preaching Christian students are scarce. Though there are plenty of young men who talk grandly about the welfare of the people and of the state, and the like, youths who are prepared to devote themselves entirely to the service of Christ are very rare. There are some no doubt who would like to do more for the Christian cause were their worldly circumstances somewhat more prosperous. But they find that all their time is taken up in making a living. In addition to all this it is undoubtedly true that the uncertainty of obtaining from the church sufficient money to live on is a great deterrent to young men's offering themselves for evangelistic work. The position occupied by pastors and evangelists in this country is much lower than it is in Europe and America, where the minister ranks as high, if not higher than, the master of a school. One reason of the present state of things is that Japanese Churches are content to allow evangelistic work to be carried on in the foreigner's way and at the rate of pay which he considers sufficient. This it is that hinders the development of strong churches in Japan.* The method of evangelisation followed by the missionaries is abnormal. (*Koko ni hitotsu no hensoku naru dendō soshoku aru yume nari—Konnichi no Mission Shūgi no dendō hōhō nite, gaikoku dendōshi ra toru tokoro no dendō soshoku, kore nari. Kono hōhō ga kenzen naru kyōkai no hattatsu uo sametaru*). There is no way of raising the status of pastors and evangelists

* In reply to a letter on this subject from a Missionary, that appeared in these columns a few weeks ago, we may say that personally we agree with the writer entirely. But the article we summarised last month and the one we are epitomising now both maintain that the low status and small pay of evangelists are the consequence of their being supported out of Mission funds.—(WRITER OF THE SUMMARY.)

and placing church work on a stable financial basis while the money used for church work comes from abroad. Financial independence and thorough self-support must precede any radical change in the status of evangelists.

PRICES OF COMMODITIES.

According to investigations made by a trustworthy source the price of commodities during last November showed a slight falling off as compared with the previous month. Taking the ratio of prices in January, 1887, at 100 as a standard the general average quotation in November stood at 174, against 177 last October, being a decrease of three for November. The price of articles in November last year was represented by 181, showing a rise of seven as against November this year. Below is a table showing the comparative figures for November and October this year:—

FOOTBALL.

It speaks well for the muscular energy of Yokohama football players that two full teams took the field on Saturday afternoon—for the fun and frolic of St. Andrew's Hall had been long drawn out. The colours won by three goals to one, the goal-kickers for the winners being Sydney Wheeler one, and Kilby two. As the season advances the men are getting into form and now and again on Saturday some very decent play was seen; but the shooting in front of goal is lamentably weak and the Captain of Football should see to it that his forwards get more practise in this particular line of work. The Moss Brothers both played well; Read, as usual, was keen on the game and put in some good work when transferred to the outside wing; Wheeler and Kilby were meritorious, and Pollard steady and sure.

For next Saturday a most interesting match is down upon the slate. Messrs. Tanaka and E. B. Clarke—two Rugby enthusiasts—have been training a team of Japanese students in Tokyo for

some time past, and these players will meet a Y.C. and A.C. Fifteen in Yokohama on Saturday next. The event should draw a big crowd to the Cricket-ground for this will be the initial appearance of a Japanese football combination upon our ground. Details of the teams will be published during the week.

The third match between the Association teams of the Y.C. and A.C. and H.M.S. *Goliath* took place on the Cricket-ground on Thursday afternoon and resulted in a win for the home eleven by three goals to one. Yokohama thus wins the rubber. All the goals were made in the first half, and the play at no point was very brilliant, the Navy making but an easy defence. Fradgley, as usual, played with judgment and Kilby and Moss also showed up at times. Mr. Williams, for the Navy, was in fair form.

"ATLANTIS."

The benefit performance of Miss Atlantis, the spectacular dancer, which was given on Monday evening proved very successful. There was a bumper attendance, though many who had booked seats found themselves unable to be present. As will be seen from the programme which we give below, the entertainment abounded with variety, and the dances of Atlantis, especially, were warmly applauded. Everything went off capitally. The programme was as follows:

PART I.

OvertureOrchestra.
Spear and White.
Irish and German Comedians of U.S. F.S. *Brooklyn*.
Glee: "Over the Sea to Sky"
By Messrs. Morris, Judge and Atherden of H.M.S. *Goliath*.
A Humorous Lecture
By C. Slee, of H.M.S. *Goliath*.
D. M. Carruthers of U.S. F.S. *Brooklyn*.
"He has Chickens on the Brain."
Hagerty and Mahoney of U.S. F.S. *Brooklyn*.
In their Original Sketch.
"One Thousand Pounds Pressure."
"You can't take a rise out o' oi" by G. G. Brady.

PART II.

OvertureOrchestra.
(1. Butterfly Dance.
Atlantis (2. Fire Dance.
(3. Serpentine Dance on Revolving Globe.
"Ostler Joe."
A Recitation by T. Williams, of H.M.S. *Goliath*.
Campbell and Davis, of U.S. F.S. *Brooklyn*.
In their Original Sketch "A Close Shave."
Concluding with Rag Time Songs, Dances, and Cake Walk.

The Silent Absurdity, entitled
"The Rival Lovers."
Cast of Characters.

Scrapum.....The Barber.....C. Slee.
Soppy Fritz.....The Rival Lover.....A. Middleton.
Mrs. Bunkum.....The Mother.....W. Debenham.
Miss Lunkum.....The Barber's Sweetheart.....J. Markland

HOME SWEET HOME.

THE SECOND ITALIAN CONCERT.

The second Concert, given on Thursday evening at the Public Hall, Yokohama, by Miss Mastropasqua and Mr. and Miss Gentile, assisted by some local amateurs, proved an unqualified success. On the occasion of the first concert given by the trio without local assistance on the 11th Oct. last, the public of Yokohama had no idea of the true merits of the artistes, and the attendance was consequently somewhat limited. But that performance proved that the small company well deserved better support, and this was demonstrated by a full house last night. The programme included a number of new items, but we must say that we regretted to

find that no number for two pianos, in which Mr. and Miss Gentile scored such a success at the last concert, appeared on the programme. Miss Van Daalen, in company with Miss Gentile, in the second part, however, made up for this omission, as also in the duet in the first part. The instrumental music was fully up to the standard of the first concert, and we can say no more in praise of it. Miss Mastropasqua was in splendid voice and was vociferously applauded for her rendering of the solos from *Traviata* and the *Pecheurs de Perles*. Mr. Gentile displayed his thorough mastery of technique and his artistic expression in his piano solo from *Sonnambola* and was warmly thanked. Mr. Atkinson gave a very fair rendering of the solo from *Faust*, and Mr. Poole received the plaudits of the house for his artistic interpretation of Mr. Gentile's compositions, *Tristesse* and *Gavotta*. The last item, a trio for violin cello and piano, by Messrs. Davis, Dubraveich (of Tokyo), and Gentile, was also received with applause; in fact *encores* were the order of the evening. The programme was as follows:—

PART I.

1.—PIANOFORTE DUET—
"Danse Macabre" *Saint Saëns*.
Miss GENTILE and Miss VAN DAALEN.

2.—SOPRANO SOLO—"Traviata" *Verdi*.
Miss MASTROPASQUA.

3.—PIANO SOLO—"Sonnambola" *Thalberg*.
Mr. GENTILE.

4.—BARITONE SOLO—"Faust" *Gounod*.
Mr. ATKINSON.

PART II.

1.—2 PIANOS—"Capriccio brill" *Mendelssohn*.
Miss GENTILE—Miss VAN DAALEN.

2.—VIOLIN SOLO—
(a) "Tristesse"—Romance..... } *Gentile*.
(b) "Gavotta" }
Mr. POOLE.

3.—SOPRANO SOLO—"Pecheurs de perles" *Bizet*.
Miss MASTROPASQUA.

4.—TRIO—Violin, Cello and Piano..... *Mendelssohn*.
Messrs. DAVIS, DUBRAVEICH, GENTILE.

FIRES IN YOKOHAMA.

Another fire, the third within a very short space of time, took place on Wednesday morning. In this case incendiarism is suspected, though the actual means employed can hardly be even guessed at. As may be recollected, a similar suspicion existed with regard to the origin of the conflagration which, starting in a Chinese tailor's shop spread to and destroyed the Oriental Hotel, so that in two out of three cases it seems difficult to attribute the affair to pure accident. In this particular instance, we gather, the flames broke out in the office of Messrs. Daniel and Coutts which is on the ground floor and on the right side of the hallway entering from Water Street, the corresponding accommodation on the opposite side being occupied by Mr. B. Munster. It is stated that when Messrs. Daniel and Coutts' office was closed the previous evening, no fire remained in the grate and in some quarters it is believed that the outbreak occurred in the rooms above, which are occupied by Mr. Williamson, the remainder of the upper storey being the offices of Messrs. Bisset and Ure. Mr. Williamson, however, declares most positively that when, called by the *momban* he got hastily out, his rooms being then filled with smoke, and went downstairs, the flames were then showing from the office below. At any rate this gentleman had a very narrow escape. He hastily huddled on a few articles of clothing, snatched up a watch (he had two, one of brass the other of gold) and with this valuable, the only thing that he saved besides what he stood in, he sought the open air, only to find when he had got the smoke out of his eyes that he held in his hand the brass timekeeper. The flames spread very quickly. Firemen from the Police and Satsumacho Brigades, the latter in charge of Supt. Morgan, were promptly on the spot and by means of a copious supply of water confined the fire to the building in which it originated, and so saved the two godowns adjacent. There were half-a-dozen stand-pipes in use, and one steamer was also at work. Once subjected to heavy streams of water the flames subsided, leaving the

building practically in ruins the wooden framework and the chimneys alone standing. As to these it is to be hoped that no time will be lost in pulling them down. The Oriental Hotel was burned down on Nov. 17th and it was only on the morning of Dec. 4th that a beginning was made to throw down the thin brick walls of which large portions had remained standing for 16 days to the serious danger of all persons who passed along Water Street or thence to the Bund. Water Street at No. 23 is very narrow, and the danger there is even greater.

The property is owned by Messrs. Jardine, Matheson and Co., and is covered by insurance to the amount of yen 10,000 in the Hongkong Fire. We learn that Messrs. Bisset and Ure saved their more valuable papers but some rather important books have been destroyed.

The insurance was distributed as follows:—Commercial Union, office furniture Messrs. Bisset and Ure, yen 2,250; Palatine, Messrs. Daniel & Coutts, office furniture yen 200; Hongkong Fire, Mr. B. Munster, office furniture, yen 1,500; Lion, Mr. Williamson's effects, yen 1,500; Hongkong Fire, buildings yen 7,500, and outhouses yen 1,250.

Fire broke out about 6 a.m. on Thursday in the upper floor of a house at No. 185, Honmura Road, Yokohama occupied by Iida, the butcher. A minute's use of a hydrant put out the blaze, which is believed to have originated with an incense-burner. Fortunately the affair happened in the morning or the results might have been serious.

An auction of the relics of the Oriental Hotel' Yokohama, was held on Friday, at the scene of the late fire, Mr. John W. Hall acting as auctioneer. There was a fair attendance. The property was put up in eight lots and the result was as follows: Electric light plant, yen 1,300; contents of building yen 475; debris of building yen 19. The time limit for the removal of the debris is December 20th, under a heavy penalty.

An explosion of fire damp is reported from Fukuoka. The accident occurred on Nov. 29th in the Takamatsu colliery and three miners were badly injured. The cause of the disaster is unknown.

Fire broke out at Isurugi, a town in Toyama Prefecture, on Nov. 28th, and over 150 houses were destroyed. No loss of life is reported.

In Sendai on Dec. 3rd, three houses were destroyed by fire. The disaster originated in live ashes ejected from the chimney of a train.

An extensive fire took place in Uwa district, Ehime prefecture, on Nov. 28th, resulting in the destruction of 330 houses.

On Dec. 3rd, a fire occurred in Sakai-machi, Otaru, Hokkaido, and 65 houses were destroyed.

LAW CASES.

ARAKI VERSUS GROSSER AND CO.

In the Yokohama Chihō Saibansho on Friday morning, before Judge Yasuda, was heard an action brought by Mr. Araki Shigeji, a *sake* dealer of No. 10, Ichhome, Demma-cho, Votsuya, Tokyo, against Messrs. F. Grosser & Co., No. 180, in the former Settlement, Yokohama, claiming repayment of bargain money amounting to yen 4,000. Mr. Saito appeared for plaintiff and Mr. Nagashima for defendants.

Counsel for plaintiff stated that his client made a contract with plaintiff for a supply of 1,500 casks of gin, the delivery of which it was arranged should be made during the period from March to May last year, and as bargain money plaintiff handed over to defendants the amount mentioned on the 9th of March last year. On the maturity of the contract date, however, defendants did not deliver the goods.

Counsel for defendants admitted the above statements, but remarked that in the contract there was no fixed date on which the goods were to be delivered.

Owing to the necessity of presenting essential documents as to the details of the case the Court was adjourned *sine die*.

By the way, it may be remarked that the defendants imported the liquor in anticipation that the Customs tariff would only be 4 per cent. but when it arrived at Yokohama the Customs authorities insisted upon levying a duty of 250 per cent. The present dispute will probably be settled privately.

ARAI HIKOTARO v. J. W. HALL.

In the Yokohama Chihō Saibansho on Saturday morning, before Judge Kano, the hearing was resumed of the suit instituted by Arai Hikotaro, Yamashita-cho, against Jno. W. Hall, No. 61, Yokohama, claiming repayment of bargain money amounting to yen 500, together with six per cent. interest per annum from the 4th of February last until execution of judgment.

Mr. Uyeno appeared for plaintiff and Mr. Akiyama for defendant.

As previously stated in these columns, plaintiff's case was that he purchased two houses, one covering 367 *tsubo* and the other 41 *tsubo*, at No. 746, Nakamura, Kuraki district, Kanagawa prefecture, at an auction held at Mr. Hall's auction room some time ago, and as bargain money handed over to the defendant the sum mentioned above. Plaintiff, however, subsequently found that the houses remained registered in the name of Mr. Hosoi Nao and therefore he could not obtain legal registration of their transfer.

Counsel for defendant contended on Saturday that as every one knows an auctioneer carries on his business generally in compliance with instructions from other people who entrust their articles to him for sale, but that he as well as other auctioneers no matter who they may be, had nothing to do with the matter of registration so far as his business is concerned. In conclusion, Counsel argued that in view of the above fact his client could not recognize plaintiff's claim. Judgment will be given on Dec. 5th at 10 a.m.

Judgment was delivered in the Yokohama Chihō Saibansho on Thursday morning, by Judge Kano, in the case of Mr. Arai Hikotaro, No. 134, Yamashita-cho, Yokohama, against Mr. Jno. W. Hall, No. 61.

Plaintiff's case was dismissed with costs.

As already reported, plaintiff purchased two houses in the Kuraki district of Kanagawa prefecture, at an auction held at Mr. Hall's auction room some time ago, and as bargain money handed over yen 500, which sum plaintiff asked should be repaid on the ground that as the houses remained registered in the name of Mr. Hosoi Nao he could not obtain legal registration of their transfer. To this defendant objected for the simple reason that he had nothing to do with the matter of registration so far as his business is concerned.

CORNES VERSUS TANIGUCHI.

In the Yokohama Chihō Saibansho on Saturday morning, before Judge Kano, was heard an action brought by Cornes & Co., No. 50, former Settlement, against Taniguchi Kumataro of Nihon-bashi, Tokyo, claiming payment of yen 6,074.442 damages together with 12 per cent. interest per annum from April 2nd till the settlement of the present case. Mr. Sato appeared for plaintiffs and Mr. Nakamura for defendant. Counsel for plaintiffs stated that on defendant's order plaintiffs imported five boxes of white shirtings and a quantity of brushes last year, but defendant failed to take delivery of the goods. In consequence plaintiffs were obliged to sell them by auction in April and this year with the result that they incurred a loss which compelled them to bring the present claim.

Counsel for defendant contended that though the goods arrived during the contract date yet plaintiffs did not notify defendants of the arrival of the goods in due course of time as fixed in the contract. The notice of arrival was made by plaintiffs as late as March 5th this year. The hearing was adjourned till Dec. 24th, at 10 a.m.

FISCHER VERSUS WESTON.

In the Yokohama Chihō Saiban ho on Monday morning, before Judge Yasuda, the hearing was

resumed of the case, adjourned from Nov. 11th, brought by A. F. Fischer of No. 88, Yamashita-cho, Yokohama, against A. Weston of No. 41.

Plaintiff claimed from defendant yen 1,457, with five per cent. interest per annum from the 1st of December, 1899, until the execution of judgment, for breach of contract.

Mr. A. R. Owen, of the Canadian Pacific Railway Co., No. 14, Bund, was called as a witness.

The Court enquired of him whether the goods in question were still stored in the company's godowns in Canada. The witness replied that he did not know exactly the fate of the goods but that if a telegram were sent the matter could be clearly ascertained.

Owing the non-appearance of Counsel for defendant the proceedings were adjourned *sine die*.

It may be stated that according to previous statements in Court the plaintiff in October, 1899, made a contract with defendant, whereby the latter agreed to forward a piano and other articles to Canada for the purpose of selling them there, the goods having been obtained from Hongkong. Plaintiff, however, alleged that he received no reply from defendant even after the expiration of the contract date, as to whether the goods were sold or not.

TABEI VERSUS SALE.

In the Yokohama Chiho Saibansho on Thursday morning, before Judge Kano, a suit brought by Mr. Tabei Fusabei, No. 13, Itehome, Otamachi, Yokohama, against Messrs. Sale & Co., Limited, No. 94, Yokohama, came up for hearing. Plaintiff was represented by Mr. Kawada and defendants by Mr. Sato.

Plaintiff claimed from defendants the delivery of four boxes (containing 30 *tan*) of flannel and the payment of yen 179.17.

Counsel for plaintiff stated that on Nov. 24th, 1899, his client made a contract with defendant whereby the latter were ordered to import eight boxes (containing 240 *tan* in all) of flannel of English make. Upon the arrival of the goods at Yokohama, plaintiff took delivery of four boxes by paying yen 2,271.22 in cash. With regard to the remaining four boxes, plaintiff entered into an agreement with defendants to the effect that as plaintiff found it impossible to effect immediate delivery in consequence of business depression in the interior he should be entitled to take delivery of them by paying yen 200 when the tone of the market revived.

Counsel for defendants admitted the above statements, but remarked that one box out of the remaining four boxes in dispute was taken delivery of afterward by plaintiff, and he paid for it. As to the three boxes remaining undelivered, defendants received from plaintiff yen 520 as security-money for the remaining lot, but despite the request subsequently made by defendants on the maturity of contract date plaintiff failed to respond.

Proceedings were adjourned till Dec. 24th when Mr. Ono, a Japanese *bando* in the defendants' office, will be examined as a witness.

On Sunday afternoon a man named Fujiwara was arrested by the Yokohama police on a charge of theft and sent at once to the Yokohama Local Court for trial. It appears that the man was a servant of Mr. M. Pors at No. 46 Bluff, and that on Nov. 11th he stole from his master silver plate to the amount of yen 84, which he pawned afterwards for yen 6.50.

An action in the form of a counter-claim brought by Mr. Z. B. Hammond, No. 108, Yokohama, against Mr. Otani Sobei, a butcher of No. 90, Nichome, Motomachi, which was expected to be heard in the Yokohama Chiho Saibansho on Dec. 4th was postponed indefinitely.

The thief who stole some eight hundred yen from a safe in the Standard Oil Company's office at No. 8, Yokohama, last Saturday night was arrested at Atami on Wednesday by a detective of the Kagacho Police Station, Yokohama. He is named Hirano Yonejiro, aged 22 years and had formerly been in the service of the company.

THE CENTRAL AMERICAN TROUBLE.

TO BOMBARD COLON.

A telegram dated London Nov. 26th is translated by the *Kobe Herald* from an Osaka journal as follows: The Commander of the Colombian gunboat *Pinzon* has notified the various consuls that it is his intention to bombard Colon to-day. Railway traffic is at a standstill, and the foreign population have gone aboard the warships. The Commander of the United States cruiser *Machias* refused to allow Colombian troops to land, and the Commander of the British cruiser *Tribune* is co-operating with the Americans.

[The *Tribune* is a second class cruiser commanded by Captain K. S. Rolleston.]

The *Kobe Herald* prints the following London telegrams giving some details of the situation in Colombia:—

London, Nov., 28th, 5.25 p.m.

The Insurgent forces have surrendered Colon, owing to the presence of an American officer, Captain Perry, and the Colombian Government now holds the city. The United States marines have withdrawn and an amnesty (?) to rebels in the city) has been guaranteed.

London, Nov. 29th, 6.15 p.m.

Fighting is reported at Buenavista (on the railway between Colon and Panama). The railway is blocked with the dead, and the Insurgent forces claim a victory.

The rebels and the Colombian Government are to hold a conference to-day aboard the United States war-ship *Maricita*. The Insurgents are expected to surrender.

FOREIGN TRADE.

According to investigations made by the Finance Department, the general condition of foreign trade at Yokohama and eight other open ports during the last ten days of November showed that there was an excess of exports over imports of yen 1,600,000. The excess of exports over imports during the whole of November amounted therefore to more than yen 8,150,000. There was also an excess in the export of gold which amounted to over yen 390,000 in value during the last ten days of the month. Below is a table showing the value of exports and imports:—

	Last 10 days of November. Yen.	From January Yen.
Exports	8,569,500	227,702,781
Imports	6,905,991	238,487,574
Balance	1,662,509	10,784,793
Gold exported	550,404	11,317,852
Gold imported	154,283	10,176,400
Balance	395,121	1,141,452
Silver exported	41,272	2,447,925
Silver imported	11,800	268,754
Balance	29,472	2,179,171

Yokohama:—The trade at this port during the last ten days of November showed an excess of exports over imports by over yen 1,700,000 in value, although shirtings, cotton thread, etc., were imported in comparatively large quantity as compared with the previous ten days of the same month.

Kobe:—Trade showed an excess of imports over exports by over yen 67,000 but an excess of exportation of gold owing to the fact that yen 500,000 worth of Japanese gold coins was shipped to America and yen 50,000 worth of the coins to Hongkong.

Osaka:—The city had an excess of exports amounting to over yen 500,000 in value and received a large quantity of gold bullion which was ordered by the Mint there.

Nagasaki:—Showed an excess of imports owing to arrivals of coal, iron material from England, and raw cotton from China.

Hakodate:—Saw an excess of exports in consequence of shipments of sulphur to the United States.

Niigata:—No exports, but large imports of fish from Siberia.

A SHANGHAI INCIDENT.

The *Fiji Shimpō's* Shanghai correspondent telegraphs that the Manager of the Russo-Chinese Bank at that port has been black-balled at the club. There may be some special personal reasons for such a step, but the public will naturally connect it with the action recently taken by the Bank in calling in the over-drafts of two important cotton-spinning companies, thus partially if not completely ruining them. Much resentment has evidently been caused in Shanghai by that incident, but since the Manager acted upon instructions from home and since, moreover, he was strictly within his rights, it is difficult to suppose that his act was considered deserving of social ostracism. There must be some other cause not apparent to outsiders.

AMERICAN TOPICS.

The annual horse show in New York is expected to be eclipsed by the forthcoming automobile show, at which it is said there will be exhibited an auto capable of making seventy miles an hour on a smooth road.

General Chaffee has recommended to the U.S. War Department that Lieutenant Russell T. Hazard, First Cavalry, commanding the Macabebe Scouts, be given a medal of honour for entering the camp of the insurgents with a few scouts at night in order to effect the capture of a deserter, which he accomplished.

The U.S. torpedo-boat destroyer *Chauncey* was launched on Oct. 26. Mrs. Mae Chauncey Stevens Todd christened the vessel. The *Chauncey*, which is a sister ship of the *Bainbridge*, launched some time ago, and the *Barry*, now being built, is 245 feet long and twenty-four feet beam, with four cylinder triple-expansion engines and Thornycroft boilers. Her speed will be about 29 knots.

A dispatch from Monterey, Mexico, says the workmen employed in the Veladora mine, situated near there, the other day opened up a large cavern by means of a tunnel. In the cave were found the skeletons of fifteen men, surrounded by ancient mining tools. Piled up in the cavern was more than two carloads of horn silver and galena, interspersed with wire silver, all of great richness. The old Spanish records show that this mine was worked more than 200 years ago, and the skeletons are those of miners who are supposed to have been suffocated by a cave-in.

A cable to the *New York World* from Budapest said—A brilliant career was cut short in the death of Joseph Virog, inventor of a marvelous rapid telegraph system, at the age of 31. Virog and Pollock, two electrical engineers, applied an optical telephone which they had invented to telegraphy and succeeded in telegraphing 80,000 words an hour. The inventors improved the machine until they obtained beautiful, clear writing on the receiver. This was so valuable that for its sake they reduced the speed to 40,000 words. The invention is now complete. Virog was seized with virulent fever and died in three days.

In his annual report the U.S. Commissioner of Pensions discusses at length the faults of the present system of pensioning and the difficulties in the way of determining the merits of claims for pension and increases. In January, 1900, a rule was adopted requiring guardians of pensioners to render to the bureau annual accounts of their receipts and expenditures of pension money. The rule was followed by disclosure which in some instances were of a startling nature. Guardians were found to be drawing pensions long after the death of their wards. Many cases were found where insane pensioners had been placed in asylums and other public institutions as indi-

gent persons, while the guardians had drawn the pension during the whole period.

Mr. William Waldorf Astor has prepared plans for the largest and most palatial family apartment hotel on Manhattan island. It will occupy the entire block bounded by Seventy-eighth and Seventy-ninth streets, Broadway and West End avenue. The building will be nine or more stories high and will cost over \$2,500,000. The architect will endeavour to provide spacious apartments rather than a multitude of rooms. This will rank the hotel among the most exclusive structures of its type and the rentals for single apartments will run as high as \$10,000. The old mansion now on the block has been a famous landmark. It was built in 1759 by Cornelius Vandenheuevel, Governor of Demerara. All of the material was imported from Holland and was the very best of the colonial days. The property came into the Astors' possession through the original John Jacob Astor, who married Miss Gibbs, the grand-daughter of Governor Vandenheuevel.

M. Pierre de Segur gives a highly interesting account in the current issue of the *Revue de Paris* of the reception given by the Kaiser on board the *Hohenzollern* to a party of French tourists at Odde. Although the event took place far back in July, the statements attributed to the Kaiser before his guests are none the less important at this juncture. "His conversation with us," writes M. de Segur, "was chiefly about America. He evidences but slight enthusiasm for that country. To him there is a menace for the future in the colossal trusts, so dear to the Yankee millionaires, which tend to place an industry or any international exchange in the hands of a single individual. He believes Europe should unite to beat back the great danger to home trade from the American trusts."

The U. S. Navy Department has selected Lieutenant Commander Southerland to succeed Captain C. C. Todd as chief hydrographer of the Navy, and orders have been issued detaching him from the command of the *Dolphin*. Commander Southerland has come to be regarded as an expert in hydrographic work. He made the most definite survey yet accomplished of the mouth of the Amazon, and, although the work was conducted from the *Dolphin* with great difficulty, owing to the lack of suitable appliances and the constant heavy swell on the bar, that obstacle to navigation was successfully and accurately charted, a work of much value to commerce. While in command of the *Dolphin*, since that vessel has been laid up at Boston for repairs Commander Southerland has been serving in the Navy Department as naval aid to Secretary Long. Lieutenant Commander Albert Gleaves has been ordered to the command of the *Dolphin*.

The lost Tayapa mines, celebrated in Spanish annals as having produced \$80,000,000 in silver and gold in the seventeenth century, and which are described on Spanish maps as being situated in Northwestern Mexico about fifty leagues from the sea, near Dos Pilares, have been found; if a Mexican newspaper is to be believed. As far back as 1859 Robert L. d'Aumalie, a celebrated French expert, declared the location of the Cieneguita, in the Sahuria district, Sonora, to be identical with the lost Tayapa. The Spaniards are said to have been murdered by their Indian slaves near the close of the seventeenth century, and for 100 years thereafter no one was allowed to enter that region. Explorers who have recently returned from Cieneguita report having discovered the old stone prisons and old smelters—stupendous work accomplished by the ancients. They say there are millions of tons of ore exposed, rich in copper, silver, gold and in the form of sulphide of copper that could not be worked by methods then in vogue. They declare there is ore in sight valued at more than \$100,000,000.

Mrs. Meynell, the gifted English essayist, had a warm welcome extended to her on her arrival in San Francisco in the first week of November. An elaborate luncheon was laid at the University Club, at which thirty-five ladies were present, with Mrs. J. S. Tobin in the chair. The guests

were seated at three round tables that were beautifully decorated. The first table was all in pink and white. Pink geraniums and carnations formed an elaborate centre piece, about which was a festooned circle of delicate white tulle, fastened at regular intervals with bunches of loosely tied pink roses. Pink candles with pink shades shed a soft light over this table. The second table was decorated all in cool greens. Baskets of ferns and potted plants with shining leaves made the board most attractive. Green candles with green shades furnished the illumination. The third table was aglow with gorgeous hued autumn leaves that trained their brilliant length upon the snowy damask. Bright madrone berries mingled with the magnificent foliage. On this table red candles with red shades were used.

Earl Russell, who was convicted by the House of Lords of bigamy for marrying a second wife in England after he had been granted a divorce in Nevada, is free to enter the United States if he so desires. Assistant Secretary Taylor of the Treasury, who has general jurisdiction over immigration matters, has so decided, overruling the Commissioner of Immigration. The latter, upon the representation of Horace J. Smith, of Philadelphia, who is understood to be a relative of the Earl's wife, said that Earl Russell had been convicted of bigamy and was not admissible under the laws excluding persons convicted of crime or misdemeanour "involving moral turpitude." Smith's complaint was transmitted to the Board of Special Inquiry at Ellis Island, New York, for its information in case he was detained upon his arrival there by the inspector. Assistant Secretary Taylor instructed the board to admit the Earl unless other reasons for exclusion than his conviction in England should appear. Mr. Taylor pointed out that Earl Russell had been granted a divorce by an American court, under which grant he was at liberty to marry again, and that in so marrying he was guilty of no crime against the laws of the United States or the State.

The British Admiralty is taking the most lively interest in the working of the personnel bill in the American Navy, with the view of the possible amalgamation of the line and engineer officers of the British Navy. Mr. Arnold-Foster, First Lord of the Admiralty, recently requested special reports on this matter, and Vice Admiral Fitzgerald writes to *The Times* on the same topic. The Admiral's letter is a spirited defence of the Navy against many recent criticisms, but he admits that the line officers must wake up and become expert mechanics as well as good seamen, in order to master the complicated machinery of the fighting ships, or else the engineers will out them from their present predominant position. "I am not prepared," he said, "to advocate the amalgamation of the engineers and executives in imitation of the Americans. We are certainly not ripe for it yet. Moreover, it is just as well to wait and see how it turns out with them. But if an amalgamation is to be eventually avoided, it can only be by our executives becoming practical mechanics. All real work is now done by steam, electricity and hydraulics. 'Touch the blooming button,' as Jack says, 'and let her go up.' I doubt not that he who is the most expert in touching the 'blooming button' at the right moment will be the victor in future naval battles just as the best sailors won of yore."

Standing at Triumphant bridge, Buffalo, at midnight, on Nov. 3, Mr. John G. Milburn pressed the electric button which extinguished the lights at the Pan-American Exposition. The hands played and thousands cheered as the lights faded to a red glow and then to darkness. Around Mr. Milburn were the men and women who, as managers, investors and employees, had worked for the success of the fair, only to result in a loss of over \$4,000,000. The total attendance was 8,179,674, which included passes. How far this fell below the expectations of the exposition promoters may be judged from the fact that the exposition paid a premium on a blanket accident policy on 16,000,000, and others that it would exceed 25,000,000 and 30,000,000. The first mortgage bonds, amounting to

\$2,500,000, will be paid in full. An issue of \$500,000 second mortgage bonds in unprovided for, but the revenue from salvage and buildings and from other sources will probably cover a part of this indebtedness. The remainder due to contractors is not definitely known, but it is said that it represents their profits for the work done, and no one will be severely embarrassed by the loss. Concession holders lost money, with two or three exceptions, and several were ruined. A notable money-maker was the cyclorama of the Johnstown flood, despised and scorned by investors, which closed the season \$100,000 to the good.

Maryland recently unveiled a magnificent monument erected to commemorate the burning of the tea-laden ship *Peggy Stewart* in the harbour of Annapolis 127 years ago. This incident followed the Boston tea party and is claimed by some as the real origin of the Revolution. The Boston cargo of tea was thrown into the harbor in the night by patriots disguised as Indians; but the *Peggy Stewart* and her tax-offending cargo were committed to the flames in broad daylight by patriots who made no effort to conceal their identity.

Over and above the four war ships for which Congress directed him last session to prepare plans as a basis for appropriation at the next session, Secretary Long has before him the recommendations of the Board of Naval Construction looking to authorization by Congress of the building of nearly forty more vessels from battle-ships down to tugboats. The plans for the two armoured cruisers and two battle-ships projected by Congress last session already have been prepared, and look to the construction of 16,000-ton battle-ships and 14,000-ton cruisers. The battleships and cruisers additional to those which the construction board proposes probably will be of the same size and general type. The Board's complete plan is:—

- Three sea-going battle-ships of about 16,000 tons displacement.
- Two armoured cruisers of about 14,500 tons displacement.
- Six gunboats of about 600 tons.
- Six gunboats of 200 tons.
- Six gunboats of 1,200 tons.
- Two colliers of about 15,000 tons.
- One repair-ship of about 7,500 tons.
- Six training-ships of about 2,000 tons.
- Four picket-boats of about 650 tons.
- Four tugboats.

The U.S. census report on school, military and voting ages for all states and territories shows the following summary for the country as a whole:—Persons of school age, 5 to 20 years, 26,110,788, of whom 24,897,130 are native born, 22,490,211 are white, and 13,806,160 are males; males of military age, 16,360,363, of whom 13,132,780 are native born and 14,495,396 are white; males of voting age, 21,329,819, of whom 16,227,285 are native born and 19,036,143 are white. Of the total number of males, 21 years of age and over, 2,326,255 are illiterate. Of the 16,227,285 native born males, 21 years of age and over, 1,706,293 are illiterate, and of the 5,102,534 foreign born, 620,002 are illiterate. Native white males of voting age who are of foreign parentage show a relative increase in their proportion since 1890, while the colored males of voting age have increased throughout the Northern and Western sections, with a few exceptions like California, where there has been a large decrease in the Chinese population. In many Southern States, especially Virginia, North Carolina, South Carolina and Louisiana, the coloured element of voting age shows a decreased proportion. Foreign white males of voting age show an increased proportion in all New England States, except Vermont. There has been a relative decrease in all of the remaining states and territories, except New Jersey. A little over 28 per cent of the entire alien population of the country is illiterate. This is notably so in Louisiana, where they constitute nearly one-half of the aliens.

HARVEST CANTATA.

On Sunday evening the usual service in Christ Church was followed by a short Harvest, or Thanksgiving, Cantata, the organ music of which was played with his usual skill by Mr. W. K. Vincent. All the numbers went very well indeed, the best perhaps being the opening chorus. The first solo was sung by Mr. S. H. Somerton; the soprano solos were taken by Miss Thomas; the contralto solos by Miss Leach and Mrs. Kirkland Wilson; the tenor solos by Mr. H. E. Hayward; a quartette was sung by Miss Thomas, Mrs. Wilson, Mr. H. E. Hayward, and Mr. Kirkland Wilson; and Miss Thomas, Miss Leach, and Mrs. Wilson rendered a trio for female voices.

NEWS OF THE WEEK.

Canon Gore has been appointed Bishop of Worcester.

The *Times* states that Sir William White, Director of Naval Construction, is resigning owing to ill-health.

The Reliance Wheelmen have a Club Run to Kodzu on Sunday, starting from No. 273 at 8 a.m. sharp.

Baron Kodama, Governor-General of Formosa, was to have left Kelung, Formosa, for Tokyo on Dec. 5th.

The official opening of the 16th session of the Imperial Diet will take place on Dec. 10th and not on the 9th.

Viscount Watanabe, former Minister of Finance, has telegraphed to Tokyo that he arrived at Vienna on Dec. 2nd from Rome.

There is a report that Baron Kawaguchi, Vice-Minister of the Imperial Household, sent in his resignation a few days ago.

We understand that the benefit tendered to Miss Atlantis on Monday night yielded yen 437. Expenses, however, were very heavy.

The Emperor and Empress have graciously presented the sum of yen 500 toward the sufferers from the recent fire at Kushiro, Hokkaido.

The Railway Authorities recently manufactured some 16 covered goods vans which were distributed on Dec. 3rd to the Tokaido and Hokuriku lines.

The British sovereign has been made legal tender in Ceylon since the 25th Oct. at the rate of Rs 15, thus bringing the Ceylon into line with India.

The Mayor-elect of San Francisco, Mr. Eugene F. Schmitz, is the leader of the orchestra in the Columbia theatre. The labour vote carried him into office.

It is announced that a team of Australian cricketers will probably visit England next summer, the majority of the first-class counties having welcomed the proposal.

No fewer than seventeen warrants have been issued for the capture of men belonging to the British battleship *Goliath* who have broken their leave. The ship leaves on Saturday.

It is announced in Berlin that from January 1st the Hamburg-America Steamship Company will extend its East Asiatic coasting service by the establishment of a line between Hongkong and Vladivostok.

A Chicago telegram of Nov. 1st announces that twenty American passenger engines, of the same type as those used to draw the Pennsylvania Limited, have been ordered for the North Eastern Railway of England.

It is reported from Nagasaki that an American officer who was on his way to Manila stated that the United States Government has resolved to take to America all the members of Aguinaldo's family as hostages, and that this step is due to the fact

that so long as the family remain in the Philippines the natives will continue to be disaffected.

It is reported from Nagasaki that the conduct of Japanese in Amoy has recently become so objectionable that the American Consul and other foreign residents have taken action with a view to their expulsion.

The graduation exercises at the Naval College, Edajima, will take place on Dec. 14th. The graduates then proceed to Yokosuka, whence they set out on a cruise on the training ships *Hiyei* and *Kongo* early in January for the southern Pacific.

On the afternoon of Nov. 27th while some 12 men belonging to the crew of the N.D.L. steamer *Stuttgart*, now in Yokohama, were rowing a boat inside the breakwater, their craft was capsized. All the occupants were saved.

It is announced that Andrew Carnegie will give £100,000 to build and equip a technical college in Southern Scotland. The institute probably will be located at Galashiels, on the borders of the counties of Roxburgh and Selkirk.

The Berlin correspondent of the *Daily Mail* gave currency on Nov. 8th to a report that Herr Albert Ballin, of the Hamburg-America line, was in London negotiating for the sale of eighteen steamers to Mr. J. Pierpont Morgan.

The *Daily News* of Nov. 7th said: "We learn that Miss Hobhouse and a lady companion have been arrested in South Africa and presumably deported." Miss Hobhouse was the first to agitate the condition of the British concentration camps.

Under the auspices of the Yokohama Ladies Charity Association (Japanese), a charity concert will be given on Dec. 13th and the 14th in the hall of the Sample Museum in Yokohama Park. If rainy, the performances will be held on the 16th and the 17th.

On Thursday afternoon a sailor from the Russian war-ship *Rossia*, now at Yokohama, who was very much intoxicated, assaulted a postman in the street near the Customs and entered the Customs' compound, where he acted in a most violent manner. The man was taken to the Kagacho Police Station where he was detained for a night.

It was stated that Count von Waldersee would probably go to London early this month. This visit was arranged soon after his return to Germany from China. It was believed that the Field-Marshal was going on the personal invitation of the King. Probably Count von Hatzfeldt's death has upset this arrangement.

The death is announced of Deputy-Controller Henry Robinson, C.B., who was in the China war of 1859-61, under Sir Hope Grant, was present at the taking of the Taku Forts and Peking, and was the first officer of the expedition to enter Peking to receive the indemnity paid by the Chinese. For this he was mentioned in dispatches, and received the medal and the military C.B.

The whaling business in Korean waters is at present carried out by the Nihon Enyo Hokei Kaisha (Japan Deep Sea Whaling Company), Messrs. Holme Ringer & Co., and the Russian Pacific Whaling Company on a large scale. In November, the business tax pertaining thereto was paid to the Korean Authorities by these companies at the rate of yen 1,532.95 from the Japanese company, yen 1,044.75 from the British establishment, and yen 3,565.95 from the Russian concern respectively.

The Railway Authorities have announced that during the cold season steam heaters will be attached to through trains on the Tokaido on and after Dec. 1st. Below is a list showing the trains that come under this category: Up-trains: From Kobe at 6 a.m. arriving at Shimbashi at 10.31 p.m. From Kobe at noon arriving at Shimbashi at 8.50 a.m. From Kobe at 6 p.m.

arriving at 10.48 a.m. Down-trains: From Shimbashi at 6.20 a.m. arriving at Kobe at 10.47 p.m. From Shimbashi at 12.20 p.m. arriving at 8.50 a.m. From Shimbashi at 6.05 p.m. arriving at 11.19 a.m.

It is reported by the police that about 4 p.m. on Nov. 30th a horse which was being ridden by Miss Andrews, an American lady, on the Bluff, suddenly bolted, throwing the rider and careering along till near No. 25 Bluff, where it collided with a jinrikisha. The vehicle was overturned and its occupant, also an American lady, was thrown out and considerably shaken and bruised. The jinrikisha-man escaped uninjured. The horse was captured at Jizo-zaka. It is understood that neither of the ladies is seriously injured.

The trade returns for Yokohama during last November showed an excess of exports over imports by yen 8,000,000. The value of exports amounted to yen 14,442,032, including yen 2,466,051 of *habutae*, yen 8,327,162 of raw silk, yen 696,809 of waste silk, yen 437,090 of copper, yen 149,725 of tea, etc., while imports were represented by yen 6,389,341, including yen 1,233,933 for a steamer, yen 514,255 for raw cotton, yen 442,677 for machinery, yen 337,352 for cotton thread, etc.

For the first time, some 500 cases of new Echigo kerosene, refined by the International Oil Company, were brought to Yokohama from Echigo a few days ago to the order of the Yokohama Kerosene Merchants' Guild. The new oil bears the brand "International." It is said that although the oil produces a somewhat red light it is not different from the Chester brand in point of quality. By the way, it may be added that since the operation of the new tariff on kerosene on October 1st there was no importation of oil until Dec. 2nd, when 150,000 cases of petroleum bearing the Anchor brand arrived in Yokohama.

Since the Camphor Monopoly system was inaugurated by the Formosan Authorities a few years ago, says a native journal, the business in both Formosa and Japan proper has been so unfavourably affected that quotations have been lowered considerably, this being chiefly due to the fact that there was an excessive output in Japan proper. The Tokyo paper now reports that as a consequence the yearly receipts of the Formosa Authorities have since shown a diminution of two million yen yearly and in view of this fact the Formosan Government recently asked the Central Government that a Camphor Monopoly should be organized in Japan proper as well. It is added that the Finance Department entertains an opinion unfavourable to the proposal.

At a special meeting of the Yokohama Aldermen's Council held on Dec. 2nd matters relating to the opening ceremony of the extension of the Yokohama Water-works were discussed. It was resolved that a loan of yen 150,000, bearing interest at the rate of two sen eight rin per day, should be obtained from a certain bank for the purpose of supplementing a deficit which was caused in connection with the work of expanding the Water-works, and that a sum of yen 15,183 should be voted in order to carry out the coming opening ceremony, which will take place on either the 21st or the 22nd at the Noge reservoir. They further agreed that a fountain and a monument in commemoration of the completion of the Water-works should be built in Yokohama Park. The above resolutions will be fully discussed at the next meeting of the Yokohama City Council.

About 7 a.m. on Dec. 1st, the street leading from Fujinicho, Kojimachi, to the old Hanzo Gate, Tokyo, was a scene of considerable excitement and disorder. As is usual every year, this was the day on which new conscripts enter their barracks and a party consisting of a conscript, his relatives and friends were proceeding along the street when a carriage, in which was Mr. Hirata, Minister of Agriculture and Commerce, came up. One of the grooms of the minister's carriage touched a flag which the party was carrying and instantly he was set upon by them and severely

handled. Mr. Ohara, the police inspector, who was attending the carriage, tried his best to stop the struggle, but was only treated in the same way as the groom. It is stated, however, that when the occupant in the carriage became known to the excited people the latter apologised to the Minister.

CORRESPONDENCE.

EMINENT ATHEISTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will some competent person please print in your columns a complete list of eminent persons living during the last century who were undoubtedly proved to be atheists.

Yours sincerely, 智神和
United States, America, Nov. 8th, 1901.

THE RECENT RIDING ACCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The reports in the local press with regard to the accident which befel Miss Andrews whilst out riding have been so carefully "thought out" that I would merely like to state that the runaway mare in question is my property and not Mr. W. F. Mitchell's, and that she was caught long before she got anywhere near Jizo-zaka.

The only correct statement given, itself the only one of any importance, is that happily both ladies escaped any injury.

I am, Dear Sir, yours faithfully,
Yokohama, 3rd December 1901. E. C. DAVIS.

THE HOUSE TAX AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We heartily approve your suggestion that arbitration is now probably a good way out of the difficulty of the House Tax. It would be a great relief to many to know just what we must do in this matter. As a tax-payer I have objected to this tax only on one ground, viz., that it is excessive. That a holder of a perpetual lease should pay a house tax and a land assessment of 28 *sen* a *tsubo* in addition, when a contiguous lot is assessed at only 8 *sen* a *tsubo* is certainly excessive. If when such conditions obtain, one cannot see that a distinction should be made he must be very dull indeed. The same objections to this inequality would be raised were it a fact that English or American citizens in their own countries were taxed higher than in Japan. But this is not the case. Taxes in Japan are higher than they are even in England. *Ceteris paribus*, no holder of a perpetual lease would raise any objection to the house tax. The way out of the difficulty seems to me to lie through giving foreigners the right to buy and hold land in Japan as Japanese citizens do.

Very truly,
Dec. 2, 1890. E. SNODGRASS.

[It would be more than difficult to prove that taxes in Japan are higher than they are in England, of course that does not affect the justice or injustice of the house tax.—*Ed. J.M.*]

MORMONISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a constant reader of your journal, I want, most heartily, to commend your stand on the question of the coming of Mormon propagandists into Japan and to unite with you in the hope, expressed in your editorial note in yesterday's paper, that the statement that official permission has at last been granted for the propagation of the creed in Japan, is an error. If the permission has been granted, I venture the prediction that some day, the Japanese Government will revoke it.

The American Government has had to deal, more than once, in a restrictive way with Mormonism, and the signs are not wanting that again, ere long, the power of the Government will be brought to bear, and that very heavily, upon this "life-destroying octopus" in her midst.

Americans are a long suffering, patient people,—a nation that carries its principles of liberty, sometimes, to an absurd extent; as witness the liberty of speech granted anarchists and the terrible fruitage that it has borne in the assassination of President McKinley. But the nation is now fully aroused on the subject and the days of the anarchist propaganda in the United States are ended.

Some day, in the not distant future, the patience of the American people will have reached its limit and then Mormonism will either be exterminated root and branch from American soil, or it will be so stripped of its seductive features that it will no longer be able to deceive the ignorant.

Already the American people, in various sections,

particularly in portions of the South, as for instance, north Georgia, or in the mountains of east Tennessee, are beginning to protest, in their vigorous way against "the Mormon invasion," as it has been called. There are many places where Mormon elders,—I purposely spell elders with a little e,—do not now dare to place their feet. During a recent sojourn in the States, the telegraphic columns of the various dailies frequently told of incidents where outraged citizens in these and other sections gave notice to "the greedy horde of cormorants, calling themselves bishops, elders and priests," to use the language of the late Joseph Cook, that they must either move on, or they would be tarred and feathered. In one or two instances, I believe, this heroic treatment was administered and it need hardly be stated that, after this, when they received notice to quit they did not stay on the order of their going.

The pledge of Mormon bishops, elders, and priests not to preach the doctrine of plural marriages is not worth a fig. That the Mormons still hold the doctrine is not denied, and any one who is familiar with the history of the movement cannot doubt for an instant that their representatives now in this land have any other purpose than to inculcate this ruinous doctrine in Japan, should they be permitted to teach and to preach.

The practice of polygamy is prohibited in America and none know the fact better than the Mormons themselves, and yet thousands of so-called "elders," are now going into every part of the country and are seeking by stealthy, Jesuitical means to propagate a teaching, the practice of which is a violation of the law of the land. Their coming to Japan is but a part of a world-wide scheme of "invasion" cunningly planned by the Mormon hierarchy in Salt Lake City.

Americans are a liberty loving people and they define the term very broadly, and frequently, from a mistaken idea of liberty, they very patiently endure things which other nations would end in a hurry; but America's patience with the Mormons is about exhausted. The mutterings of the coming storm are being heard in various sections of the land, and it will soon burst on their heads and the iniquitous system will meet its already too-long-deferred doom.

That the Mormon question in the United States is still a very live one can be seen from the enclosed clippings, both taken from the November issue of the leading magazine of its kind in the country. I trust you will find room for both of them.

JOSEPH COOK ON MORMONISM.

The late Joseph Cook, of Boston, was in many respects a remarkable man, and seems to have been raised up especially to combat the scepticism of the last thirty years. His so-called "preludes" to his Monday lectures, brief as they were, often proved like thunder-peals in behalf of the right in matters of State and Church, the family and nation.

A correspondent describes a scene that he witnessed, which he regards as Joseph Cook's greatest effort. It was in the United States Court-house in Salt Lake City, the United States marshal with armed deputies being present, and the audience being mainly Mormons, some of them well known as violators of national laws.

"As Mr. Cook went on with rising excitement, pouring forth satire, invective, argument, giving accounts of Mormon crimes with names of their perpetrators, there were muttered oaths and contradictions, which were repressed by the marshal. At last Mr. Cook came to the climax, introducing the well-known carving over Brigham Young's Beehive house, and these were his final words, which fell on the ears of men whose faces were ghastly and livid:

"I have long been seeking some emblem into which, for the sake of clear understanding and easy recollection, I might crystalize my conviction in regard to the central principle of this Mormon blasphemy. I had to come right here among you to find such a speaking symbol. And in the carving over the gate which leads to one of your prominent official houses I find that your own prophets and leaders have unwittingly proclaimed their central principles. It is the figure of an eagle pressing his talons into a beehive; rapacity preying on industry! That is Mormonism! If only the eagle were a vulture the emblem would be without a flaw! A more industrious and patiently plodding people can not be found on the globe. Their toil has made deserts green with meadows, golden with harvests, and bright with flowers. Yet a more greedy horde of cormorants calling themselves bishops, elders and priests the world does not contain."

THE MORMON MONSTER. By Edgar E. Folk, D.D. Illustrated. 8vo, 372 pp. \$2.00. Fleming H. Revell Co., New York and Chicago. 1901.

This description of Mormonism is almost too plain spoken for publication. If it were less important it would be inexcusable. But unfortunately it is not untrue; the picture presented is too well authenticated to be discredited, and stands as an unanswerable refutation of the claims that Mormonism is only political, that it is a form of Christianity, that it is harmless,

and that the belief in and practice of polygamy have been given up.

The author first gives a history of Mormonism, and shows conclusively how it was born in fraud and ignorance, and nurtured in vice and superstition. He then considers it as a religious, and a social, and a political system, and shows it to be a menace and a curse to the individual, the home, and the nation. That it is in many respects a powerful institution none will deny, and therein lies much of the danger from it. The perfection of its political organization surpasses that of Roman Catholicism, and the appeals to the lusts of the flesh surpass even those of Islam. These two elements constitute its strength and its weakness; they give the secret of its attractiveness to the natural man and foretell the certainty of its overthrow. Let not American Christians slumber while this life-destroying octopus is in our midst.

The Rev. E. E. Folk, D.D., is a gentleman of high standing in his community, a section that has been greatly afflicted with the presence of the emissaries of Salt Lake City.

He is also a personal friend of the writer of this communication. "The Mormon Monster" is a result of a visit to Salt Lake City and a study of the question on the spot.

Very truly,

AN AMERICAN FRIEND OF JAPAN.

THANKSGIVING SERMON.

The following is the gist of the sermon delivered by the Rev. H. St. G. Tucker in Trinity Cathedral, Tokyo, on Thanksgiving Day:

"And he hath said unto me, My grace is sufficient for thee," 2 Cor. XII. 9.

We are gathered together to-day in accordance with the proclamation of the President of our country, to return thanks to Almighty God for the mercies of this Providence throughout the year. On such a day we naturally consider the reasons for this national expression of thankfulness.

As we look back over the year that has passed we find many reasons for gratitude. We see a year of unparalleled material prosperity. Surely in this respect God has been gracious unto our nation, and even where in individual cases, financial or material success seems to have been withheld, we can thank Him for the revelation of the promise that, "all things work together for good to them that love the good." Again we thank God to-day for the long continued blessing of civil and religious liberty. We bless him for the wonderful triumphs of the human intellect, which in every sphere have done so much to increase the happiness and alleviate the sufferings of our race; we thank him that day by day he is fulfilling his promise to us that "we shall know the truth and the truth shall make us free." As a nation we thank him that even into the dark valley of the shadow of death, He has made to shine the light of his gracious Providence. But if we wish to appreciate the fullest and deepest meaning of Thanksgiving day, we must not only look upon these blessings of God as in themselves causes of gratitude, but we must also consider them as means towards the fulfillment of the great purposes of life. For life is not a mere unconnected, aimless succession of events, each one which is itself a sorrow or joy. It is rather a succession of opportunities, each one of which may be made a step towards the performing of that work which God has given us to do. The true meaning of these blessings of God is that they are Heaven sent opportunities for doing our life duty, for attaining to the ideal which God has set before us. Our greatest reason for gratitude to-day is God's promise that the blessings and the help which He bestows will be sufficient to enable us to perform the work with which He has entrusted us. To those who use His mercies aright, who seek His blessings not for selfish enjoyment, but as helps and opportunities for service, God says "My grace is sufficient for thee."

The incomparable preciousness of this promise will be understood, if we consider how without God's grace, our own strength is utterly insufficient to cope with the duties of life. Everyone of us knows from his own experience the meaning of the call to do that which we seem unable to accomplish, we who are Christians see on every hand work that we ought to do, but which is too hard for us. Over and over again the path of duty leads over obstacles that our feeble strength cannot surmount. There is set ever before us a high ideal to which we would lift our imperfect lives. We see our faults, we see what we ought to be, we long to attain to holiness, to the perfect man, but a disheartening sense of weakness defeats all our efforts. We lack the power to rise. Nor is this experience limited to the Christian. In every man made in the image of God there is a vague longing to rise above present conditions. There is no one who has within him the soul of a man who does not feel instinctively that he ought to be something higher and

better than he is. But the vision of what we might be and ought to be is always marred by a feeling of the utter hopelessness of reaching the high ideal. This is the great pathos of life apart from Christ. The knowledge of his own weakness is forever turning man away from what is highest in his hopes and longings. He is ever mocked by the consciousness that between him and his ideal there is a great gulf fixed, a gulf which no human power can ever hope to cross.

How then are we to act in the face of this great life dilemma. There are three answers.

The easiest way to meet the difficulty is to lower the ideals to the level of our power of accomplishment. We see illustrations of this on every side. The boy has bright dreams for the future. The young man enters the battle of life with lofty ideal and high resolves. But as he grows older life's hard labours and cruel disappointments cast the dark shadow of despair over his fair visions. Gradually he gives up each cherished hope, and too often old age finds him unable to say of any of his youthful dreams, "it is finished." We see in society a vast body of men who with scarcely a struggle give up all hope of raising themselves above the dead level in which they were born. History, if it were fully written, would proclaim the same fact. We look back over the ages and see the triumphs and wonder at the progress of our race; but if we could read the story that is locked up within human hearts, would it not be a pathetic record of still born ideals, of vanished hopes, and stifled aspirations.

Let us look at our own spiritual lives and ask, has there been no lowering of ideals? Are there not even now duties on which we are turning our backs? Has not the purpose which is shaping all our actions fallen far below that placed before us by the Master, who said, "Be ye perfect, even as your Father in Heaven is perfect." Our lives tell us only too plainly that we have taken weakness as our counsellor and have faltered before the sublime heights to which Jesus Christ bade us aspire. The meannesses, the false standards, the worldliness of Christian society proclaim the same fact. The war, the dishonesty, the rapacious greed, which disgrace Christian nations prove it. To Christ's command "Be ye perfect," the world, even the Christian world, answers, "I cannot. There is a thorn in the flesh which renders the task too much for me." It demands a more practicable ideal. It substitutes a lower standard, one more commensurate with human strength. This is the easiest answer to the great problem of life, but like all easiest things it is the worst. It is an answer which would leave no room in life for Thanksgiving Days. It means spiritual suicide, it means disloyalty to Christ, it means death. It is the coward's answer. It is in utter contrast to the answer of that brave soldier of the cross, who from his prison chains cried out in triumph, "I can do all things in Him which strengtheneth me."

There is a second answer to life's dilemma. Many men refuse to recognize the discrepancy between human strength and human hopes. There are two classes of such men. One class neglect the question of means altogether. They have beautiful dreams for the future, but they do not concern themselves over the question how shall these be realized. In the world such men are ridiculed and rightly; whatsoever a man soweth that shall he also reap is the basic law of life. He who expects to reap the harvest of high ideals from the seed of carelessness, is doomed to certain disappointment.

The folly of such men is self-evident, but there are those who hope that in human effort a way may yet be found to achieve human ideals. There are, for example, many who think to find in the refining influences of culture and civilization a power to elevate and regenerate the race. But the world's history is full of the sad failure of all such ideas; wonderful as are the material and intellectual triumphs of civilization and culture, they leave the soul just as they found it. Good taste is not synonymous with good morals. Education can beautify the outer life, but it can not purify the inner spirit. Culture cannot satisfy our longings after pure and holy character. Civilization cannot bring the soul any nearer to its God; after these have all done their work, the voice still cries, "He that is unjust let him be unjust still; but he that is filthy let him be filthy still."

The third answer to life's dilemma comes from God. As to St. Paul, so to each one of us, He says, "My grace is sufficient for thee." This answer is as full of promise as the others are of despair. Instead of lowering our ideals to the level of our weakness, it transforms our weakness into power. It tells us that the bright vision that ever and anon breaks over the soul is no mirage to mock and taunt the weary traveller of earth, but it is a real glimpse of the land of promise. It says that these longings for holiness and God that rise within the soul are no idle imaginings of the fancy, but they are calls from God to go forward and possess the land. It tells us that all that Jesus Christ taught us we ought to be, through God's grace we may become. It does not hold out false and unsatisfying promises as to what human

strength can achieve. It tells us plainly that of ourselves we can do nothing. And yet it bids us not to faint under life's burdens, but to work out our own salvation with fear and trembling, for it is God that worketh in us both to will and to do of his good pleasure.

We, who like St. Paul, are called by God to go forth and do battle for him in the enemies' country, need to hold firmly to this promise. It is in such work as ours that the discrepancy between our strength and our duty seems most appalling. We are truly a mere Gideon's band sent forth to face the mighty powers of unbelief and sin. But let us not be disheartened because of weakness, let us rather rejoice in it. God's power is made perfect in weakness. The history of the Christian Church bears out the apostle's saying, "I rejoice in weaknesses, for when I am weak, then am I strong." The times of the Church's greatest apparent weakness, have been the times of her greatest victories. The times when to human eyes she seemed the strongest have been the times of her greatest falls. Right earnestly do we need to pray "In all times of our prosperity, good Lord deliver us." Let us not shrink from doing our full duty because of our own feebleness. God's grace is still sufficient for us. He still chooses the weak things of the world that he may put to shame the strong. He still uses earthen vessels to carry to lost souls the treasures of his love.

AMERICAN SHIPPING.

The report of United States Commissioner of Navigation, Mr. Chamberlain, just issued, says that the past fiscal year has been the third successful year of growth in American shipping, exceeding the two previous years. The extent and nature of work under way or projected in shipyards promises an even greater growth for the current fiscal year.

American tonnage has now attained practically the former maximum of 1861. The figures of 1901, compared with 1861, show an increase in coasting trade vessels from 2,704,554 tons to 4,582,683 tons (two-thirds of this increase being on the great lakes); a decrease in foreign trade vessels from 2,496,948 tons to 879,595 tons, and a decrease in whaling and fishing vessels from 338,375 tons to 61,940 tons.

Of total tonnage 3,623,210 tons are wooden vessels and only 1,901,017 tons are iron or steel. In 1900 Great Britain launched 1,440,000 tons of steel vessels. Porto Rico appears in the returns with twenty-five vessels of 5,297 tons and Hawaii with sixty-four vessels of 37,149 tons. In the Philippines 2,340 vessels of 102,581 tons (of which 149 vessels are steam) are under American protection. Until Congress has so enacted, the report says, Philippine vessels are not vessels of the United States.

SMALL AMERICAN CARGOES.

Although registered American vessels increased 62,635 tons during the year, American vessels carried only 8.2 per cent of U. S. exports and imports, the smallest percentage in their history. The fleet of ocean steamers in foreign trade, the report says, is too small to be compared with that of foreign nations. The fleets of each of the four large British and German steamship corporations exceeds the American fleets in tonnage, mileage and business. The tonnage built and documented in the United States during the past fiscal year comprised 1580 vessels of 483,469 gross tons.

The steel vessels under construction or under contract during the current fiscal year will much exceed similar tonnage built in any previous year. The bureau is advised of eighty-nine such merchant vessels of 355,465 gross tons, to be valued at about \$36,000,000. Besides these seventy-one naval vessels of 281,148 tons' displacement are building. In this work forty-four plants, with a capital of about \$68,000,000, employing about 46,000 men, are engaged.

The American cost of building a steamer of the *Minnehaha* type is \$1,846,800, and the British cost is \$1,419,200. The American cost of the smaller trans-Atlantic cargo steamers will be \$729,000, and the British price ranges from \$534,000 to \$486,000.

WAGES ON THE VESSELS.

The difference of wages on American and foreign vessels is considered in detail. The pay roll (excluding master), the report says, of 380 men on the steamship *St. Louis* is \$11,300; of 427 men on the British steamship *Oceanic* is \$9,900, and of 900 men on the German steamship *Kaiser Wilhelm der Grosse* \$7,715. The report contains a detailed statement of the foreign voyages of American vessels last year, showing that the American flag was seen much oftener in the North Atlantic during President Jefferson's embargo (1808) or during the cruises of the *Alabama* than at present. Foreign shipping in the Pacific trade had doubled in three years. The purchase of the Leyland line is spoken of in the report as evidence that American capital is willing to invest in ocean steamships; that there is an advantage to American exporters in American

control of ocean steamships, even if not under the American flag, and that in the coming development of ocean transportation facilities the union of trunk railroad lines and steamship corporations will be an important factor.

Including the Leyland purchase American capital owns fully 670,000 tons of steamers under foreign flags, which in actual carrying power exceed all American vessels now engaged in foreign trade. The War and Navy Departments also own 126,847 gross tons of foreign built transports and colliers.

The principal foreign and American ocean mail contracts are printed in full, and it is shown that at the present prices of steamships British ocean mail contracts are more advantageous for steamer lines than American contracts under the act of 1891.

FOOLISH VIRGINS.

It takes a brave man to censure the belauded American girl, and Mr. Gregory, in the *Century*, approaches her with an air of trepidation. Setting aside, as above criticism, "those modest workers who at home or elsewhere are struggling with life's problems and, like happy nations, have no history," he divides American girls of to-day into two groups: "In the first category are those who takes themselves and their occupations seriously, being convinced that they were sent into the world to correct parental faults and revolutionize things generally. The second—perhaps the larger class—on the contrary, emancipate themselves from home duties (as far as circumstances will permit), looking upon household cares as beneath their notice, and resenting, as an injustice, any attempt on the part of parents to restrain their liberty."

Mr. Gregory points out in excuse of the existence of each class that the fault lies more with our foolish social conditions and the detached attitude of parents than with the girls themselves, who are encouraged to shirk both cares and responsibilities and pass days and evenings in idleness. He compares their lot with that of their European cousins: "An English or a French girl of position is born into a circle of duties and labor from which there is no escape. She learns early that many people are dependent on her or look up to her as their model. The poor in the neighborhood fall to her lot; it is she who aids her mother in the finances of the house, or when food and linen are being sent to cottages where there are new arrivals. Invalid old women have to be visited; the rector calls on her to furnish music for his village club or help entertain his working-girls of a Saturday night. The fact that life is not and can not possibly be all holiday is early impressed upon foreign women. The work that lies ready to their hands is a matter of tradition, and can no more be shirked by such maidens than a presentation at court or a first communion. They are integral parts of life. Few girls on our side of the Atlantic have experiences of this kind. To the majority country life means a hotel or a cottage hired for the summer months, which carries no responsibilities with it. A more powerful factor, however, is the curious habit parents have of so arranging household machinery that their daughters shall be freed from its wheels."

According to Mr. Gregory, "the average New York miss to-day is little better than a 'parlor boarder' in her home, than which it is difficult to imagine a position more detached. From the time she wakes in the morning until retiring for the night she takes no part in household matters. To get through the morning, she joins some art school, or attends a reading club, where she lunches if possible, or else wanders home for that meal late, and disturbs the routine of the kitchen. After a hasty bite, my lady accomplishes a 'quick change,' and is out of the house again for the rest of the afternoon. Calls, receptions, or aimless trapesing—it doesn't matter what—fill her hours, the great point being not to get home until dinner-time. If there is nothing 'on' for the evening, she passes it over a novel, as undisturbed by any convulsions that may be in progress below-stairs as the most self-respecting 'star boarder.' A sub-species of the genus parlor boarder existing among us, and among us alone, no other nation disputing our claim to this possession, is—oh, hideous phrase!—the matinee girl, a type one shade less attractive than the tramp. When of a Saturday afternoon the throngs of idle minxes come trooping, opera-glass in hand, from the elevated stations, I feel as the elector of Brandenburg must have done when, on his walks about Berlin, he would shake his cane at the young women he met, calling out, 'Go home, you idle wench; the street is no place for you!' Without going as far as disgruntled old Frederick, I can not help feeling a certain irritation as the crowd pushes into the theatres, for, somehow, each half-grown girl calls up the picture of a neglected Harlem flat or stuffy office where a weary parent is grinding out the price of those theatre tickets."

After drawing a picture of the athletic girl of to-day and giving an amusing account of the life of a

female golf champion, Mr. Gregory closes with the hope that the American girl may yet take her rightful place, easily first among women. "Not a disheveled sportsman, weather-beaten and ill-kept, not an adventurous navigator, square of jaw and unchangeable of face; not a household tyrant, versed before her time in the sinister lore of the world; not a tramp saint, or an idle goddess, but a gentle, home-loving maid."

SIR FRANK SWETTENHAM.

The King of October 19th has the following reference to H. E. Sir Frank Swettenham:—

Sir Frank Athelstane Swettenham, whose appointment as Governor of the Straits Settlements has just been announced, has reached that high office in the course of a regular progression from posts quite at the foot of the tree. It was in 1870 that he first entered the civil service of the Straits, and ever since then Malaya has been almost exclusively the sphere of his activities. Intimately acquainted with the life and language of these rude states, after ten years of study he published a Malay-English Dictionary, wrote "About Perak" in 1893, and sketched Malaya in prose in 1895. He is, moreover, joint-author of a Malay-English Dictionary. These literary achievements, however, are quite by the way, for he has been constantly busy in official capacities. From the post of Assistant British Resident at Selangor he passed to the Assistant Colonial Secretaryship for Native Affairs in 1876, and retained it for five years. Then he went back to Selangor as Resident till 1880, when he was appointed to a similar position for Perak, and finally, as Resident-General, controlled the Federated Malay States from 1896. When the Birch tragedy occurred in 1875 in Perak, Sir Frank Swettenham accompanied the expedition as Deputy Commissioner, was mentioned in despatches, and received the medal and clasp. He has made a close study of the Chinese language and secret societies to such an degree that he is able to pose as a native, and remain undetected. This is no doubt the reason why, during the period of unrest in China last year, he was despatched on a secret mission—an errand in which he would delight. He saw the "Boxer" movement from the "inside," agitated his friends by remaining away for several weeks, and returned safely with a most useful report. Now that Sir Frank is absolute Governor, he may hear from his old acquaintance, the ex Sultan Abdullah, whose implication in the Birch murder procured him banishment to the Seychelles. Abdullah has never ceased to plead for permission to return to Perak. Altogether Sir Frank is a very versatile man—and even in his recreations seeks variety, for he hunts and shoots, sketches, plays whist, and is a member of the M. C. C.

FRANCE AND TURKEY.

On the night of Nov. 9th M. Bapst, Councillor of the French Embassy at Constantinople, received a satisfactory communication from the Porte regarding the remainder of the French demands.

Admiral Caillaud telegraphed on Nov. 9th to Paris particulars of the seizure of the customs at the principal port of the island of Mitylene. He said that, in consequence of the sympathetic welcome extended to his squadron, he landed only a single company of marines, who were received with marked confidence by all the inhabitants.

Telegraphic communication between Constantinople and Mitylene was on that restored. The latest despatch from M. Bapst, Councillor of the French legation at Constantinople, notifies the French Government that the Porte had handed him the drafts on the customs covering the entire Lorando claim, and payable monthly from February, 1st, 1901, to May 1st, 1903. The Foreign Minister, M. Delcasse, received the announcement that the Sultan had signed the irade executing his engagements.

The Foreign Office at Paris announced, however, on Nov. 10th that the Sultan of Turkey has issued an irade for the execution of his engagements with the French Government, and that the Franco-Turkish dispute was at an end. Tewfik Pasha, Ottoman Minister of Foreign Affairs, wrote a letter to M. Bapst, councillor of the French Embassy in Constantinople, notifying him of the signing of the irade, which, while settling the original French demands, accepts the French demands as set forth in a despatch to the *Temps* from Constantinople together with an additional clause, by which the Sultan pledges himself to consider as authorized in full right the foundations, extensions, constructions and repairs of the schools and religious and hospital establishments which France may desire to carry out if the Porte is advised of her intentions and makes no objections within five months.

France has thus far received full satisfaction, and M. Delcasse, on the receipt of M. Bapst's dispatch telegraphed him to inform Tewfik Pasha that diplomatic relations had been resumed and that M. Bapst should consider himself as regularly charged with the affairs of the Embassy. Instructions were also sent to Admiral Caillaud at Mitylene to re-embark the marines and to return to Greek waters, which is understood to mean the vicinage of the Island of Syra. Admiral Caillaud will remain in the Levant some time longer. M. Constans, the Ambassador, will return to Constantinople very shortly.

The additional clause was conceded at the request of France in order to prevent future difficulties, such as the Turkish provincial authorities have often raised either on their own initiative or in consequence of instigation by the Porte.

The *Temps*, which describes the result as a "brilliant victory for French diplomacy," says:—"The great merit of the Government was in being able to restrict its action. Very serious difficulties might have arisen had France departed from her reserve. The favourable disposition shown to our representatives abroad has been due to the fact that the civilized world has had opportunity, during the last seven years, to observe the progress of the anti-European movement in the Sultan's dominions. Austrians, Italians and Britons, have all been victimized by the Sultan and his councillors. After the Armenian massacres and the successful war with Greece, they thought everything was permitted to them."

"We hope the Sultan will now understand his duties toward the civilized Powers and toward his own subjects, unto whom he has taken solemn engagements which he has always disregarded. Otherwise Europe, which, thanks to the energetic action of France, is now able to reassume at Constantinople the authority she lost seven years ago, will applaud the initiative which the signatory Powers of the Berlin treaty are reported to be about to take to extort from the Sultan the execution of clauses too long fallen into disuse."

The morning papers, in their comments upon the termination of the Franco-Turkish incident, followed party lines strictly. The supporters of the Government hailed the outcome as a great diplomatic moral and material success. The other journals either affected scepticism with reference to the final outcome and assumed that it was really a check disguised under the more or less illusory concession promised by the Sultan. Some papers even hinted that France had actually backed down owing to the coolness with which the Powers have received her explanations regarding the objects and scope of the naval demonstration.

"We hope the demonstration will be sufficient to restore forever the prestige of France in the East," said the *Figaro*. "Doubtless the very near future will show if so great a result has been obtained so cheaply."

The *Gazette*, while admitting that a success had been achieved, remarked: "The instability of the Government and the contradictions of its diplomacy are such that even the Sultan thought there was no risk in treating the French like mere Armenians. The Mitylene expedition is said to have disabused him, but must we always mobilize a fleet in order to force a foreign nation to respect us?"

The *Soleil* remarked:—"We have another promise added to so many. We are somewhat in a hurry in announcing the end of the Franco-Turkish conflict."

The *Petit Journal*, which voices the views of the Government, said:—"It is for France a considerable diplomatic success. The rapidity and precision of the movement of the squadron was a military success which Europe has noticed. Our dignity in the Levant and our moral authority issue from the conflict increased in the present and assured for the future."

PASSING OF THE AMERICAN LARGE FAMILY.

The editor of *Harper's Magazine* discusses from his "easy chair" certain points recently emphasized by Dr. Stanley Hall, president of Clarke University: The failure of women's education to provide strength for wifehood and motherhood; the physical break-down of most American women after the birth of one child; the small families that are now the rule among Americans. (The writer does not deny, the exclusive virtue of large families, which, he says, "were so well in their way and their day." He finds much still to say in their praise, as that "the children in them helped to bring up one another. They enlarged the boundaries of the home, which, however, did not perish with them in this intensely domesticated nation, and they were the fulfillment of a scriptural injunction." On the other hand, this writer finds many things in favor of the small family. "If," he says, "as John Fiske so luminously taught, the prolongation of infancy in the tender vigilance of its guardians is the

nursery of civilization, then the small family is better for the race; for every child in it can receive that devoted care which every child has a sacred right to from those who called it out of the cosmic unconsciousness into this being, pleasing or anxious, or both, as the witness chooses."

In any case, the writer concludes that the large family in America is doomed, and we might as well make the best of it. "The small family has apparently come to stay, and so far as it is involuntary it may be a farther fulfillment of the divine purpose, a refinement upon the simple, crude obedience of the large family, which often made an inadequate drudge of the mother, even when an eager one, and a hopeless slave of the father, even when a happy one. In spite of all the cant and all the conscience about it, there are no signs of its coming back. The substitution of the old-fashioned hearth and brass andirons for the gloomy stoves of the early small-family period failed to recall the large family. A few enthusiasts in the cause have succeeded in restoring here and there a fleeting resemblance of the large family of the colonial times, or the first years of the republic, just as they popularized the reproduction of claw-footed furniture; but one feels a touch of amateurishness in their work; it is a pose, a fad; and it is safe to say that unless the state can abolish want, or the fear of want, or society can make itself less agreeable to young married people, the American large family must remain a thing of the past."

THE BOER ATTACK ON BENSON.

A correspondent of the New York *Non* visited the camp of Benson's column at Brugspruit on Nov. 7th and there learned the details of the fight at Brakenlaagte. The story gives ample proof of heroism on the part of the British mounted troops and artillery and the most resolute bravery on the part of the Boers.

The fight began with sniping at the British rear guard, which was defended by the Third Mounted Infantry. About 3 o'clock Colonel Benson, finding the Boers were being re-enforced in great numbers, sent back a squadron of Scottish Horse to assist his rear guard. At the same time he halted two guns with an escort of one company of Buffs, which took up a position on a low ridge. Major Woods-Sampson was sent forward to strike camp, and when this had been done he ordered the Yorkshire Mounted Infantry and Scottish Horse to retire on the guns.

The Boers, seeing this movement, dashed forward in a charge of extraordinary vigor. Seven hundred of them rode full tilt on the British lines, yelling defiance as they fired from their horses. The British troops galloped to meet them and gained a ridge 2,000 yards out from their camp, on which Colonel Benson stood with the mounted men in extended formation. In his van the Scottish Horse held the right, facing the Boers, and the Yorkshire Mounted Infantry the left. Benson himself, with his staff and artillerymen, was by the guns.

The Boers dashed recklessly on through the escort company of Buffs and gained a hollow within forty yards of the guns. There they dismounted and took cover behind the shoulder of the ridge, although some continued to fire from horseback. Others crept up and poured a deadly fire on the defenders. Colonel Benson fell, shot through the knee, but at once sent a message to Major Woods-Sampson, with the main camp, telling him where to direct the British gun fire. Major Young, with the rearmost gun in the British camp, placed his shells beautifully just over the ridge. After the defenders of the two foremost guns had all been shot down this shell fire from the British camp prevented the Boers from advancing to take away the guns until after dark.

The brunt of the defence of the ridge was borne chiefly by the artillerymen serving the two front guns and by the Scottish Horse and Yorkshire Mounted Infantry, besides Colonel Benson and his personal staff. Out of 160 men on the ridge the British had 123 casualties. The Scottish Horse alone had seventy-three hit out of eighty and the artillerymen twenty-eight out of thirty. Two companies of the Yorkshire Mounted Infantry also had a terrible proportion of men killed and wounded. Of five officers all were killed but one. Colonel Benson, Lieutenant-Colonel Guinness and Captains Murray, Lindsay and Thorold, with many of their men, all fell dead here. Lieutenant-Colonel Guinness fired his last shot from beside the guns and immediately fell dead, riddled with bullets.

A trooper in the Scottish Horse named Grierson, who was not wounded, remained to the last beside Colonel Benson, hoping to get a message from the commander to take him back to camp. When Colonel Benson was hit mortally and the trooper himself wounded, British resistance weakened, there being few left alive to withstand the Boers.

Just before he died Colonel Benson sent for Major Woods-Sampson and said:—"Defend your camp for all it is worth. Louis Botha has stated that he will

attack in the morning with 1,400 men, unless you surrender."

The men in the British camp entrenched their lines during the night and in the morning the position was impregnable.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

PROSPECTS IN SOUTH AFRICA.

Shanghai, Nov. 29.

The Times Pretoria correspondent says there are still seventy recognised Boer commandos in the field, of which twenty-six are in the Transvaal, thirty-one are in the Orange Colony, and thirteen are in Cape Colony. The task of capturing these must necessarily be slow, Lord Kitchener's striking arm consisting at present of only 45,000 men.

BORNEO.

Mr. Cowie, speaking at the Borneo dinner, said he was more hopeful of success than ever. Mr. Martin said Borneo had set an example in the abolition of slavery and he saw no prospect of native difficulties.

PLAGUE IN HONOLULU.

Ten plague cases are reported in Honolulu. MISS STONE.

Later.

A report has reached the Turkish authorities that Miss Stone has succumbed to hardship and that the brigands have dispersed.

FRANCE AND THE CHINA INDEMNITY.

The French Chamber of Deputies has passed the China Indemnity Loan.

MORE MILITIA BATTALIONS.

Four more militia battalions have been embodied.

MARQUIS ITO IN RUSSIA.

Shanghai, Nov. 30.

Marquis Ito has had a special audience with the Czar, Count Lamsdorff, the Russian Minister for Foreign Affairs, being present.

TERMS OF PEACE.

The Hon. Mr. C. T. Ritchie, President of the Local Government Board, speaking at Croydon, declared that Lord Salisbury's pronouncement that no shred of independence would be left to the Boers had been misunderstood. The British Government, declared Mr. Ritchie, were unable to again offer the Boers the terms they had rejected, but if the Boers generally accepted a promise of representative government at some future time, this would form a basis for the conclusion of peace.

FRANCE AND SIAM.

Shanghai, Dec. 1.

It is announced in Paris that the French Minister in Bangkok has had a prolonged interview with the King of Siam, and that questions relating to France and Siam have been discussed in a friendly spirit. French Consulates will be established at Angkor and Battambang.

MARQUIS ITO IN RUSSIA.

Shanghai, December 2.

The Czar has conferred on Marquis Ito the Alexander Nevsky Order. Marquis Ito has had a flattering reception in St. Petersburg.

MANCHURIA.

The Manchurian negotiations with China have been broken off in consequence of Japan's objections.

SOUTH AFRICA.

Nobody will be allowed to land in the Cape Colony or Natal without a permit after the 1st of January.

RUMOURED ROYAL SCANDAL.

There are persistent reports of a serious division between Queen Wilhelmina and her husband. The latter has now gone to Germany.

THE GERMAN TARIFF.

Later.

A Socialist petition against the proposed new German tariff has received 3,000,000 signatures. Violent debates are anticipated in the German Reichstag upon the subject, but the tariff will probably become law.

MARQUIS ITO.

Marquis Ito will remain some time in St. Petersburg. The Russian authorities are gratified at the result of his visit, which the Russian press interprets as a sign of the goodwill prevailing between Japan and Russia, and declares that it points to a rapprochement between the two Powers.

(Note—The long distance telephone between Tokyo and Yokohama was working so badly last night that the latter part of this message was almost unintelligible as received in Yokohama.)

THE BULLER INCIDENT.

Shanghai, Dec. 3.

There has been an orderly pro-Buller demonstration in Hyde Park.

THE BRITISH IN SOUTH AFRICA.

The Morning Post's correspondent at Brussels declares that Kruger's reports are said to show increasing want of ammunition, arms, and provisions among the Boers this spring.

The Cape Premier, Sir Gordon Sprigg, speaking at Cape Town, said that the Cape army in the field numbers 18,000 men and

that the Colony had incurred some debt in maintaining the troops, but the position is not discouraging. He was convinced that the war was rapidly drawing to a close.

PRESIDENT ROOSEVELT'S MESSAGE.

Shanghai, Dec. 4.

President Roosevelt's Message to Congress deprecates any change in the tariff; and recommends reciprocity so far as is compatible with the interests of home industries, while admitting that a more liberal policy is required to secure wider markets. The President strongly reasserts the Monroe doctrine and urges the necessity for steadily increasing the Navy so as to secure the respect of the Powers. He dwells upon the benefits as well as the evils of trusts but advocates legislation empowering the Government to inspect their workings before restrictions are imposed. The President further urges that stronger measures should be taken to exclude undesirable immigrants, and that measures should be adopted to foster the U.S. mercantile marine. He asks for the ratification of the Canal convention and the speedy construction of the Canal. The President finally urges the framing of a great policy of full and fair intercourse between China and the nations on a footing of equal rights to all, and advocates the policy of the open door which should include access to all internal waterways.

THE CORONATION.

Later.

The Coronation of King Edward VII. and his royal consort Queen Alexandra is fixed for the 26th June, 1902.

SOUTH AFRICA.

General Elliott has captured 12 Boers, 600 horses, 200 vehicles, and 300 cattle in the north of the Orange River colony.

THE LIVERPOOL BANK AFFAIR.

Golde, the Liverpool Bank bookkeeper, has been captured.

ANOTHER T.B.D. DISASTER.

The torpedo-boat-destroyer *Salmon* has been wrecked in a collision with a mail-steamer in Harwich harbour. Two stokers perished.

[Harwich harbour is one of the most ancient ports in the United Kingdom. It is formed by the estuaries of the Stour and Orwell. The mail-steamer which run up the Stour to Parkston Quay belong to the Continental service of the Great Eastern Railway Company. The *Salmon* was a t.b.d. of 280 tons, with twin screws. She was built at Hull in 1895, had a beam of 19.5, length of 200 ft. and draught of 5.25; with 3,580 h.p., and speed of 27.60.—Ed. J.M.]

SOUTH AFRICA.

Shanghai, Dec. 5.

Lord Kitchener's usual dispatch as to the operations in September says that the block-house system was largely extended, enabling the columns to operate each in its own sphere.

He attributes the invasion of Natal to the necessity of the Boer leaders tiding over Sept. 16th, which was the date of the expiry of the proclamation, in order to prevent a general surrender.

QUEEN WILHELMINA.

A later telegram says that prior to Queen Wilhelmina's miscarriage, she had an altercation with her husband, which had a bitter ending. The Prince insulted the Queen. Thereupon one of the Queen's aides-de-camp, van Teg, challenged the Prince. They fought immediately and van Teg was dangerously wounded. Subsequently another

gentleman of the Court fought with the Prince and was slightly wounded.

(RECEIVED AT THE FRENCH LEGATION.)
FRENCH NEWS.

Saigon, Nov. 29.

At the annual banquet of the Commercial and Industrial Society, M. Waldeck-Rousseau declared that it was necessary not to enlarge but to organize France's colonial possessions.

Saigon, Nov. 30.

The Chamber has voted, by 339 to 213, the Chinese loan and has addressed its homage to the expeditionary corps.

FRANCE AND TURKEY.

Saigon, Dec. 3.

M. Constans was received yesterday in audience by the Sultan at Constantinople.

CHINA NEWS.

Order reigns in Peking but numerous bands of brigands infest Chili. The Chinese Authorities punish severely any offences against foreigners.

PRESIDENT ROOSEVELT'S POLICY.

Saigon, Dec. 4.

At the opening of the Congress of the United States of North America, President Roosevelt's message was received. He advocated measures against anarchy; demanded the maintenance of the Customs tariff, and the development of the mercantile marine. He said that he desired peace and declared that the Munroe doctrine does not menace the American continent.

(RECEIVED IN TOKYO.)

CHINESE AFFAIRS.

Prince Ching was to arrive in Peking on the 29th inst.

An Imperial Decree has been issued that the Court will leave Kaifong for Peking on the 3rd instant.

The *Asahi Shinbun* publishes a telegram to the effect that, according to a distinct declaration made by the Russian Minister, the Newchwang-Shanhaikwan Railway will not be restored to China until the Manchurian problem is solved. On the other hand, England declares that she will not give up the Peking-Shanhaikwan line until Russia restores the Newchwang-Shanhaikwan. It is alleged that Admiral Alexieff's visit to Peking is in connexion with the Manchurian question.

THE CHINESE COURT.

The Imperial Court was to have left Kaifong for Peking on the 3rd instant, but owing to the Empress Dowager's indisposition, the journey has been deferred. It is now said that a start will certainly be made on the 10th instant.

NEW CABLES.

The Japanese Consul at Sydney reports that the cable between Australia and South Africa, the construction of which was commenced last year by the Eastern Extension Company under guarantee from the four Governments of New South Wales, South Australia, Tasmania and West Australia, was completed on the 19th of October, and was to be opened to traffic on November 1st. The same Company is now engaged laying cables between Freemantle and Adelaide, the Cocos Islands and Singapore, and the Cocos Islands and Ceylon.

TRIAL BORING IN SIBERIA.

The prohibition against mining for metals or kerosene at any point within 100 Russian leagues from the coast of Russian possessions, beginning at Korea and extending to Saghalien and its neighbourhood, was to go

into force from the 1st of the 10th month (Russian calendar).

MARQUIS ITO.

Marquis Ito left St. Petersburg on the evening of the 4th instant, and is to proceed to Berlin.

MR. KOMURA.

His Excellency the Minister of State for Foreign Affairs leave Tokyo to-day for Hayama, where he will remain about one week for the benefit of his health.

(FROM OUR OWN CORRESPONDENT.)

DESTRUCTIVE FIRE AT HIOGO.

Kobe, Dec. 5, 12.30 p.m.*

A big fire broke out at the Hiogo station of the Sanyo railway at 10.20 o'clock last night. A printing office, one new two-storied office, and one dwelling were destroyed. The loss is estimated at about yen 400,000. Trains stopped running from 10.30 p.m. to midnight.

* Delayed by interruption.

(FROM THE "N.-C. DAILY NEWS.")

YUNG LU.

Peking, Nov. 26.

It is stated that, acting on the advice of one of the Foreign Ministers, Prince Ching suggested to the Empress Dowager during one of his audiences at Kaifengfu, that H.E. Yung Lu should be sent as Viceroy to one of the provinces before the Court leaves for Peking, in order to withdraw his influence from the Throne.

MARINE DISASTER IN THE STRAITS.

Singapore, Nov. 27.

News has been received here of the wreck of Messrs. Wee Bin & Co.'s steamer *Amherst*, 108 tons, on the bar at Kuala Pahang on the 17th instant. Thirteen lives were lost, owing to the capsizing of one of the steamer's boats in the heavy surf. The victims were eleven Chinese coolies and two Chinese passengers.

BRITISH SUBJECT IN TROUBLE IN THE PHILIPPINES.

Hongkong, Nov. 27.

Telegrams from Manila state that the authorities there have decided to deport Mr. Patterson, who has been acting as secretary to Sr. Lopez, and whom Fiske Warren cunningly landed from the *Diamante* yesterday. It is added that the Customs detained his baggage, demanding that he should take the oath of allegiance, which Mr. Patterson refused to do.

The British Consul having guaranteed his conduct, Mr. Patterson has been allowed the freedom of the city until the *Yuensang* sails.

BURNING OF THE "FUSHUN."

The Naval Court of Enquiry into the *Fushun* disaster takes place at the British Consulate, Canton, to-day.

ARRIVAL OF THE "CRESSY."

Hongkong, Nov. 28.

H.M.S. *Cressy* arrived at Hongkong yesterday (Wednesday).

LOSS OF ANOTHER U.S. TRANSPORT.

Hongkong, Nov. 20.

News has been received by telegraph from Manila that the U.S. transport *Wright* struck a rock near Samar and sank in fifteen feet of water. Her crew and most of the cargo have been saved. General Smith telegraphs that she can probably be raised.

(FROM "DER OSTASIATISCHE LLOYD.")

EUROPEAN NEWS.

Berlin, Nov. 22.

Mr. Chamberlain has very considerably modified his statement in which he compared the British troops in South Africa and the German troops in the War of 1870-71. These explanations have evoked fresh protests in Germany and demands that the German Government shall enter a protest in London against Mr. Chamberlain's statements. On this the German

Government officially explained that there is a vast distinction between Mr. Chamberlain and the British Government. "We cannot take steps officially in the matter of this demand," the note goes on to say; "the German army stands too high in the estimation of the whole civilised world to be affected by false and indiscreet comparisons."

The Governments of the Great Powers are consulting together as to improvements in the police supervision of the anarchist element.

NEWS FROM THE NORTH.

Peking, Nov. 26.

Prince Chun received orders to go by special train to Paotingfu on the morning of the 17th (10th moon). He would be accompanied by Chang-yi, Sir Liang-cheng, Wang-kan, and the fleet-engineer of the Peiyang Squadron, Mr. L. Hesse, as well as a number of servants, etc. At Paotingfu Prince Chun will meet on the 18th Prince Ching and then proceed the following day in the direction of Kaifengfu. The Court has expressed its intention to leave Kaifengfu on the 23rd (that is the 3rd December), so that they will meet Prince Chun on the road about the 27th. The Court expects, according to orders received there this forenoon, to reach Peking within three weeks.

NEWS FROM EUROPE.

Berlin, Nov. 26.

The first Lord of the Treasury, Mr. Arthur J. Balfour, is dangerously ill.

NEWS FROM PEKING.

Peking, Nov. 28.

It is understood here that the object of Admiral Alexieff's visit to Peking is to consult with Mr. Lessar, the Russian Minister, on the Manchurian question.

Mr. Lessar has intimated that the Shanhaikwan-Newchwang railway will not be returned to China until the Manchurian question is settled.

Prince Ching is expected to arrive at Peking to-morrow (Friday).

NEWS FROM EUROPE.

Berlin, Nov. 28.

The late French Minister in Peking, Mr. Pichon, publishes a statement that none of the ladies of the Legations partook in the looting at Peking, but that two other foreign ladies were implicated in the matter. The French Legation had no connection whatever with the auction sales of looted things by other Legations, but Mr. Pichon hinted that this was done by the British and the American Legations. General Voyron in his secret report to the Government state that French soldiers have been induced by missionaries to loot, wherefore they received cheques; the Marines later refused to return the cheques.

Two trains of the Wabash Railway collided at full speed near Detroit, U.S.A. Eighty people are dead, and one hundred and fifty wounded.

NEW DYNAMITE GUN.

Highly successful tests of a new dynamite gun of destructive powers in excess of any weapon hitherto designed have just been privately conducted by a special board of officers of the bureau of ordnance of the United States Army at Fisher's island, said a New York dispatch of Nov. 11th. The Government has for several years been engaged in the erection on Fisher's island of fortifications on a colossal scale, intended to make the eastern entrance to the sound impregnable to naval attack, and secure the safety of all the cities along the Sound from New London to New York. In this system of defence the new dynamite gun, which is mounted so as to cover the channel between Fisher's island and Plum island, on which heavy batteries have also been erected, is expected to play an important part.

The utmost secrecy has been enforced by the Government relative to the works on Fisher's island, and the Government has not made public these tests. The gun, which was built in Scranton, Pa., was recently installed in a battery at the western end of the island. It is of the same pneumatic type as the guns of the batteries now in position at Sandy Hook and San Francisco, being forty feet long, with a calibre of fifteen inches, but embodies many new features, including rapidity of action and accuracy of fire. A new type of fuse has also been supplied which assures absolute precision of explosion of the

shells. The tests were made before a board consisting of Majors McNutt and Birney of the Bureau of Ordnance and many artillery officers from the forts in the vicinity.

With the high-calibre projectile the gun proved its ability to hurl 500 pounds of nitro-gelatine, said to be sufficient to annihilate any battle-ship afloat, a distance of about 3000 yards, with a degree of accuracy not excelled by the latest types of heavy rifled ordnance. Two days were devoted to the tests.

The first shot hurled a six-inch shell, carrying fifty pounds of explosive, a distance of 5,763 yards, bursting on impact with the water and sending a column of water 300 feet into the air. With a ten-inch shell, carrying 200 pounds of explosive, the extreme range was found to be 5,460 yards, the shell exploding under water with the desired delay action of two seconds. In the test for accuracy five eight-inch shells were dropped at the respective range of 5043, 5035, 5020, 5040 and 4970 yards, all of which would have taken effect, assuming that the target had been a battle-ship about three miles away, or about double the distance of 2500 yards now generally accepted as the limit of a practical fighting range.

In the test for rapidity of fire five full-calibre shells, weighing 1,185 pounds, or more than half a ton each, were discharged in eleven minutes and fifty-five seconds, almost bringing the weapon within the class of rapid-fire pieces. The test for endurance called for the firing within two hours of twenty-five "air shots," or what in an ordinary gun would be called blank cartridges, but no difficulty was experienced in firing forty shots in that time without any appreciable loss of pressure in the storage reservoir, the air pressure in the gun remaining uniform at each shot at 1,000 pounds.

KEROSENE.

The kerosene market is unchanged.

American	\$2.66
Russian	2.40
Langkat	2.35

SUGAR.

There has been no change in this market.

	PER PICUL.
Brown Takao	Y. 5.90 to 6.55
Brown Manila	6.35 to 7.30
Brown Daitong	5.80 to 6.00
Brown Canton	6.00 to 7.30
White Java and Penang	7.90 to 9.40
White Refined	9.95 to 11.70

EXPORTS.

RAW SILK.

We have seen another speculative movement during the last few days on the part of exporters who have forced prices up to the quotations given below. Japanese are now taking a hand in the deal and forcing prices further up, as they think foreigners will continue to follow the market still further. Advices from the home markets are dull with values far below those current on this market.

QUOTATIONS.

Filatures—Extra, Fine	Y. 940 to 950
Filatures—Extra, Coarse	940 to 950
Filatures—No. 1, Fine	920 to 930
Filatures—No. 1, Coarse	920 to 930
Filatures—No. 1 1/2, Fine	910 to 920
Filatures—No. 1 1/2, Coarse	910 to 920
Filatures—No. 2, Fine	890 to 900
Filatures—No. 2, Coarse	880 to 890
Common—Coarse	—
Re-reels—Extra	930 to 935
Re-reels—No. 1	910 to 915
Re-reels—No. 1 1/2	900 to 905
Re-reels—No. 2	870 to 880
Re-reels—No. 3	840 to 850
Kakedas—Extra	900 to 910
Kakedas—No. 1	870 to 875
Kakedas—No. 1 1/2	835 to 840
Kakedas—No. 2	790 to 795
Kakedas—No. 2 1/2	760 to 765

WASTE SILK.

There has been improvement in the best grades, which are scarce, while for medium kinds quotations rule unchanged. There does not seem to be the same speculative feeling in this market that there is in raw silk.

QUOTATIONS.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 14TH, 1901.

BIRTH.

On the 7th inst., at Hamburg, Germany, the wife of H. ABECK, Yokohama, of a Daughter.

MARRIAGE.

On the 8th inst., at the Swiss Consulate General, before Consul-General Coates and afterwards by Rev. Haas: PAUL RITTER, I.I.D., Swiss Consul-General, of Yokohama, to LOUISE HELENE REIDHAAR, of Basle, Switzerland.

SUMMARY OF NEWS.

MARQUIS ITO is spending a week in Berlin.

SIR THOMAS JACKSON, who goes home in the spring, has taken Stansted Hall in Essex, for a term.

It is announced that the Crown Prince will leave the Hayama Detached Palace for Tokyo on Saturday.

A DUTCH minister at Mafeking, named Wyl-cocks, has been sentenced to a year's imprisonment for inciting to rebellion.

HOLLAND has accepted from Great Britain £37,500 in settlement of all claims of deported subjects from the Transvaal.

A RELIGIOUS festival for the repose of the soul of the late Mr. Hoshi Toru will take place at Honmon-ji, Ikegami, on Dec. 22nd.

SIR FRANKLIN LUSHINGTON, Chief Police Magistrate of London, is dead. Deceased was the son of Mr. E. H. Lushington, a puisne judge of Ceylon.

MR. TSAI, Chinese Consul in Yokohama, was transferred to Nagasaki on Monday. He is succeeded by Mr. Wo-sho-zo, a Chinese resident of Shanghai.

At Sendai station on Dec. 6th a collision took place between a passenger train and a goods train, with the result that seven passengers were injured more or less seriously.

VISCOUNT AOKI gave a banquet at his residence in Rokubancho, Tokyo, on the evening of Dec. 9th, inviting thereto Viscount Tanaka, Mr. S. Chinda and many others.

An explosion of fire damp occurred in the Komatsu colliery, Fukuoka prefecture, on Dec. 10th and a miner was badly injured. The accident originated in a lamp.

OFFICIAL investigations made at the end of October placed the total number of convicts throughout Japan at 50,155, of whom 46,831 were men and 3,324 women.

THE Yokohama Post Office authorities intimated on Tuesday that cable communication with Hong-kong was restored on the eastern cable, but the Shanghai-Amoy cable was still interrupted.

CAPTAIN OYAMA and 52 others, who have been commissioned to bring home the Japanese torpedo-boat destroyer *Kasumi* from England, will leave Yokohama on Dec. 14th by the steamer *Wakasa Maru*.

An official message received in Tokyo says that in consequence of a storm that swept over Saghalien and the neighbouring seas toward the close of last November the submarine cable between Japan and Siberia has been broken.

OWING to the scarcity of stocks of Kishu flannel in Tokyo, many firms at Kobe are reported to be overwhelmed with orders from Tokyo merchants for the delivery of these goods. In consequence, the price has risen two *sen* per yard.

ANOTHER fracas is reported from Nagasaki. On the evening of Dec. 8th, fighting took place between a party of French sailors and some Japanese, resulting in men being injured on both sides. Two French sailors were taken to the police station.

SEEING that the use of bicycles has become the fashion in Tokyo and elsewhere, the Koishikawa Arsenal recently commenced the manufacture of bicycles, which are said to be offered for sale at about *yen* 70 per machine. It is stated that the authorities intend to carry out this new departure as a by-product.

INTELLIGENCE from Kobe reports that the steamer *Glengarry*, for whom Messrs. Jardine, Matheson & Co. are agents, ran aground near Minatogawajiri, Kobe, on Dec. 9th at 7 a.m., but she was successfully floated in about an hour. No injury was done to either passengers or cargo. The accident was due to a dense fog which prevailed at the time.

THE value of exports and imports at Yokohama and eight other open ports during last November amounted to *yen* 43,148,662, of which *yen* 25,668,193 were exports and *yen* 17,480,469 imports, showing an excess of exports over imports of *yen* 8,187,724. The export of gold and silver during last month was *yen* 2,125,777, including *yen* 2,011,721 of gold and *yen* 114,056 of silver. The importation of the metals was represented by *yen* 694,559, including *yen* 657,696 of gold and *yen* 36,863 of silver; being an in-

crease in exports of *yen* 1,431,218. The trade between Formosa and Japan during last month reached *yen* 2,183,881 in value, including *yen* 654,133 of exports and *yen* 1,529,748 of imports, showing an excess of imports of *yen* 875,615. The export of gold and silver amounted to *yen* 150,037 and imports *yen* 30,251, being an increase of *yen* 119,786 in exports.

SINCE a Naval Station has been opened at Maizuru, Osaka citizens have been taking steps to facilitate the conveyance of goods between the two places. It is now reported that as the result of consultations between the citizens and the Hankoku Railway Company goods can now be supplied to the Admiralty in 24 hours, whereas they formerly took 48 hours in transit.

THE Tokyo Sanitary Association has decided to present to Miss Mary Jones, a British nurse, a roll of white *habutae* and a letter of thanks in recognition of the faithful services rendered by her at the Komagome Hospital, Tokyo, where she has been a nurse from April 26th to October 31st this year with a view to teaching the methods of British nursing. The presentation was to have been made on Dec. 9th in the name of the Mayor of Tokyo.

THERE is in Yokohama an Association called the Yokohama Kyokai, organized by the Japanese porcelain merchants, and of which Governor Sufu is President. This association celebrated its seventh anniversary several days ago. It is stated that the export of earthenware amounts to between three and five million *yen* every year but owing to the fact that porcelain painting is still in its infancy here the President and others interested are considering means for improvement in this direction.

CAPTAIN SOTORA and a few other naval officers left Yokohama for America on Tuesday on an official mission. It is understood that they are entrusted by the Government with the task of investigating the methods of wireless telegraphy used in America and Europe with a view to further improving the system now installed in the Japanese Navy. In this connection, a Tokyo paper says that according to recent experiments made by the Naval authorities communications for a distance of over 50 miles have been successfully transmitted.

At a meeting of the Yokohama Japanese Chamber of Commerce held a few days ago various subjects were discussed. Among them were items relating to the increase in the representation of Kanagawa prefecture in the House of Representatives; the question of Hiranuma station; the election of half the special members of the Chamber, and the re-election of other members, all of which were put aside to be considered at the coming general meeting of the Chamber. With regard to the proposal of improving Yokohama station, it was considered necessary to first ask the opinion of the Authorities before any scheme of improvement is promulgated.

SIR FRANCIS LOVELL has started on an extended tour in the tropics for the purpose of making known the aims and objects of the London School of Tropical Medicine. He left Marseilles on 27th Oct for Bombay; thence he will proceed to Hyderabad and other Native States, the North-West Provinces, the Punjab, the Central Provinces, the Madras Presidency, Bengal, Burmah, Assam, then to Ceylon, the Straits Settlements, British North Borneo, Brunei, Sarawak, and Siam. Sir Francis will next proceed to China, visiting Hong-kong, Peking, and the Treaty Ports, after which he will go to Japan, the Philippine Islands, Australia, New Zealand, and the United States, returning *via* Canada.

CHINESE NEWS.

Saturday, Dec. 7.

The Imperial Customs authorities in China seem to have proceeded in a somewhat arbitrary fashion when fixing the course to be pursued pending the completion of the new specific tariff. They announce their intention of levying *ad valorem* rates of 5 per cent., effective, and then they declare that for tariff purposes the Statistical Secretary's List of Values for 1897 is to be taken. Such a method means that a system of specific duties is applied, pure and simple, for whether the average values for three years be taken, as is the intention of the framers of the specific scale, or whether the values for one year be taken, the result is the same: specific duties are levied. Stranger still is the announcement with regard to goods which can not be satisfactorily determined from the Secretary's List and of which the market value of the day can not be ascertained. Such goods are to be assessed at invoice values *plus* 10 per cent. by way of freight and charges. Now, in the first place, it is obvious that this method can not operate fairly. Goods coming from Europe or America, cost much more in transit than goods coming from Japan, and it is plainly unjust to class them together for purposes of valuation. Finally, a moment's reflection will show that to add 10 per cent. to the invoice price without regard to the nature of the article, may work most unjustly. Coal, for example, which is invoiced at about 6 *yen* a ton, will pay only 60 *sen*, whereas cotton yarns invoiced at 300 *yen*, will pay 30 *yen*. We are surprised that the experts of the Imperial Customs have not shown more perspicacity.

It is impossible to know what is going on behind the scenes of the Manchurian drama, and in the absence of definite information, all kinds of rumours are circulated. The latest allegation is to the effect that an interview between Mr. Uchida, Japanese Representative in Peking, and Prince Ching probably gave rise to the rumour that Japan's opposition had again blocked the path to an agreement, but on the other hand, it is affirmed that Mr. Uchida's remarks did not go beyond suggesting to Prince Ching that any settlement which involved a surrender of China's rights of sovereignty and self-protection in Manchuria would not be viewed favourably by other Powers, and would create a situation the heavy responsibility of which would have to be borne by China. Sir Ernest Satow is said to have made a practically identical representation to Prince Ching. We do not venture to affirm or to deny the truth of these reports. It is very conceivable that they have their origin altogether in the delay to which the negotiations have been subjected by the death of Viceroy Li. There is further a suggestion that the Court is determined not to return to Peking until Russia evacuates Manchuria, but the Court itself does not seem to have made any such futile announcement. Some Japanese journals write in a spirit of gratulation that another check has been imposed upon Russia's aggressive designs. It remains to be seen, however, whether the latest proposal for an agreement emanated from China or from Russia. When a man finds a part of his estate in possession of another whom he is unable to expel by force, he not unnaturally becomes anxious to effect some arrangement. That is China's case, and the only legitimate part for foreign Powers is to warn her that the terms she makes with Russia will be closely scrutinized, and

will become the origin of a troublesome situation if they deprive her of competence to discharge her treaty obligations in Manchuria. Japan has the strongest case of all, for Manchuria was practically her property by right of conquest six years ago, and she can not consent to its acquisition now by the Power which led a combination to deprive her of it then. On the other hand, Russia has to be considered. Russia is a great Power. Nothing that requires any sacrifice of her dignity can be tolerated by her, or ought to be proposed by foreign States. She seems to be honestly anxious to find some satisfactory *modus vivendi*, though she cannot—and it would scarcely be reasonable to expect that she should—withdraw her troops forthwith and leave her railways at the mercy of a population which has suffered some of Skobeloff's measures at her hands. It is eminently an occasion calling for mutual concession and conciliation.

Monday, Dec. 9.

A long telegram to the *Asahi Shimbun* from Peking says that before Prince Ching set out for Kaifong the Representatives of America and England urged upon him the advisability of pressing the Imperial Court to take a resolute step such as should placate the Powers. The measures suggested by their Excellencies were four; first, that Yung Lu should be finally degraded and deprived of all share in the administration; secondly, that General Tung Fuh-sheng should be executed; thirdly, that the Empress Dowager should cease to control affairs, and fourthly that something else should be done which the correspondent fails to state. It is believed that the Empress will endeavour to carry out the first two of these proposals, but that the third—and, the correspondent adds, the fourth also, from which the *Asahi* conjectures that the missing condition is the complete restoration of the Emperor—will be strenuously opposed by her. There is a rumour that her Majesty has instructed Viceroy Yuan to sound the Foreign Representatives as to whether these demands are imperative. It is further reported that although the Court has nominally fixed the 14th as the day of its departure from Kaifong, the probability is that the result of Viceroy Yuan's enquiries will be awaited.

It appears to us that little credence can be placed in this rumour. Evidently such a message as the two Representatives are alleged to have sent would have the effect of causing the Court to reflect seriously before returning to Peking. The Empress Dowager is not likely to return merely for the purpose of divesting herself of her authority, and if she knew that a step of that kind was expected by the Powers, she would take care to remain beyond their reach. Very likely it would be an excellent thing for China if the Emperor were allowed to assume control of the administration, but that is precisely one of the results about which the Foreign Powers would be sure to differ. So much capital could be made by any one of the great States which refused to co-operate for the deposition of the old lady that the temptation to take an independent line would be irresistible. Thus, by bringing the question practically upon the *tapis* at this juncture, the return of the Court would be postponed, if not altogether prevented, and an apple of discord would be thrown into the camp of the allies. Besides, are America and England prepared to enforce such a programme in the event of conciliatory means failing?

The Manchurian agreement continues to be a subject of rumour. It is now said that Prince Ching's original idea was to take the late Viceroy Li's proposals as a basis, with slight modifications, but that, owing to strenuous representations from other Powers, especially England, he has changed his mind and is disposed to abstain from making any agreement at all. Under any circumstances he will await the coming of Wang Wen-shao before resuming the negotiations. Meanwhile it is said that M. Lessar is pressing strongly for a settlement, but inasmuch as the proposal for an agreement is supposed to have come in the first place from Li Hung-chang, the Russian Representative is scarcely in a position to "press."

Another piece of intelligence from Peking is that since Viceroy Yuan's arrival in Peking he has had many interviews with the Foreign Representatives, and that he is found to entertain, with regard to the Manchurian question, the same views as the Yangtze Viceroys and Prince Ching.

Tuesday, Dec. 10.

Wang Wen-shao arrived in Peking on the 8th instant, and it is expected that the Manchurian negotiations will be taken up shortly.

The *Chiao Shimbun* publishes a long letter said to have been secretly despatched by Mr. Lessar, on the 16th of October, to Yung Lu. The alleged reason for sending such a letter is that Mr. Lessar had become doubtful as to the possibilities of concluding a satisfactory Manchurian agreement. It is unnecessary to translate the letter. The public must be weary of these "secret" despatches, conventions and proposals. Neither do we see how the *Chiao Shimbun* can possibly have become possessed of a genuine copy of such a despatch, supposing it to have been sent at all, which we greatly doubt. In fact, the whole affair presents itself to us in the light of a journalistic "fake" which may interest unreflecting persons for a moment, but can not bear close scrutiny.

The *Asahi Shimbun* justly remarks that while no one desires to dispute the titles Russia possesses to guard her railways in Manchuria, and while Japan is not for a moment averse to the conclusion of arrangements pointing to that end, it is necessary that there should be no violation of China's sovereignty. Russia must recognise that whatever troops she places in Manchuria are posted there with China's permission, and that their number is regulated in accordance with China's wishes. That, however, is not the tone of the agreement a draft of which is now awaiting discussion. The terms place Russia in the position of sovereign and China in that of an outsider. Unless that method of procedure be changed, Japan can not give her assent, although she may be desirous of extending every just recognition to Russia's claims.

Wednesday, Dec. 11.

Viceroy Yuan is represented as expressing great dissatisfaction that the court officials failed to carry away the imperial seal when they fled from Peking, and that it had to be subsequently guarded by Japanese troops. It is further alleged that he has declared himself resolutely opposed to any concession in the matter of Manchuria, and that he will do everything in his power to strengthen the hands of Prince Ching.

The officer commanding the British troops in China has proposed that the names of the men who lost their lives in effecting the relief of Tientsin should be inscribed on a pillar at the Gordon Hall in that city. The proposal has been warmly approved and the Japanese authorities have sent in 152 names; that is to say, 9 officers, 17 non-commissioned officers, 125 rank and file and one *employé*.

Friday, Dec. 13.

It is plain that the Chinese Court is taking care that no cloud shall mar the brilliancy of its progress back to the capital from which it fled last year. We read that His Excellency's Sheng's contribution to the affair has been to send four taotais and two district magistrates to make preparations for the entertainment of the Emperor and the Empress Dowager on the railway journey from Chengting to Peking, and that when these six deputies started from Tientsin to discharge their mission, they took with them 180 large boxes containing imperial yellow embroidered draperies, porcelains and other paraphernalia, all of the most magnificent and costly description. That is Sheng's subscription to the comfort of their Majesties' journey.

It is stated that Lu Tien-ling has resigned, and that two officials, followers of Yung Lu, are candidates for his post. The Emperor is represented as ready to decide but the Empress hesitates.

The Empress Dowager is alleged to be anxious not to leave Kaifong until the negotiations have been completed for restoring the civil government of Tientsin to the Chinese. Viceroy Yuan has been endeavouring diligently to effect this since his arrival in Peking. It is thought probable that a delay may thus be caused in the return of the Court, since Viceroy Yuan strongly recommends that the restoration of the civil authority should precede the Court's re-entry into the capital, though Viceroy Chang Chih-tung does not take so strong a view.

The Consuls in Shanghai are reported to be anxious for the establishment of a general foreign settlement in Peking.

Rumour continues to represent Viceroy Yuan as radically opposed to the Manchurian agreement.

A majority of the Imperial relatives are reported to be desirous of seeing the Emperor's younger brother (by another mother) elevated to the position of Prince Imperial in lieu of Prince T'wan's son.

Wang Wen-shao reached Peking on the night of the 8th and had a long conference with Prince Ching the next morning. The *Asahi Shinbun's* correspondent says that Prince Ching visited Mr. Uchida, the Japanese Minister that afternoon. Wang is said to be working in consultation with Prince Ching, and not to be doing anything independently.

A NEW STEAM-SHIP SERVICE.

It is expected that a Russian service of steamers will be opened next year from Vladivostok to Tsuruga in Echizen, to establish connexion with the Trans-Asian Railway. Three large steamers are already available, and two others are to be quickly provided. This is a service that might well be undertaken by the Japanese themselves, but there is talk of duties and discriminations such as would render it difficult for any non-Russian ships to engage in the work.

POLITICAL NOTES.

Saturday, Dec. 7.

The Progressists held a general meeting on the afternoon of the 5th instant, and took some important steps. They voted that the election of a president should no longer be a yearly affair, Count Okuma being permanently appointed to that post; and they abolished the political committee of five, substituting a Council of ninety nominated by the President. They then passed the manifesto, of which we gave a précis in our last issue, after which Count Okuma made a speech, of which the following translation is given by the *Japan Times*:—

"The eyes of the world are now being centered on the course of events in the Far Orient and the time has come when this country, as a newly arisen Power of Eastern Asia, will be called upon to measure its lately acquired strength with the old established forces of Europe in the area of competition. While the situation is as stated, we have amongst us a set of fatalists, who having but a vague idea of the strength and position of their own country will persist on saying that it will be setting impossibility at defiance to enter into rivalry with Europe,—who will persist in belittling themselves. This disease, this style of thinking, is affecting a large section of officials and of the general public. This delusion counts among its victims even those who are generally thought to be well informed and you may well imagine what influence it is wielding among the rest of the people. Yet turn your eyes to America, or to England, to Germany, France, Russia and see what treatment Marquis Ito is being accorded in those countries. Why, the Marquis is being received, everywhere he goes, with the same extraordinary degree of enthusiasm, respect and attention, as would be accorded to the greatest statesmen of Europe or America. Do you think that it is the personality of Marquis Ito which is drawing so much attention to him? Do you think again that the Marquis is thus honoured as an historical character? I do not think so, I think all this is because both Europe and America have now awakened to the greatness of the power and influence now possessed by Japan.

"The foreign relations of Japan are to-day unusually smooth and amicable in every direction, the North China affair having been brought to a peaceful termination. Yet no one knows when a change may come over the situation. In the event of an emergency and of being confronted with the problem of how to settle any Far Eastern question that may arise, there is no Power but will find it a matter of vast difference to have Japan on its side or otherwise. Thus it will be seen that to maintain the peace of Eastern Asia by enlarging the sphere of Japan's influence will depend on her national strength and the self-confidence of her people. To-day our country is teeming with a rapidly increasing population and the force of circumstance makes it imperative that we should greatly develop our trade and industry and at the same time encourage emigration. But the progress of trade and industry and of emigration can take place only when a nation's star is in the ascendant. It is a patent fact, a fact which admits of no doubt, that with the rise of a nation its commercial and manufacturing enterprises will prosper, while its decline will bring about commercial and industrial decadence. We thus see the necessity of maintaining and protecting our trade and industry with a power and influence that will command both fear and respect.

"It should be noted, however, that in the affairs of a nation a change is often superinduced by influences that come from without. An instance was when the great work of rejuvenation was effected in this empire as a result of the coming of Perry. And I think indeed that the future will bring to us many more foreign stimulants and it is important that we should never forget to make the best possible use of these stimulants.

"Coming to the question of our finances I wish to call your attention to my declaration before you last spring when I said that our economies would no longer admit of any policy of accommodation and that there was hardly any hope for the successful flotation of a loan. You now see that the present Ministry failed in its attempt to raise a loan in America although it had offered, as I understand, a very high rate of interest. The patch-work policy unavailable and no loan obtainable either at home or abroad, how is the difficulty to be met? It being out of the question to stop any national undertaking of a productive character, I maintain that the work on this class of undertaking should be continued by appropriating all the money there is in the Government coffers. In other words all the expenditure in these connections will have to be met out

of the ordinary revenue. Such being the view we hold on the question before us, some people appear to have been betrayed into a belief that our party had made approaches to the Government on the strength of that view. But it should be remembered that the Ministry first tried to raise a foreign loan and that it was only after its failure in that attempt and after it had come to repent of its error, that the Government as a last resort has been forced to adopt a financial scheme coinciding with ours.

"Some say again that our attitude *vis à vis* of the Cabinet will be a friendly one while others say it will be a hostile one. Our answer is that when dealing public affairs our party knows no friendship and no hostility."

Little is heard now of the Imperialists, that small body of men who alone have the courage to declare themselves supporters of the present Cabinet. They held a general meeting on the 5th instant, and passed resolutions indicating a resolve to be guided solely by national considerations and to discard party interests altogether in dealing with public affairs. In the course of a short speech, Mr. Sasa Tomofusa, the leader of the Party, said that Japan might fairly congratulate herself on the result of the last Chinese trouble. In 1894-5, she had been successful in arms but unsuccessful in foreign policy. In 1900 she had been successful in both.

Monday, Dec. 9.

The Progressists met on the afternoon of the 7th, subsequently to the rising of the Houses, and elected Mr. Kono Hironaka to the position of President of Assembly of Members; Mr. Yasukawa Shigenari to that of Vice-President; and Mr. Taketomi Tokitoshi to be leader of the Party in the House.

The *Asahi* Club and the *Koshi-kai* of the House of Peers have amalgamated under the name of the *Doyo-kai*, or the "Saturday Party." There is already a Thursday Party. The new Saturday Party comprises 55 members and its president is Prince Nijo. This Party may be regarded as the backbone of the Opposition in the House of Peers. It includes all the obstructionists, Viscount Tani, Viscount Ozawa, Viscount Soga, Mr. Kubota Yuzuru and the rest of the familiar opponents of every cabinet.

Wednesday, Dec. 11.

The General Committee of the *Seiyu-kai* has adopted a number of resolutions with reference to education. Some of them are couched in very general terms, but two have explicit and important significance. They are, first, that in view of the Constitutional provision guaranteeing freedom of conscience, there ought to be absolute religious liberty in schools, the faculty and the students being left to observe whatever forms and ceremonies of religion they affect; and, secondly, that the distinction between public and private schools in the matter of official privileges ought to be abolished. These are two reforms which we would most gladly see adopted. They have often been discussed in our columns. The liberty of religious belief granted by the Constitution can not be reconciled, in our opinion, with the rules which abolish every form of religion from private schools under penalty of serious disabilities. State supported institutions towards the maintenance of which all sorts and conditions of subjects compulsorily contribute, should not be allowed to become instruments for propagating any special form of religious belief. That, too, would be a violation of the Constitution. But private persons ought assuredly to be free to have their children educated in their own faith. So too of the discrimination now exercised in favour of public schools. Its tendency is to steadily discourage private educational

enterprise; a fact clearly demonstrated by the gradual reduction in the number of private schools. That result is surely not conducive to national interests.

The Government has submitted to the Diet two bills, one relating to railway construction, the other to State enterprises. Upon the fate of these bills will largely depend that of the Budget, for the appropriations in the latter are based upon the assumption that the Houses will approve the policy of restriction rendered necessary by the financial conditions of the moment.

Friday, Dec. 13.

These two parties have failed to effect an amalgamation. So far as we can see the question which divides them is one of name only. The *Kenseihon-to* invite the Two or Three Club to join them on the ground that the Party's organization should be extended as much as possible. The Two or Three Club propose union on the ground that the formation of one great party is essential. At first sight the two programmes seem identical. But closer scrutiny shows that whereas the *Kenseihon-to* want to increase their own following, the *Sanshi Club's* aim is to have a new party. An agreement has therefore been found impossible, but we do not see that the fact has much political consequence, for the *Sanshi Club* will vote with the *Kenseihon-to* under any circumstances.

GERMAN TROOPS IN SHANGHAI.

We recently quoted a leading German journal which said that the placing of a garrison at Shanghai was an outcome of the Anglo-German agreement as interpreted by Germany. The Berlin correspondent of the *Standard* gives the following account of the step and of Germany's military programme in the Far East:—

The German East Asiatic Garrison Brigade will be stationed at five different places in the Province of Pechili, and the sixth post will be established at Shanghai. The latter is the natural station for recruiting, and a German garrison there is of great political importance. For this reason a pretty strong garrison will be stationed there, consisting of the Staff, the 1st and 2nd Battalions of the 1st East Asiatic Infantry Regiment, and 3rd Mountain Battery of the Field Artillery Division. The Krupp mountain guns proved to be the best on the different expeditions in the mountains—as at Kuangsheng, the Pass of Anshing, and Huoli. Engineering troops will not be stationed at Shanghai because mechanical facilities are lacking there. Tientsin has been selected as a centre for the Staff of the five points where all the military officials will be, together with the Staff of the Garrison Brigade. The Staff of the 2nd Infantry Regiment, together with the 1st and 2nd Battalions, the Staff of the 3rd Infantry Regiment, and the 3rd Battalion, the Squadron of Mounted Chasseurs, the 1st and 2nd Howitzer Batteries, the Pioneer Company, including railway and telegraph troops, the Train Company, the Sanitary Company, and the Field Hospitals, Nos. 1 and 2, belong to the garrison at Tientsin. The Field Artillery and the Pioneers have given the other stations in Pechili various detachments. The 1st Battalion, three regiments, and a Pioneer detachment, have been stationed at Yangtsun to guard the railway line from Tientsin to Peking; the 2nd Battalion of this regiment and Pioneers will be at Langfang for the same purpose. The 3rd Battalion of the 2nd Regiment of Foot, detachments of Field Artillery, and Pioneers are at Peking as the garrison of the German Embassy. The 3rd Battalion of the 1st Regiment of Foot, with a Pioneer detachment, has been stationed at Shanhaikuan, the possession of which is of great importance during the winter because of its open harbour, the Taku harbour being then frozen. Experience in China has shown the great importance of Pioneer troops, which have done good work both as infantry in battle and for engineering purposes. A Division of Mounted Infantry, consisting of soldiers from the 3rd Navy Battalion, was recently organised at Kiaochow.

THE HOUSE TAX.

"Centaur" has again approached this question. He makes the following point:—"The leases of land within the Foreign Settlements were sold to subjects and citizens of Foreign Treaty Powers at an upset price (the estimated value of the land at the time), but many of the lots fetched prices more than the upset price; on this land, all unimproved, the purchaser had to pay an annual 'Land Rent,' being exempted from paying any other rent, tax or impost whatever."

The correctness of these statements is open to question. If the argument as to the sale of the land at upset prices has any value, what shall be said of land which was not sold at all, but was given to the subjects and citizens of Foreign Treaty Powers free of all charge? Does "Centaur" know that a great part, if not the whole, of the land in the original settlement of Yokohama was thus treated, and that there never was any charge for the settlement lots in Nagasaki?

As to the statement that the "upset price" was "the estimated value of the land at the time," there is no evidence in support of it. On the contrary, the upset price was explicitly fixed on the basis of recouping the outlay incurred by the Authorities in reclaiming and levelling. It must always be remembered that the foreign land-holders did not acquire any right of property in the land. They became simply perpetual lessees, and as such had to pay a rent. "Centaur" doubtless knows that if any one now attempted to rent building land in the Japanese section of Yokohama for 28 *sen* per *tsubo* annually, he would be laughed at. The regular rate for renting land in Japanese cities is one *sen* per month for every *yen* of the land's selling value. Land worth 50 *yen* per *tsubo* costs, consequently, *yen* 6 per *tsubo* annually. A hundred *tsubo* of building land in Nagata-cho, Tokyo, could not be rented for less than 240 *yen* per annum, and in the suburbs of the city, as Azabu or Shiba, the lowest charge would be from 90 *sen* to 1 *yen* per *tsubo* annually. The 28 *sen* paid by the foreign land-renters of Yokohama is not composed entirely of land-tax and land-rate. It includes also a rent, and considering the price originally paid for the land, as well as the fact that all the most valuable portions were given gratis, it is probably the cheapest land in the whole empire.

This is not a matter of conjecture. When it was proposed that the municipal control of the Settlement of Yokohama should be handed over to the foreign community, the portion of the land rent which was to accompany the transfer and which was to go towards defraying municipal expenses, was 20 per cent. of the total charge under the lease. Evidently, therefore, the theory at that time was that 80 per cent. represented the rent and the imperial tax. It would, perhaps, be impossible now to ascertain exactly how the Tokugawa authorities made their calculation as to rent and taxes, but that the charge included a rent can not be doubted, and it becomes necessary to deduct that rent before any comparison is set up between the sum paid by the foreign land-holder and that paid by his Japanese neighbour as taxes.

"Centaur" refers to a provision that foreign lessees "shall conform to the regulations made by the late Governor of Kanagawa and the Consular Authorities, and to such further Regulations as may at any future time be made by the Japanese local authorities and said consuls in conjunction," and he says that so long as the joint action there

indicated is not taken, he doubts "the power and the right of the Japanese Government to impose a further tax or rent on the property." It appears to us that "Centaur's" argument would be stronger if he did not seek to support it by such frail props. It is inconceivable that he can be ignorant of the fact that the system of Foreign Settlements has been explicitly abolished by treaty, and that the joint jurisdiction of the Consuls in Settlement affairs disappeared simultaneously with that abolition. If he rests his case upon such a foundation, it will not stand.

We note, also, another point made by him:—"As to the foreign land-owners (*sic*) paying more taxes than their Japanese neighbours, there can be no doubt, and their former settlements are an object lesson to the Japanese authorities. The formation of this better state of affairs is the result of the good management of former foreign municipal councils." That becomes quite amusing. To what "foreign Municipal Council" are we to attribute the credit of the present state of Yokohama settlement?

THE LOOT QUESTION.

It is alleged that Viscounts Torio and Miura advocate the settlement of the loot question by removing to the retired list the senior officers who took part in the affair. Viscount Terauchi and Baron Okazawa, on the contrary, are in favour of allowing matters to rest, whereas other officers of the Head Quarter Staff take a very strong view. Some decision is likely to be taken so soon as Baron Kodama can be consulted.

What all this is about, the foreign public can not tell. Nothing was heard of Japanese looting while the campaign was in progress. A great deal was said about other nationals, but the Japanese escaped unnoticed. That, of course, is no reason why the offence should be condoned if it was really committed. But we confess that experience has made us very sceptical about the intrinsic value of these agitations fomented from time to time among Japanese politicians. The accusation against a distinguished officer in the present case takes the form that he managed to pay his debts with the proceeds of goods obtained in China and sold in this country. Does it follow that he behaved dishonourably? In the first march to Peking when the Summer Palace was looted by the French, a distinguished British Consular official, afterwards a Minister Plenipotentiary—a man absolutely incapable of the remotest approach to a mean or dishonest act—brought away 23 large cases of objects of art, 13 of which were lost *en route*. We have heard him describe more than once how he picked up the things for petty prices when they were offered for sale by soldiers and Chinese camp-followers. Doubtless if every one abstained from making such purchases, the incitement to loot would be materially diminished. But unfortunately that plane of morality has not yet been reached. Before condemning the Japanese officers who are said to have carried home valuable souvenirs, it would be just to inquire how they obtained them.

American newspapers continue to discuss the question of the missionaries and loot, and discuss it in a manner which seems to us very unjust. Attention has been directed anew to the matter by an utterance of Dr. Ament's at a recent meeting of the American Board in Hartford. He said:—

"Missionaries have had some influence in the punishment of red-handed Boxers. Why not? Missionaries have assisted in the collection of indemnities for the people who look to them as leaders

and defenders. Why not? Christianity recognizes the payment of honest debts. Christianity recognizes the right of the individual. Christianity teaches the supremacy of law and the privilege of treaties. While the Christian may take with joy the spoiling of his goods, he will not fail to rejoice when those goods are restored to him. Being a missionary or a convert from heathenism in North China by no means make an outlaw of a person nor, indeed, should it be so.

"Christ would not unman a person on his becoming a Christian, nor deprive him of the exercise of his common sense, nor take away the vigour and energy of his manhood. Why should not those who unjustifiably deprive our people of their homes and property restore that which they had stolen? This is the payment of an honest debt, not retaliation. The ideas of justice which all men have, and which are a part of the fundamental constitution of man, approve such a step as this, and the method of securing this end will not offend, but rather secure the approval of the well-informed."

Concerning this the *Boston Herald* says:—

"It is not for missionaries to have 'influence,' if by influence he means more than testimony to facts in their own knowledge, in the punishment of red-handed Boxers, because they are neither official judges nor official executors, neither representative diplomats nor commissioned soldiers. They are not citizens of China, they are foreigners and intruders. That they are tolerated at any time and suffered to engage in a proselyting work that the natives may not improperly consider to be subversive of their ancient religious and civil security does not show that they are not in fact intruders, gives them no lawful nor ethical privilege of punitive proceedings against any sect or party of the Chinese, whatever they may do. The right of personal self-defence when physical harm is threatened may be approved; the right of guarding their own property at the time when it is attacked, as well as they can, must be conceded. These things are quite different from any right in law or ethics to execute punishment upon the Chinese people for the wrong action of any of them. This is solely the affair of the government of which the missionaries are citizens."

With reference to the last paragraph of Dr. Ament's rejoinder, the *Herald* says:—

"It suggests that the author of the statement needs to spend a full year in a divinity school where the ethics of the Preacher of the Sermon on the Mount are intelligently taught, and another year in some school where he may get sound instruction in the ethics of the common law with some respectable notion of logical reasoning. If Christianity in its essential quality were what the suggestions of this deliverance intimate, the world would have little more need of it. Robin Hood's way of collecting 'just debts,' or the motive of the Boxers' way of avenging supposed wrongs, would seem to be vindicated. We have no disposition to discuss the matter, and leave it with an expression of regret that it emanates from a missionary addressing the American Board. . . .

"There is in the address no denial or contradiction of facts currently charged, no dissent from the shocking confessions and worse defences of Gilbert Reid, only hardy and insistent assertion of the righteousness of essentially barbarian customs of punishment and reprisal."

The so-called "shocking confessions and worse defences" of Mr. Gilbert Reid are these:—

"Without going into any lengthy defense I will say this much. The three houses from which I secured my 'spoils of war' were those of high officials implicated in the Boxer uprising and imperial attack. Everything in these houses was officially confiscated; and what I secured was with consent of such authorities as a French general, the British minister, and our American officers. Under these circumstances I have no qualms of consciences in what I did. I firmly believed that all such men (despicable wretches), who nearly encompassed our massacre, should be punished, and I did what I could to point out to the authorities where these guilty men had lived. This was 'the now and then' of my looting. All my denunciations have been hurled at the guilty ringleaders, and, so far as I know, justice allows no leniency in dealing with such. . . .

"Taking cases of looting in themselves, my conscience would heartily condemn many of them; but when I consider the circumstances and view the matter as a whole, I am forced to reiterate the statement made in *The Forum* for July on 'The Ethics of Loot,' that if there was wrong it was in the war, 'not in the incidental result of the collection of spoils.' I contend that looting was a form of punishment, without which the officials and people of Peking would again be likely to undertake the task of exterminating all foreigners in China. As it is, they will not attempt it again very soon, certainly not in Peking."

The *Boston Herald*, it will be observed, declares that "we have no wish to discuss the matter and leave it with an expression of regret that it emanated from a missionary addressing the American Board." That is a hackneyed and contemptible newspaper device. After saying the hardest possible things about Mr. Ament and dissecting his utterances in the severest manner, the *Boston Herald* disavows any wish to discuss the matter and leaves it with regret. The whole question seems to us to be well-summed up in Dr. Ament's analysis. Do the missionaries cease to be men with rights and with civil responsibilities because they have adopted the duty of preaching Christianity? The query must sound ridiculous in the ears of intelligent men. There is not the smallest excuse for a missionary or any one else who deliberately robs Peter to pay Paul. The looting of an enemy's goods even under that plea generally assumes the form of mere thieving. But to say that a missionary is not entitled to assist his converts to defend themselves against spoliation or injustice, or to recover from their spoilers some equivalent for the things of which they have been robbed, is an extravagant proposition. In the case of Mr. Gilbert Reid his "shocking confessions and worse defences" amount to admitting that for the support of famishing Christians who found themselves without shelter and without food, he took a portion of goods which had been already confiscated by the Allies, and which he was authorized to take by a French General, by the British Minister, and by American officers. It is pure foolishness to call such a procedure "looting." The truth is that the passions and prejudices of those concerned in this controversy have quite obscured the facts. "Mark Twain" would have been wiser had he kept out of it. He has shown that whatever may be his gifts in the matter of wit and humour, he has not a very clear perception of justice or fair-play.

THE EDUCATION SOCIETY.

The Education Society of Japan held its 18th general annual meeting in the Imperial Hotel on the 8th instant at 9 a.m. An animated discussion took place as to the propriety of requiring that all students, whether girls or boys, attending preparatory schools should wear short-sleeved surcoats and *hakama*. Tokyo newspapers do not publish the arguments advanced by the advocates of the measure or its opponents, but the result was that no decision could be reached, and the question was tabled. Probably that was the wisest course. Heroic measures are not advisable in such matters.

The most interesting incident of the meeting was a speech by Dr. Kikuchi, Minister of State for Education. His Excellency denounced in uncompromising terms the present system of "cramming" students with knowledge which they can neither comprehend nor digest. It is a common thing to put into students' hands books far beyond their capacity, and though there may be a certain satisfaction to some thoughtless parents or superficial teachers in being able to say that sons or pupils are reading Carlyle, Mill, or Spencer, the result for the students themselves is most fatal. They grow disgusted and disheartened, lose all taste for reading, and instead of continuing their education after leaving school, abandon it altogether. Indeed, the Minister let it be seen very clearly that he does not approve of the present manner of teaching, especially

on the part of language-instructors. A common habit with them is to do all their work in writing. Not having competence to deliver lectures or incur the risks of oral teaching, they compile sentences from books and hand them to the students, so that the papyrograph becomes as important an instrument of teaching as the teacher himself.

Most true all that is. But what is the real germ of the trouble? Is it not what foreign observers have pointed out again and again, namely, that through lack of foreign instructors contact is lost with the great world of thought beyond the limits of the Japanese islands? Many of the Japanese now teaching in schools and colleges may be compared to trees that have reached a certain stage of growth and have there been shut off from atmosphere and sun-light. They have acquired a finite measure of knowledge, and they apply themselves to distribute it circumspectly among their pupils, taking the utmost precautions that a margin shall always remain to themselves. The spirit of real progress can not live under such conditions. The teacher himself becomes a mere machine, barely maintaining his little stock-in-trade against diminution, and chiefly solicitous, not that it should be augmented, but lest it should be exhausted by reckless drafts on account of eager students. There are scores of men teaching foreign languages in Japanese schools who could not write so much as one original sentence correctly in the tongue they profess to inculcate. The poor fellows are not greatly to blame. They have no standard by which to gauge their own attainments, and like the courageous blunderers that write sign-boards for Tokyo tradespeople, they believe in their capacity because to doubt it would be to doubt those by whose aid they acquired it, and because, also, their means of subsistence, perhaps the support of wife and children, depends on holding their posts. Thus error and ignorance propagate themselves. It is true that Rome was not built in a day. Japan has done well, and there may be as much reason to preach patience to her as to urge expedition. But there are manifest blots on her educational system, and it is satisfactory to see that men like Dr. Kikuchi recognise them.

TWO CRIMINAL MEMBERS.

Messrs. Toshimitsu Tsurumatsu and Yokoyama Tomijiro took their places in the House of Representatives on Saturday, to the surprise of their fellow-members. It is said that no one addressed a syllable to them, and that the members subsequently agreed that should the two put in an appearance again, a motion for their expulsion must be made. These individuals are out on bail. They have been condemned by a court of first instance and by an appeal court for taking bribes, and they are awaiting the result of a final hearing by the Court of Cassation. Pending that conclusion, they retain their qualification as members of the Diet, but no one expected that they would have the assurance to take their seats. Mr. Toshimitsu used to be a very conspicuous figure in the House of Representatives before his evil practices left him in the lurch. He was supposed to be Mr. Hoshi Toru's chief lieutenant, but he had wit enough of his own to make a mark even without the reflection of his chief's favour.

KOREA.

Saturday, Dec. 7.

For some time there have been rumours about the disordered state of the Korean coinage, owing to the striking of "nickels" by all kinds of persons. It appears that the abuse has now assumed intolerable dimensions, and that the nickel coins have fallen to a discount of 50 or 60 per cent. as compared with copper. The Korean Government has accordingly given notice that the striking of nickels whether by Koreans or foreigners, outside official circles, is strictly interdicted. This notice is said to have been conveyed to the foreign representatives, who are about to hold a meeting for the purpose of considering the question. But it is not plain that foreigners have been involved in the practice. Previous intelligence indicated that the plethora of nickel coins was due to casting operations undertaken, first, by the mint; secondly, by the Court; thirdly, by local officials, and fourthly, by Korean private individuals. Perhaps the Chinese also have taken a hand in the game. In former days in Japan the Chinaman occasionally showed a disposition to turn his hand to that kind of enterprise.

The *Asahi Shimbun* has a telegram from Sôul saying that the British Representative has interceded with the Korean Government for the pardon of Mr. Pak Yong-ho and the other political malefactors, now refugees in Japan. The reasons actuating the British Government are said to be that the peace of the East is not promoted by the present state of affairs, and that the time has come when a more liberal and tolerant attitude should be adopted by Korea. We give the rumour for what it may be worth.

Monday, Dec. 9.

It appears from intelligence sent by correspondents in Sôul that one of the most serious difficulties in dealing with coinage abuses in Korea is the Emperor himself. If his Majesty grants permission, any one can convert his premises into a mint, and such permission has been frequently granted. One instance is quoted where the compound of a Christian church became a site for crucibles and dies. The question is will the Sovereign abandon a practice which replenishes his often exhausted purse. If not what is the use of making representations to the Foreign Chiefs de Mission? That is probably the view taken by the latter, for rumour says that when they held a meeting to consider the Korean Government's application, they put it aside unsettled after some deliberation. The Koreans had better control themselves before they claim an exercise of self-restraint on the part of the stranger within the gate. They are like the Chinese who, while growing vast crops of opium within the borders of their own country, clamour for a veto on the comparatively paltry supply of the foreign drug.

The meeting of Ministers did something however. It is said to have decided that land for building a Russian Consulate at Chemulpho should not be put up to auction, as is the usual practice with regard to foreign settlement lots, but should be handed over at its upset price.

It is reported from Sôul that the Russian Minister is insisting upon the construction of a line of telegraph from the capital to Kyong-heung in Ham-yong-do. The Minister claims that whatever objection may be raised by the Korean Government, the

Emperor has given his consent, which is final. The place in question is on the southern coast of Posiet Bay near the mouth of the Tumén River. It is easy to understand that Russia should desire to establish telegraphic communication in that direction. A line to Kyong-heung could be carried on without difficulty to Vladivostock, a comparatively short distance, and Sôul would then be brought into direct telegraphic communication not only with Russia but also with Nagasaki.

The whaling schooner *Choshu Maru* is reported to have sunk in the neighbourhood of Fusan. Three of the hands were lost.

Tuesday, Dec. 10.

It is expected that Mr. Hayashi, Japanese Representative in Sôul, will pay a visit to Tokyo at the close of the year. His departure from the Korean capital is spoken of as likely to take place about the 20th inst.

THE GERMAN OUTBURST.

We are now in possession of the criticisms evoked from the German press by Mr. Chamberlain's speech at Birmingham. They are very violent, it must be admitted, but it is noticeable that although Kitchener is called a "butcher" and other striking amenities of rhetoric are employed, the one thing which all these journals find to condemn is the system of concentration camps. The *Berliner Tageblatt* talks of "the barbarous herding of defenceless women and children in the shambles of the English concentration camps," and other newspapers also fix upon that feature of the war as specially reprehensible. Evidently the Germans labour under a total misapprehension about the methods England is pursuing towards the Boer women and children, and we fear that their disposition to believe what is unfavourable to England has blinded them effectually to the value of evidence. They take no notice whatever of the facts that the Boer Generals themselves have been invited to visit and inspect the concentration camps; that they have sent representatives to do so; that these found the management of the camps thoroughly satisfactory, and neither heard any complaint from the inmates nor themselves detected any ground of complaint; and finally that the bitterest cause of umbrage among the British in South Africa is that no such provision is made for English women and children deprived of sustenance by the war as is made for Boer women and children. The plain truth is that the measure taken to save the women and children of the Boers from starvation is probably one of the most merciful acts ever performed by any nation in warfare. It was dictated by a spirit of highly civilized clemency and it has been carried out without regard to cost in the most efficient and considerate manner possible. It is distinctly painful that such an undertaking should be made the basis of slanderous charges, and that the British should be accused of "brutal inhumanity" for making an unprecedented sacrifice on the altar of mercy. We can only continue to hope that "mehr licht" will come to the Germans from some source. They received pretty round abuse from English journals during the Franco-Prussian war, and they are retaliating now with compound interest. It is well to remember that they owed us something, and it is still better to look forward to the time when all these recriminations will be nothing more than faint memories.

THE TOKYO COMMERCIAL EXCHANGE.

For some time there have been rumours of defalcations in connexion with the *Tokyo Shôhû Torihiki-jo* (Commercial Exchange), and it now appears that they were well founded. Mr. Takeya, one of the managers of the Exchange, has converted a quantity of the securities placed in his charge and has employed the proceeds for his private purposes. The exact amount of the defalcations is not known publicly, but a hundred and forty or fifty thousand yen is spoken of. The securities in question are said to have consisted mainly of bonds lodged by brokers as security. Mr. Takeya is a son of Viscount Takeya, and his surety was Count Hirohashi, but the latter recently took the precaution of withdrawing from that position of responsibility. Mr. Shibusawa Kisaku is chief manager of the Exchange and Mr. Kooike is Mr. Takeya's colleague. There is some talk of holding these gentlemen responsible.

The defalcations due to dishonesty on the part of Mr. Takeya, a director of the Tokyo Commercial Exchange, are now said to aggregate only forty thousand yen. Rumour trebled the amount in the first instance. The *Fiji Shimpô* writes strongly on the frequency of such incidents in Japan. They are not unknown abroad, of course, but they are by no means as numerous as in Japan, and the public may be pardoned if from these repeated discoveries it infers the existence of many undiscovered cases also. Of Mr. Takeya's fellow-directors one, Mr. Shibusawa Kisaku, was absent in Europe when the misappropriation of funds took place, and the other, Mr. Konoike, was sick. It appears, however, that some uneasiness having been felt, the auditors were asked to examine accounts. They did so and reported everything correct, thus establishing their own incompetence.

THE KYOTO HOTEL AFFAIR.

The *Kobe Herald* contains the following:—

Before the matter of the recent Kyoto right of way dispute between the Oriental Hotel Company of Kobe and a Japanese Society slips from the public mind it may be well to say that later developments in the affair somewhat modify its aspect in so far as it might be viewed as an evidence of the existence of an anti-foreign spirit in Japan. The Japanese Government itself has taken action in the matter, we understand, and we do not think we are disclosing what should be withheld in stating that as a result the most generous offer possible was made to the Oriental Hotel company in regard to the road in dispute. It is unfortunate that official assistance of the kind was not forthcoming earlier. The Company having, however, decided that the money subscribed for the Kyoto enterprise should be refunded it is unlikely that the Oriental Hotel Company can avail themselves of the new offer. In justice to the Japanese side of the case, however, it is well that these facts be put on record, since it is probable that the whole matter will now lapse.

It is unnecessary to renew the discussion of this matter, but with regard to our contemporary's remark that "it is unfortunate that official assistance of the kind was not forthcoming before," we venture to affirm with absolute confidence that had the deadlock which the directors reported as fatal been brought to official attention as clearly as their final action was, a settlement could have been easily reached. Officials can scarcely be expected to move in such matters until they are approached, and it would scarcely have been reasonable to approach them until all other forms of remedy had been exhausted. We trust, however, that the enterprise will now be taken up again, for Kyoto is certainly in want of a good hotel, and the Osaka exhibition year, 1903, would be a most auspicious time to commence working.

THE LEPER REFUGE AT GOTEMBA.

Some years ago a charitable enterprise was undertaken which justly excited admiration. One of the French Fathers, working with materials and resources of the slenderest description but with abundant faith, established a leper refuge at Gotemba, and took upon himself the heroic duty of sharing the ostracism and perpetually ministering to the wants of men afflicted with one of the worst ills that flesh is heir to. When the news of this noble act of self-sacrificing mercy went abroad, it appealed strongly to the charitable spirit which the foreign residents of Japan have always displayed in the presence of suffering. Generous subscriptions flowed in, and the brave priest who had devoted his life to the work, was able to construct some kind of shelter for his most unhappy *protégés*; to provide them with the bare necessities of daily sustenance, and to acquire a small plot of land where vegetables might be raised to eke out their scanty fare. Since that time little has been heard of the Leper Refuge. There has not been any blowing of trumpets, any parade of good deeds. But the heroic effort has gone on quietly, sometimes making timid appeals for aid in times of special stress, but always distinguished by nobility of silent resolution. Now, as the year draws to its close, we hear again of this humane enterprise. Its property has been registered openly without recourse to the expedients which Japanese law renders necessary in the case of individual foreigners desiring to own property. Thus the precarious situation hitherto occupied by the work has been exchanged for one of stability. In announcing this fact M. Joseph Bertrand, who now ministers to the wants of the afflicted little community of Gotemba, issues a leaflet where we read that there are now 73 lepers in the Refuge, 55 men and 18 women. It is then a large undertaking; a heavy responsibility. "We venture to hope," writes the Reverend Father, "that those who have been so good as to aid us hitherto will continue to support our work, or rather their work, for it lives by their alms." More eloquent, however, than any language are the figures appended to M. Bertrand's report. The sum spent last year upon food for these 73 afflicted persons was 3,267 *yen*, an average of about 3.70 *yen* per head each month. On such fare as that miserable pittance can provide do they eke out their sad existence. Yet, out of the total expenditures on all accounts, amounting to 5,629 *yen*, only 486 *yen* is assured income, obtained from investments of capital. For all the rest the community of 73 persons have to trust to charity. That is bad enough but worse still is disclosed by the schedule of the Refuge's receipts for the year. We transcribe it:—

Gifts from the foreign residents of Yen.	
Japan	96
Gifts coming from abroad.....	4,723
Gifts from the lepers themselves	72
Interest paid by the bank.....	486

"Gifts from the foreign residents of Japan 96 *yen*." There is no mistake. We quote correctly. Here is this noble work carried on at our doors, and while charitable folks in Europe and America send 4,723 *yen* to assist, we, living in the country, contribute only 96 *yen*. M. Bertrand has made no appeal to us. He has not asked us to publish these facts; still less to institute the comparison we venture to make here. But it would be an outrage to the kindly spirit of this community and of the communities of Kobe, Nagasaki, Tokyo and Hakodate, to conceal the circumstances from them. We well remember that when the

Gotemba Refuge was started, the members of the Kobe Club put up a sum of 400 *yen*, and Yokohama too showed all its wonted generosity. Nothing is needed now but to recall the Refuge to our readers' memory, and to say that we shall be glad to receive, acknowledge, and forward any sums, however small, that may be sent to us in aid of the undertaking.

We agree with the *Japan Herald* that the Government of this country is to blame for not adopting efficient measures in the matter of leprosy. There ought to be a special and really well-equipped hospital, officially supported, where well-to-do lepers and paupers alike could receive suitable treatment. But we can not for a moment agree that because the Government fails to do its duty, private individuals should stand by callously and allow the unhappy lepers to perish miserably. That is not charity. Charity does not ask questions about other people's recognition of their responsibilities. It stretches out a helping hand at once. We have no doubt that our contemporary shares our view in these respects, and that, while not entertaining any idea of checking public generosity, it nevertheless thinks the occasion suitable for directing Japanese attention to a crying need. There we are entirely agreed. In the meanwhile, however, it is for kind-hearted people to do what they can, and not to stifle their charitable instincts by pleading the laches of others.

With reference to this subject, we have received the following letter:—"I wonder whether you know of two other leper hospitals, one in Kiushiu at Kumamoto, under Miss Riddell, with, if I remember rightly, between 40 and 50 patients; and a second at Meguro with some 40 to 45 patients. The latter hospital deserves fuller recognition. It is managed entirely by two Japanese, Mr. and Mrs. Otsuka, though there is a committee behind the scenes. Mr. and Mrs. Otsuka are Christians (Presbyterians or Congregationalists, I forget which) who have given their lives to this work and have now been engaged in it for about 8 years. I often visit it, as we have four *Seikō-kai* Christian patients there. I have the greatest admiration for Mr. and Mrs. Otsuka. The hospital is managed with great care. Every precaution is taken by Mr. and Mrs. Otsuka to prevent unnecessary contagion, and Dr. Kitazato's leper specialist visits the hospital twice a week; in fact it is now Dr. Kitazato's field for the study of leprosy. The very point to which you draw attention about the meagre pittance of the poor lepers at Gotemba is the weak spot, if I mistake not, in the Hospital. There is said to be overcrowding also. What we really want is an attempt to run an ideal hospital with strict attention to cleanliness and other hygienic principles and with the best medical advice."

It is to be hoped that the Government will soon undertake arrangements for the establishment of such a hospital, but in the meanwhile charitably disposed foreigners will not forget that the sufferings of the lepers call for relief, and that we may well make an effort to help those who have so nobly devoted their lives to this good work.

The question of the Gotemba Leper Hospital has been discussed by two correspondents of a local contemporary in a somewhat bitter strain. One writer says:—"Contrast the conduct of Father Testevuide, whose strenuous and continuous efforts on behalf of the lepers of Japan (I know the circumstances) were the cause of his death

in the Sanitarium at Hongkong—contrast, I say, the conduct of this noble priest with that of the thousands of Japanese with money to spare—merchants, bankers, shipowners and fundholders who have never subscribed one *sen* to alleviate the sufferings of Japan's lepers." The other writes:—"One can feel no other sentiment than admiration for the work M. Bertrand is doing, but when the cool neglect and complacency of the Japanese towards such enterprises is considered, it is hardly to be wondered at that foreigners are not as enthusiastic as they might be if the natives of this country did their share." If the writers of these letters have read what appeared in our last issue on the subject, they know now that they were mistaken in accusing the Japanese of complete insensibility to the sufferings of the lepers and failure to make any effort for their relief. The leper hospital at Meguro is administered by a Japanese gentleman and his wife, who have devoted their lives to this cause, just as Father Testevuide did and as Father Bertrand is doing, and the hospital is supported almost entirely by Japanese subscriptions. This is another example of misconceptions arising from the ignorance which the virtually isolated condition of the foreign community entails. It is quite true that no Japanese appear to have assisted the Gotemba Hospital. But have the Japanese been approached? We ourselves have spoken to only one Japanese on the subject, and he immediately subscribed. At all events, we can affirm from our own knowledge that to call the Japanese "stingy" in matters of charity, as one of the correspondents alluded to above calls them, is extremely unjust. The Japanese have not yet acquired the habit of giving large sums publicly for charitable purposes, but they are perpetually giving in a small way and without ostentation. Any one acquainted with the life of a Japanese family will support us in that assertion. There is as much of the milk of human kindness in this country as can be found anywhere, and we believe that the obligations of sentiment and mutual helpfulness are at least as fully recognised as they are in any part of the world. One of the best hospitals in Tokyo, the *Jikei Byōin*, is supported entirely by voluntary subscriptions, and the Red Cross Society with its income of over two million *yen* annually is a further proof that the epithet "stingy" can not be justly applied to the Japanese. But in truth their contributions to public charities are only a small fraction of what they give in private. Without, however, entering further into this general question, it will suffice to point to the Meguro Hospital—the *Ihai-in*—as an evidence that Japanese benevolence is not so apathetic as the above two correspondents suggest.

Another point may be briefly noticed in this context. "Sanitaire" and the journal to which he addresses himself, allege that lepers are going at large among the people of Yokohama, and that there is "a regular nest of them at the south end of the village of Izawa." Whether lepers should be segregated, whether leprosy is contagious, are questions about which medical science is not so confident now as it used to be. Apart from that, however, we remind the public that this same outcry was raised a few years ago with equal assurance, and that it elicited a declaration from medical authority in the sense that nothing could be sillier than to conclude that every one suffering from unsightly sores is a leper. The unfortunate persons, chiefly beggars, whose festering bodies evoked the protest on a former occa-

sion, were pronounced not to be lepers at all, and it is not improbable that "Sanitaire's" "regular nest at the south end of the village of Izawa" is a mare's nest so far as leprosy is concerned.

The long and short of this matter, we venture to think, is that true Charity does not wait for an example from others, nor find in the apparent shortcomings of its neighbours an excuse for its own ungenerous reserve.

We beg to acknowledge the receipt of the following sums for the Gotemba Leprosy Hospital:—

	Yen.

THE DIET.

Monday, Dec. 9.

Rumour says that the first measure submitted by the Government to the Diet will be a bill for transferring to the section of ordinary expenditures the outlays on account of works which, according to the *post-bellum* programme, should be carried on by means of domestic loans. This is the problem that has caused so much discussion among political parties; the only problem, indeed, that threatens to produce a serious collision between the *Seiyun-kai* and the Cabinet. It will be well to clear it out of the way at once.

The *Yomiuri Shimbun* gives an interesting analysis of the manner in which opinions are divided as to the financial questions now upon the tapis. The analysis takes a tabular form:—

Capital Funds.	Method of dealing with Chinese Indemnity.	State enterprises which ought to be conducted with the proceeds of loans.	No. of votes in the Lower House.
Government view— To be restored out of the Indemnity.	To be transferred to the general account.	To be carried out with the proceeds of general taxation.	—
<i>Seiyun-kai</i> — To be restored with the proceeds of taxation.	To be placed in a special account.	To be carried on by means of loans.	150
Progressists— Uncertain.	To be transferred to the general account.	To be carried on with proceeds of taxation.	73
Two or 3 Clubs— Not to be restored.	To be placed in a special account and used in connexion with the Eastern Question.	To be carried on by means of loans.	26
Imperialists— To be restored but from what source is uncertain.	To be carried to the general account.	To be carried on with the proceeds of taxation.	13

At a general meeting of parliamentary members of the *Seiyun-kai*, held on the 6th instant, Mr. Inouye Kakugoro proposed that a committee be appointed to consider the best means of honouring the memory of the late Mr. Hoshi Toru, to whose exertions the Party owed its present prosperous condition. The motion was carried *nem con*.

The two Houses of the Diet met on the 7th instant, and carried out the usual measures of organization. It is now officially announced that the opening ceremony will take place on Tuesday, the 10th instant.

The organization of the sections shows 160 members of the *Seiyun-kai*; 70 of the Progressists; 33 of the Two or Three Club; 14 of the Imperialists, and 23 of the Independents. Out of the 9 sections the *Seiyun-kai* have a decisive majority in 8.

After the Houses rose on the 7th instant, the ceremony of opening the new library of the Diet took place. Mr. Kataoka, President of the House of Representatives, announced the opening, and explained that what with exchanges and what with purchases, they had succeeded in bringing together about thirteen thousand volumes, to which number they hoped to make constant additions. The books did not relate to jurisprudence and politics only: they were of all kinds. Hereafter it was hoped that when volumes of special importance were acquired, translations of them would be made and distributed among the members. Subsequently the librarian read a report showing the contents of the library to be as follows:—

	Works.	Volumes.
Chinese and Japanese books ...	5,378	8,755
English and American	787	1,637
French	571	1,443
German	364	699
Various	28	80
Totals	6,928	12,614

Wednesday, Dec. 11.

The Emperor opened the Diet on the 10th instant at 10.40 a.m. His Majesty's speech was as follows:—

We hereby declare the Imperial Diet open.

Lords and Gentlemen of the House of Peers and the House of Representatives—It gives Us pleasure to state that Our relations with foreign Powers are on a footing of ever increasing friendship. Acting in co-operation with the other Powers in North China, We attained the objects that were in view, and the consequent arrangements are now on the verge of completion. We thank our civil and military officials for their zeal and the Houses of the Diet for their consent, by which means the prestige of the country was enhanced.

We have instructed Our Ministers to prepare and submit to you the Budget for next year and certain projects of law, and We look to you to exercise your functions of deliberation and consent with due regard to the national interests.

The ceremony was as usual of very brief duration and His Majesty left the House of Peers at 11.10 a.m. As the Imperial carriage was turning the corner of the Diet's enclosure, a man who up to that moment had been standing quietly in the crowd, suddenly threw off his coat and hat and sprang forward, crying "A petition, a petition!" He was at once seized by the police and the cortege passed without check. We understand that the petitioner proved to be Mr. Tanaka Shozo, who had been a member of the House of Representatives from the time of its opening until last month, when, on the eve of the 15th Session, he resigned his seat. It need scarcely be said that the subject of his petition was the sufferings of the peasants in the neighbourhood of the Ashiwo Copper Mine.

Thursday, Dec. 12.

The House of Representatives' answer to the Speech from the Throne was as follows:

Your Majesty's humble servants of the House of Representatives respectfully express their gratitude for Your Majesty's condescension in visiting the Diet to open its sixteenth session, and in addressing a gracious message to them. The complications in North China have happily been brought to a termination which could not have been reached without the exercise of Your Majesty's power. We venture to think that many problems still offer for solution in the East, and we trust that we shall be able, by careful exercise of our functions of deliberation and consent, to discharge our duty to the Empire, to give satisfac-

tion to Your Majesty and to show our appreciation of the trust reposed in us by the people.

The House of Peers met on the 11th instant, and having authorized the President to prepare a reply to the speech from the Throne, proceeded to elect a Chairman of Committee of the Whole House. The choice fell by a large majority upon Prince Tokugawa Iyesato. The members of the standing committees were then elected.

At 11.45 a.m. the President reported that he had repaired to the Palace and presented the House's reply to the Throne.

The House rose at noon.

The House of Representatives met at 1.05 p.m.

The President reported that he had conveyed to the Palace the House's reply to the speech from the Throne.

A question was presented with regard to a collision which was barely avoided between the railway carriage conveying the Emperor to the manoeuvres and another carriage on the Japan Railway Company's line. The question was presented by Mr. Kwanno Zenemon, whose son lost his life three years ago in the Hokigawa accident.

Mr. Sugita Teichi, of the *Seiyun-kai*, was chosen by a large majority to be chairman of Committee of the whole House.

The members of Standing Committees having been elected, the House rose.

The new enterprises proposed by the Government in the Budget for next year are, first, a steel factory at Kure; secondly, works at Yokohama and Kobe for establishing connexion between the maritime and land communications; and thirdly, the establishment of an office called *Shoko jimu-kan*, or Commercial and Industrial attaché, these officials to be despatched in the first instance to London, New York, Boston, Shanghai and Tientsin. There are other enterprises of a minor nature. The expenditures for the above are:—

The steel factory	6,340,093 yen
to be expended in four years.	
Yokohama and Kobe works	1,200,000 "
to be expended in three years.	
Commercial & Industrial Attachés	32,520 "

Friday, Dec. 13.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m. on the 12th instant.

The Prime Minister delivered a short address on the policy of the Government.

The Minister of State for Finance then read a statement relating to the Government's financial policy.

(These speeches will be published in our next issue.)

Mr. Nemoto asked what steps had been taken with regard to a sale of bonds in America; to whom had the business been entrusted; what was the amount; had the Japanese Minister in Washington given any assistance?

The Minister of Finance replied that he could not disclose these facts. At any rate the negotiations had not been carried beyond the preliminary stage.

Mr. Suzuki Manjuro asked to what University the proposed new medical college would be affiliated.

The Government Delegate replied simply that the college would be in Fukuoka.

Mr. Ozaki Yukio said that he understood that the distribution of the Chinese Indemnity was not yet settled, and he wished to know whether, under the circumstances, the uncertain amount coming to Japan could be properly included in next year's Budget.

He further inquired why the Government seemed to regard Chinese bonds as better security than Japanese bonds, and why the selling rate in London namely, 80 *yen* for a 100-*yen* bond—had been taken instead of the rate in Japan. Finally, he asked why, on this occasion, the Government had disregarded its often declared obligation of being guided by the terms of the law in compiling the Budget.

These questions did not elicit any detailed reply, according to our report.

This unprofitable process of questioning continued for some time, and the House finally passed to consider a Government Bill providing that funds for railway construction should be obtained from sources other than the sale of bonds. The Bill was handed to a special committee without any questions.

The next Bill was a Government measure for removing all restrictions upon emigration to China and Korea. This, too, was entrusted to a special Committee, as was also a Bill for amending the Registration Law in the sense of a slight increase in certain registration rates.

The House rose at 3.30 p.m.

THE STATE'S NEW ENTERPRISES.

There is a prospect of much discussion about the projected steel works at Kure. The record of the Wakamatsu Iron Foundry has made people timid. Originally the Foundry was set down in the estimates at a total cost of less than five million *yen*, but the expenditures ultimately aggregated nearly twenty millions. Will not the Kure steel factory show a similar result? That is one source of anxiety. Another is that after a large sum has been sunk, the possibility of manufacturing satisfactory plates is problematical. The *Kokumin Shinbun* seems to entertain both these apprehensions. It notes that although the Kure works are estimated to cost only 6,340,000 *yen*, they are just as likely to cost three or four times as much, and that, whatever they cost, the steel plates they turn out will not do for ship-building.

It appears to us that such views should be deprecated. The Government certainly made an egregiously erroneous calculation as to the outlay required for the Wakamatsu Foundry, but some part of the additional expense was due to enlargement of the original scheme, and, at any rate, the experience gained on that occasion is likely not to be repeated, but will serve rather to guarantee the country against similar blunders in the case of Kure. After all, Japan has to ask herself two questions: is it necessary that she should be self-supplying in these matters, and has the time come to make the attempt. If both queries are answered in the affirmative then the timidity shown by the *Kokumin Shinbun* and others is misplaced. The Wakamatsu Foundry is not likely to prove a paying concern from a purely financial point of view. What then? Was it started on the supposition that it would be a source of pecuniary gain to the State, or was it started with the idea that, though involving heavy outlays, its national importance justified them? The two things must be kept separate—purely economical considerations and the exigencies of the State. The future we anticipate for Wakamatsu is that it will ultimately pass into the hands of some private firm at a price which will render its profitable working possible. The national exchequer will have suffered but the national organization will have gained. The same argument applies to the projected Kure

Factory. Japan ought to have these things if she can afford them.

Again a project for the construction of barracks in Formosa has been introduced in the Budget. The estimated cost is 2,400,000 *yen*, spread over a term of 5 years. The House of Representatives rejected this item last year, but there is no second opinion as to the absolute necessity for such a work.

The third of the new enterprises is the building of a medical college in Fukuoka (Chikuzen) at an expense of 1,910,000 *yen*, the work to be extended over 8 years. About this there are many differences of opinion. First, there is local jealousy. If a new medical college is to be built, Kumamoto wants to have it and so does Nagasaki, while Sendai says that it does not object so long as an industrial and commercial college is given to it by way of restoring the balance of strength. At the same time, people who take no part in local interests, object to this establishment of an independent college away off in Kiushiu, and declare that such a step would be a complete departure from the educational programme hitherto pursued. If would be better, these objectors say, to spend the money upon perfecting the organization of the present universities in Tokyo and Kyoto.

The fourth project is to establish the "Third Commercial College" in Nagasaki. This involves an outlay of 360,000 *yen*, and is to be carried out in three years.

The fifth project is to give to Nagoya the "Fourth Industrial College" at an expense of 408,000 *yen*, the money to be spent in three years. This and the preceding project seem to be generally approved.

The project for extending the railway so as to bring the systems of land and sea communication into direct connexion at Yokohama and Kobe, does not provoke any opposition. It was Count Inouye that originally urged the necessity for this measure. The cost in Kobe's case is 1,200,000 *yen*, spread over 3 years. For Yokohama the immediate expense is 48,000 *yen* for the purchase of land.

LOOK AT HOME.

Englishmen have never resented Holland's sympathy with the Boers. They find it a perfectly natural sentiment. Indeed, we should all be very much surprised if the Dutch did not show themselves anxious to assist their brave kith and kin in South Africa, and ready to say hard things of the big Power against which they are struggling. In connexion with this "A Naval Officer from China" writes to *The Times*:—

Is it not time that England took some steps to square herself with Holland? English people have forgotten that for the last 30 years the Dutch have been trying to deprive the Achinese of Sumatra of their independence, and Holland simply owes her present position there to England having stopped the exportation of arms and ammunition from the Straits Settlements. Now, if we follow the lead of Holland, bring home the Sultan of Acheen in an English man-of-war, assist them to carry on their war of independence from London, and supply them with arms and our sympathy, in less than six months the Dutch will require every man they have, as well as their allies the Boers, to hold the island. Mr. Kruger and Mr. Leyds, having been so successful, should assist them in their plan of campaign.

All that sound plausible, but surely it would be wanton unfriendliness on England's part to act as "A Naval Officer" suggests? The Achinese are nothing to us, whereas the Boers are bone of the Dutchmen's bones and flesh of their flesh.

MR. TANAKA SHOZO.

Mr. Tanaka Shozo's attempt to present a petition to the Emperor caused some disturbance, chiefly owing to the fact that the sergeant of the cavalry escort, wheeling his horse too suddenly in the direction of the petitioner, threw the animal down and thus added greatly to the commotion. Tanaka himself is said to have been quite collected, but those that have witnessed his demeanour in the House at moments of interest will find difficulty in crediting that report. He was allowed by the police to ride to the station in his own *jinrikisha*, and a separate room having been placed at his disposal, he was provided with luncheon. The magisterial examination took place subsequently. Mr. Tanaka explained simply that having exhausted every ordinary means of obtaining redress for the sufferers by the Ashiwo trouble, he had concluded that no resource remained except a direct petition to the Sovereign. The investigation concluded at half-past three, and Mr. Tanaka was then suffered to return home under his own recognisances to appear when summoned.

A discussion has arisen as to whether the Public Procurator should proceed with the case. It is pointed out that the object of the law is to protect the Sovereign against rudeness of every description, but that Tanaka can not possibly be suspected of any discourteous or disloyal intention. Some are disposed to conclude that he was not in full possession of his reasoning faculties when he took such a step, but there does not appear to be valid ground for suspecting that he suffers from anything except a very excitable temper. For our own part, it seems to us that the law can not properly make any complete discrimination in Tanaka's favour. If the sincerity of a man's motives and his general integrity of character be admitted as justification for thrusting petitions into the Sovereign's hands as his Majesty passes through the streets, such a manoeuvre would become too common.

It has been decided that criminal proceedings shall not be taken against Mr. Tanaka Shozo, but that, inasmuch as the repetition of such conduct as his would be reprehensible, a law shall be enacted for dealing with any cases of the kind. The wisdom of the former decision is questionable. Existing laws are sufficiently clear on the subject, and ought to be applied without reserve, the Emperor's prerogative of pardon being employed in the last resort if the circumstances of the case seem to warrant special clemency.

Tokyo journals publish Mr. Tanaka's memorial to the Emperor. It is simply a repetition of his statements frequently made in the Diet as to the sufferings caused by the discharge of the poison from the Ashiwo Mine into the Watarase River. He claims that 138 districts have suffered from this cause, and that the land tax has been remitted in the case of 68, the resulting loss to the Treasury being from 170,000 to 180,000 *yen* annually. As to the total loss inflicted on the agricultural class, it is almost beyond computation. Lives also have been destroyed, and people are now dying from the effects of the poison. Mr. Tanaka disclaims all intention of attacking Mr. Furukawa, the owner of the mine, but he declares that his ten years of incessant agitation in the House of Representatives having failed to produce any tangible effect, he saw no hope except to appeal direct to the Sovereign.

MARQUIS ITO.

Rumour continues to be busy with Marquis Ito's trip to St. Petersburg. The newsmongers, when they last penned paragraphs and reports for Tokyo journals, did not know that Marquis Ito had already left the Russian capital. No importance is to be attached to their comments and inferences except as offering a clue to their own mood. They speak, among other things, of advice supposed to have been given by the Russian Minister of Finance to Marquis Ito to the effect that Japan would do well to go to France for a loan, and that, in doing so, she might count on Russia's assistance, and they represent Marquis Ito as replying that, according to his own individual view, that would be a wise course. Do these concoctors of tales really imagine that Marquis Ito's perspicacity is so defective? Do they really think that he would follow the pernicious example of Chinese statesmen by imparting a political complexion to his country's financial operations? If they do, they can scarcely be said to be well equipped for the role of intelligent onlookers.

Marquis Ito arrived in Berlin on the 7th instant, and was met at the station by Mr. and Mrs. Katsu Inouye and by various high German officials. The Marquis will spend some time in Berlin, proceed thence to Paris, and finally cross to England. It is expected that he will return to Japan about the beginning of March. He and the members of his party are reported to be in excellent health.

Marquis Ito has reached Berlin and had an interview with the German Minister of Foreign Affairs. There was to be an evening party at the Japanese Legation on the 9th to enable the Marquis to meet the leaders of Berlin Society.

THE JAPANESE IN AUSTRALIA.

In commenting upon the attitude of the Australians towards the question of Asiatic immigration, the *Japan Times* quotes the following statement made by Mr. Deakin, Attorney General:—

"I say that the Japanese require to be absolutely excluded. I contend that the Japanese require to be excluded because of their high abilities. I quite agree with the honourable member for Moreton that the Japanese are most dangerous, because they most nearly approach us, and would, therefore, be our most formidable competitors. It is not the bad qualities, but the good qualities of these alien races that make them dangerous to us. It is their inexhaustible energy, the power of applying themselves to new tasks, their endurance, and low standard of living that make them such competitors."

That is certainly very interesting. Suppose that the Japanese were to adopt a similar line and were to say:—"We contend that Europeans and Americans required to be absolutely excluded. We contend that they require to be excluded because of their high abilities. It is not the bad qualities but the good qualities of these alien races that make them dangerous to us. It is their inexhaustible energy, their power of applying themselves to new tasks, their endurance, their command of cheap capital, their experience so much superior to ours, the credit they enjoy abroad, their masterfulness, the support they receive from their Governments—these are the things that make them such formidable competitors." Suppose that the Japanese were to say these things at the expiration of the term for which the present treaties run, and were to follow up the pronouncement by turning us all out, bag and baggage, could we question the logic of their reasoning

without impugning that of the Australians? In our opinion it is not the desire of the Australians to discriminate specially against the Japanese. We have not before us at present the debate from which the above extract from Mr. Deakin's speech is taken by our Tokyo contemporary, but it seems to us plain that the Attorney-General was combatting the very sentiment which the *Japan Times* believes to be conspicuous by its absence in Australia, namely the sentiment that there should be discrimination, not against Japanese, but in their favour as compared with other Asiatics. People in Australia, or at any rate many people, feel that a general rule applicable to all Asiatics is not fair to the Japanese who have qualified for very different treatment. The Attorney General—who ought, we should think, to encourage and approve that feeling—applies himself to condemn it, and for that purpose takes the cowardly ground that the Japanese have too many high qualities to be admitted to free competition. When a section of the Japanese people took a similar line against the unrestricted admission of foreigners to this country a few years ago, some very severe things were said of them. They were called poltroons, and were told that their unfitness for competition and the hopelessness of their attempts to cut a great figure in the world were fully proved by their craven conservatism. May they not now reply *de te fabula narratur*.

THE BUDGET.

The following is a precis of the Budget submitted to the House of Representatives on the 10th instant:—

	Yen.
I.—Total Ordinary Revenue.....	224,755,826
Taxes	153,430,541
1. Land tax.....	46,845,971
2. Sake tax	63,805,207
3. Customs duty	17,045,611
4. Other taxes.....	25,733,752
Stamps	14,304,951
Public Domain	59,775,764
1. Post and Telegraphs.....	25,856,730
2. Tobacco Leaf Monopoly	11,717,579
3. Railways.....	7,786,022
4. Other items.....	5,415,433
Miscellaneous	6,244,570
II.—Extraordinary Revenue.....	53,596,616
Sale of 4 per cent. Chinese Bonds ..	38,059,200
Chinese Indemnity of 1895	8,065,856
Miscellaneous	7,471,560
I. and II.—Total Revenue.....	278,352,442
I.—Ordinary Expenditure	177,641,412
Civil List	3,000,000
Foreign Department	2,284,201
Home Department.....	10,604,286
Financial Department	61,788,044
1. Public Debt	43,215,300
Interest, etc.....	31,464,910
Sinking fund	11,750,390
2. Other items.....	18,572,744
Army Department	38,481,709
Navy Department.....	21,388,546
Justice Department.....	10,950,815
Educational Department	4,855,041
Agriculture and Commerce Department ..	3,008,306
Communications Department	21,190,460
II.—Extraordinary Expenditure	98,109,782
Chinese Affairs	2,500,000
Restoration of Naval Maintenance ..	38,059,196
Fund, &c.....	13,619,798
Railway Construction and Telephone ..	43,930,788
Construction	
NOTE.—This amount should be defrayed by loan, but this year it is taken from ordinary revenue.	
Defence Works, Rivers and Harbours ..	
and other Public Works, Navigation ..	
subsidies, &c.	
I. and II.—Total Expenditure	275,751,194
Difference of Revenue and Expenditure in surplus.....	2,601,248

FORMOSA.

Baron Kodama reached Shimonoseki on his way back from Formosa on the 8th instant. From conversation held with him by a representative of the *Asahi Shimbun* it appears that he thinks the time has come to devote special attention to the development of Formosa's resources. Hitherto official attention has been engrossed mainly with the task of restoring order. It can not be said that complete success has been attained, or that no more outbreaks need be apprehended, but, on the whole, the island is fairly peaceful and its administrators may now think of other matters. Sugar refining seems to present itself to the Governor-General as the most promising source of wealth. He speaks of establishing a bureau for that purpose and carrying on the work vigorously.

It appears to us that there is a tendency to treat Formosa as Hokkaido was treated in former years. Good results were certainly obtained in the northern island, but at immense cost and though no other plan was possible under the circumstances of the time, the public would certainly regard the Formosan outlook with more confidence were officialdom less prominent. If the business of sugar-refining promises to be so profitable, can not private enterprise be trusted to undertake it? The Governor-General and Dr. Goto have access to sources of information which invest their judgment with special value, but we venture to hope that Formosa is not to furnish a spectacle such as Yezo furnished in 1880.

Lieut.-General Baron Kodama, Governor-General of Formosa, is expected to arrive at Shimbashi at 11 a.m. on Wednesday (to-day). While in Kobe, the General is reported to have said that he will remain in Tokyo until about April next and that the railway between Wanri and Shinyeisho will be opened for traffic on Dec. 15th. He added that the recent rising of insurgents in southern Formosa was due to bad crops.

THE JINRIKISHA COOLIE IN HONGKONG.

Hongkong is suffering so severely from the difficulty of procuring and retaining men in the capacity of *jinrikisha*-drawers and chair-bearers, that a committee was recently appointed by the Governor to inquire into the matter. The committee recommended registration and the enactment of a law making it penal for a coolie to ply without registration or an employer to ride in an unregistered vehicle. Each applicant for registration is to be photographed, and it is hoped that the police will thus be able to weed out evil characters.

Evidently the same cause of trouble is operative in Hongkong as in Japan: a public *jinrikisha* earns so much that men become discontented in private employ. The committee found that in one case two *jinrikisha*-men earned between them from 60 to 80 dollars a month. It is proposed, therefore, to fix a scale of charges; at a rate of two, three and five *sen* for five, ten, and fifteen minutes, respectively, together with a schedule of distance fares. The Hongkong *Daily Press* speaks of the possibility of a general strike of *jinrikisha* and chair coolies, which event would place the colony in an ugly position.

It is understood that various brewery companies such as the Asahi, Ebiso, Sapporo, etc., will bring a petition before the Diet asking for a diminution in the tax on beer, which came into force on the 1st of October.

DEATH OF MR. KIMURA.

The death is announced of Mr. Kimura Kaishi, who was Governor of the Navy under the Tokugawa Government. Mr. Kimura was a very great man in his time. It was he that took Mr. Fukuzawa Yukichi to America as his servant, at the earnest request of the latter. He published, some years ago, a "History of Thirty Years" for which the late Mr. Fukuzawa wrote a preface. Mr. Kimura commanded the *Kanrin Maru*, which escorted the first Japanese embassy to America, and Mr. Katsu Awa, afterwards Count Katsu, was second in command. Mr. Kimura died on the 9th instant at the age of 72.

FIRES IN TOKYO AND ELSEWHERE.

At 10 p.m. on the 6th instant, during a strong wind, fire broke out in the German Language School (Doitsu Kiyokai-gakko) in Nishiohawa-machi, Tokyo, and the whole school, as well as the godown containing books, were reduced to ruins. Several adjoining houses were pulled down to prevent the flames from spreading, but the wind rendered that attempt abortive, and the conflagration could not be controlled for an hour and a half, by which time many houses had been destroyed. The school was insured with the Tokyo Fire Insurance Company.

The recent fire at Matsuyama in Iyo is said to have caused great distress, most of the persons burned out having been in the humblest circumstances.

Fires are pretty general now-a-days. Collating the telegrams from various places reported in the vernacular press on Sunday we may mention that an outbreak occurred in Fuse-mura, Chiba prefecture, resulting in the destruction of 237 houses; that a shed in the compound of the Saseho Admiralty was burnt on the 6th; that 50 houses were reduced to ashes in Awayamashiku, Ebaraki prefecture, on the 7th; that a forest fire occurred on the Imperial estates at Amishiro, Shizuoka prefecture, on the 5th with the result that about 50 *cho* were turned into a desert; and that fire destroyed 30 houses in Odawaramura, Fukushima prefecture.

Fire broke out on the evening of Dec. 8th about 10 o'clock in the house occupied by Mr. E. da Silva, No. 23 Bluff. Two minutes with buckets put out the incipient blaze and the damage was slight. The cause appears to have been an overheated stove-pipe, and Mr. Morgin, Satsumacho Superintendent, remarks that the agent of whatever insurance company may be interested in the building would do well to inspect the house. If the stove-pipe is left as it is, he says, another fire may be expected ere long, for the pipe almost touches the wood surrounding it.

The Emperor has presented the sum of yen 250 to the sufferers from the recent fire at Natori in Ehime prefecture.

Shortly before 6 a.m. on Thursday a fire occurred in a shed at No. 137, Ogimachi, Yokohama, owned by one Tsukada Hyosaku. The shed and four adjoining houses were destroyed. The fire originated among live ashes left in the barn.

Intelligence from Kobe, supplementing the *Japan Mail's* private telegram, says that fire broke out in the Kyosuishu, a match factory at Matsubara, Hyogo, on the morning of Dec. 11th and the whole of the premises were destroyed together with properties contained therein. Three female operatives were burnt to death and several others received injuries. The cause of the disaster is said to be due to friction of match boxes. The destroyed factory was a large concern employing over 300 operatives, men and women.

NOTES ON CURRENT EVENTS.

Intelligence from Nagasaki is to the effect that on the night of the 6th instant a party of 10 French marines came into collision with about 15 Japanese, and for a moment the fracas threatened to assume serious dimensions. Happily order was restored before anything grave had occurred. Nagasaki has been earning a most unenviable reputation of late.

This Company has closed its doors, owing to continued difficulty in disposing of its cotton yarns. It is a small affair with a capital of only 100,000 yen. There is talk of its rehabilitation.

The celebrated actor Onoye Kikugoro, who ranks next to Danjuro on the Japanese stage and has for many years delighted audiences in all the great cities, has had a stroke of paralysis and will never be able to act again. Kikugoro was a very free liver, and his love of *sake* seems to have accentuated the strain of his professional duties.

The retiring Chinese Representative, Mr. Li, and his successor, Mr. Tsai, were received in audience by the Emperor on the 7th instant, the former to say farewell and the latter to present his credentials.

A curious point has been raised in the correspondence columns of a local contemporary. "Shank's Mare" having written to complain that, by keeping the left of the road, he nearly collided with a *betto* who was leading a horse towards him on the same side, and that a policeman, on being appealed to, decided in favour of the *betto*, "Jason" replies to the effect that the *betto* was right, for the rule is that persons meeting a led horse must pass on the side of the man leading it. "Shank's Mare" declines to accept that correction, his contention being that the rule in Japan is "all traffic to the left." Has it occurred to "Shank's Mare" or to "Jason" that a Japanese *betto* or carter walks, in the great majority of cases, on the off-side of the animal he is leading or driving, in other words, on the right side? Consequently, if the *betto* or driver desires to keep the traffic on his own side, he must bear to the left. It would seem, then, that "Shank's Mare" is right whether he bases his case on the "traffic-left" rule of the road, or on the "led-animal" rule as interpreted by "Jason."

Tokyo newspapers report that the efforts of an Italian commissioner to induce the Japanese to send articles to the exhibition of art furniture which is to take place in Rome next year, have not been successful. The cause of failure is said to be a proposal that articles prepared in Japan should be inspected by the commissioner before leaving this country, and should be accepted or rejected according to his verdict. Naturally Japanese art-artizans are unwilling to take the risk of appealing to such a very small public. Indeed it is scarcely comprehensible that such a restriction should be imposed, for its deterrent effects must be quite obvious.

We regret to announce the death of Mr. Komai Jukaku, President of the Tokyo Commercial School, which took place at his residence in Tokyo on the night of the 8th instant. Mr. Komai had long been a sufferer from asthma, but the malady which finally proved fatal was inflammation of the lungs.

A collision occurred on the 9th instant at 9 a.m. between a German steamer—the

transliterated name is "Bamberg"—and a Japanese sailing vessel, the *Ohama Maru*, of 40 tons burden. The latter was sunk, but her crew were rescued by a steam launch from the shore. The *Asahi Shimbun* alleges that the German steamer continued her voyage without any attempt to save life.

His Excellency the Belgian Minister, who leaves for Europe in a few days, will be received in farewell audience by the Emperor on the 13th instant, and will subsequently have the honour of luncheon with His Majesty. We are glad to be able to say that Baron d'Anethan is going on leave only, and that his return to Japan, accompanied by Baroness d'Anethan, may be expected in a few months.

Mr. George De Man has arrived to serve as Secretary of the Belgian Legation; Mr. Mechlenburg, as Student Interpreter at the German Legation, and Lieut.-Commander Charles C. Marsh as Naval Attaché at the United States Legation.

It is well suggested that the introduction of automatic telephone exchanges will probably cause an appreciable reduction of bad language. A telephone is a terrible incentive to ill-temper. The sender of a message and the operator alike lose their personality for the moment, and becoming to each other mere voices, are relieved from the restraints which the visible presence of a *vis-à-vis* unconsciously imposes. Women are much quicker than men in the capacity of telephone operators and therefore furnish correspondingly small ground for vituperation; but even were they less nimble-willed and obliging, the thought of their sex would contribute to make things work smoothly. If now the telephone exchange can be placed in complete charge of a mere machine, there will really be nothing to swear at, and as *The Electrical Review* justly remarks, public morality will be improved.

BRITISH SQUADRON IN HARBOUR.

There are now at the Yokohama anchorage three of the finest ships that the British Navy can boast of. They consist of two first-class battleships and one first-class cruiser. The *Albion*, (which carries the flag of Rear-Admiral Harry T. Grenfell, C.M.G.) and the *Ocean* are sister ships, designed to fight in the battle-line and, with the exception, perhaps, of the newest Japanese vessels, are the most powerful of their kind in the world. Each carries four 12-in. guns, two fore and two aft, with twelve 6-in. pieces on spigons fore and aft and on the broadside. Against this the Japanese ships have the same armament with two additional 6-in. guns, and seem to have at the same time better armour protection for their gun positions. Yet the *Albion* and *Ocean* are fine fighting ships, though the former looked somewhat disreputable as she came in, with black funnels and dirty white on her water line. The *Argonaut* is of quite a different type. She belongs to the *Diadem* class which, as many think, is a distinct improvement upon the *Powerfuls*. This style of ship has a very high freeboard with a low poop and instead of the one 9.2-in. gun carried forward and aft by the earlier cruisers, has four 6-in. quick firers so placed, her complete main battery being thus sixteen pieces of that calibre. Of course, like the ships of her class the *Argonaut* is practically unprotected against heavy gun-fire, but, though comparisons may be odious, it is not out of place to state that in the *Rossia*, a ship of similar type, gun protection has been equally ignored.

THE BOOKSHELF.

"Catalogue of the Morse Collection of Japan Pottery"; by EDWARD S. MORSE, Keeper of the Japanese Pottery.

BOSTON is fortunate in being the place of residence of many lovers of art whose public spirit induces them to make large contributions to the furnishing and support of a museum, which has thus become one of the richest in the world so far as Oriental works of art are concerned. The museum possesses Mr. E. Fenollosa's incomparable collection of Japanese pictures and prints and also Mr. E. Morse's collection of Japanese porcelain and pottery. It is of this latter that a magnificent catalogue has now been published by Mr. Morse himself under the auspices of the museum. Several of the finest specimens in the collection were presented by Dr. Bigelow, who has also enriched the museum with a grand series of Japanese lacquers and miscellaneous objects. Further, unless we are wrongly informed, the publication of this catalogue, a most costly undertaking, owes much to Dr. Bigelow's munificence, though his name is not referred to in that sense by Mr. Morse, for reasons which those acquainted with Dr. Bigelow's dislike of ostentation in every form will readily appreciate.

The catalogue is a work of monumental industry. It contains no less than 1,545 potters' marks, from which fact alone the nature of Mr. Morse's labours may be conceived. It is safe to say that no ceramic ware of Japan has failed to receive minute study from him. Even the commonest pottery does not escape notice, and the wares dear to the *chujin* though almost incomprehensible to persons of ordinary intelligence and normal tastes, are not only abundantly represented in the collection, but also honoured with a degree of attention which the enthusiastic author's thoroughness, rather than their own merit, has secured for them. There are 68 photogravure plates. None of them is coloured, a fact which certainly constitutes a drawback. On the other hand, the photographer has done his work so admirably that a very clear idea of the wares represented is conveyed in the majority of cases. With this catalogue in his hands a collector can be almost certain of identifying any ware deserving of notice, and of deciphering its marks. We can not but express surprise and admiration that a man living in Boston and having spent only a brief period in Japan, should have succeeded in amassing such a quantity of accurate information as Mr. Morse has embodied in this work. Of course in dealing with a subject so extensive as that of Japanese pottery, where, if non-artistic wares be included as well as artistic, the range of varieties is wearisomely large, it is inevitable that some debateable statements should be made. Mr. Morse is well aware of this. In his "Final Notes" he says:—"This catalogue is the result of continuous labour for 20 years. No pains have been spared to secure accuracy, yet with the last page I can only express regret that I can not re-write the whole work. Errors in attribution in the interpretation of signatures and in the estimates of age must inevitably exist, and the frankest criticism is solicited." Such a statement disarms all desire to criticise. But in truth there are few if any persons in the world competent to sit in judgment on Mr. Morse's work. We could wish, for our own part, that Mr. Ninagawa Noritane had been less *en evidence*, for those that had an opportunity of sitting long at Mr. Ninagawa's feet, did not permanently preserve their reverence

for his infallibility, and Mr. Morse's opinions seem to us much more accurate and weighty. But that is a small matter. It scarcely constitutes a blemish. The volume takes its place at once as a text book, and will always remain so. Between it and anything previously written the interval is enormous. It will not serve to convey to the general reader a clear idea of the history of the ceramic arts' development in Japan, but to collectors it will be of the greatest possible assistance. We are not aware whether any copies have been sent to Japan for sale, but whether they have or not we recommend all genuine lovers of Japanese pottery and porcelain to provide themselves with the volume as quickly as possible.

SAISHI.

The word I translate here as "worship," is expressed by the Chinese character 祭, used for the Japanese word "Matsuri." According to Williams this character is composed of the Radical "Shi" "to declare," with the contracted characters "Shu" "hand" and "Niku" "flesh," and means "sacrifice," and the character 祀 also read "Matsuri," "to sacrifice to the departed." The paper I now present to you, is a further translation from the Political Economy of Dazai Jun, who lived 220 years ago.

Worship is the worshipping of outside Gods 外神 and Ancestors 先祖ヲ祭ル. It is written in the Saden that the most important factors of a country are its Worship 祀 and Fighting Men 戎. If there are Gods 祀 there must be worship, and if there are fighting men there must be soldiers. These two are of the utmost importance to a country.

The Emperor worships Heaven, and Earth, the famous Mountains and Rivers of the earth and the Gods of the Soil and Harvest. Princes worship the Gods of the Soil and Harvest, and the famous Rivers and Mountains of the Country. Great Men worship the five "Shi" 祀 (Gods).

The Gods 神 of the land are the Sha 社. The Gods of the Harvest 祀 are those 神 of the five cereals. The five Shi 祀 are the Gods of the House 戸, of the Furnace 竈, of the Gate 門, of the Roads 行, and of the Inner Court of the House 中庭.

Even the Emperor must worship reverently; how much more so the Princes and those below them.

All acts in Heaven and Earth are either those of man or of the Gods. Man's work is done by his own strength, but its success or non-success depends upon the help of the Gods. For instance, after the farmer has put forth his best strength in cultivating, whether the grain will ripen, whether the year will be fertile, lies with heaven to do as it pleases. It is because of this that the Former Kings considered the worship of the Gods of the greatest importance.

During the year many acts of worship are offered, prayers to repay the kindness of the Gods and prayers for the Country and for the ease of the People. Though our country is called the country of the Gods, Ceremonial Worship has been very much neglected. Foremost, no Shrines have been erected to the Gods of the Soil and Harvest.

In the Middle Kingdom the Sha, or shrine, of the Emperor is called the Great Shrine (Dai Sha) and that of the Princes, the Shrine of the Country. The Emperor and Princes must themselves pay worship.

Everywhere in small villages of even 25 houses Sha are built, where the villagers worship twice a year, on the day of the Shrine (Shanichi), once in the middle of spring and once in the middle of autumn. The Shrine Day is one of good fortune, standing near to or after the spring and autumn equinoxes.

The soil produces all things and nourishes mankind, and in consequence of this are our people now happily alive. Of the five powers 五行

the Good 德 of the soil is the widest reaching, and to repay this good the Gods of the Soil are worshipped in some countries, but not in Japan. This is a mistake. In China travellers worship the Sodo 土道 on leaving the gate; So is the God of the Roads. On the departure of troops the Gods of War and Horses are worshipped. The God of War is called Shiyu (after a rebel 2637 B.C.). The God of Horses is the star called Tenshi (Heavenly Horses).

These acts of worship are most important to man. In addition to the above there are other less important Gods. Reverence to the Gods and their worship is practised much more than in our own country.

In Japan the Emperor and the Princes do not personally conduct worship. Priests and Priestesses are deputed to act for them; they do not purify themselves; this is very irreverent. All ceremonies and matters relating to prayers and supplications are deputed to Bozu, Kannushi, Kannagi and Yamabushi, those in power never officiating. In worshipping Gods they ought to purify themselves, wash the hair and bathe, change the clothing and stop all impurity. Unless true reverence is practised the Gods will not receive the worship. This is what is known as the reverence of Jozai. "Jozai" means acting reverently, as if in the actual presence of the Gods.

The Kami are Heaven, Earth, Mountains, Rivers, Soil, Grain, and the five Ki 祀. The Shin 神 of heaven, and Shi 祀 of earth, distinguish between heaven and earth, but Kami is the common name.

The spiritual soul 神靈 of the dead is called Ki 鬼 and this when joined together with Shin 神 makes the word soul Kishin 鬼神.

In worshipping Kishin the Ceremonial Law must be observed very carefully so as to distinguish which Kishin ought to be worshipped and which not. Those worthy of worship are the ones chosen by the Sages.

The Emperor (Tenshi), being the Lord of the Earth, worships all the Kishin of the earth, which have been chosen for worship, and these are called Shiten 祀典 (Lawful Worship). The Princes and those lower worship only the Kishin specified by the Emperor. These are called Meshi 命祀 (Specified Gods). None but the Meshi ought to be worshipped by the people.

In some small places people have merit and virtue, and become beloved. Then when permission is granted by the Government, a shrine may be erected and their Reiki 靈鬼 (soul) worshipped. This is one of the Meshi.

Other Kishin are worshipped without reason; this is called Inshi 淫祀 (irregular worship). The Record of Ceremonies states that there is no good fortune in Inshi. People are so stupid they worship anything the least wonderful. Sometimes the Government steps in, breaks the shrine, and prohibits the worship of irregular gods. This is one of the duties of a Government. In the Kara dynasty Tenjinkatsu prohibited Inshi and destroyed over 300 shrines. This was called Yeiu (Great Deed). From ancient times in Japan Inshi have never been prohibited; therefore the people, as a matter of course, the Samurai Princes and those above them have unknowingly worshipped countless unmeaning Gods. There are the Hachiman and Ise shrines which are worshipped by the Emperor, but which ought not to be worshipped by the Daimyo and those of lower rank, but the people worship these in impure houses and so defile honourable Gods. Kasuga is the ancestral God of the Fujiwara family, and unless a person is a Fujiwara he ought not to worship him. Tenmangu is the God of the Kanshojo, and unless one is a Sugawara one ought not to worship him. Worship of this kind is all Inshi or Impure. Impure Worship is defilement to a God. Koshi says:—"It is base flattery to worship a soul which is not one's own ancestor." He said this because Kison worshipped Mount Tai, and Koshi reviled him for thus worshipping a strange God. There is no good fortune in worshipping Inshi. No good comes from it. If a God is defiled it is but natural to expect punishment and if it does not come immediately it will indeed be fortunate for

the offender. Foxes are worshipped as Inari (the meaning of the two characters used in writing this word are "Ine" "growing rice" and "Ni" of "nimotsu" which means to carry). Snake are worshipped as Ugakami. These of all the false Gods are the most foolish. Man is the soul of all things; of all things there is nothing nobler than man, but the ennobling of foxes and reverencing of snakes is just the same as a prince of men honouring his slaves. It is a reversal of the right order of things.

In China the star Hakkoto is worshipped, but the Emperor does not think it right for the lower classes to worship it, and they are prohibited from so doing, and also from worshipping false Gods generally; those who disobey are punished. This law has been in force through different dynasties. To prevent people from worshipping false Gods is most excellent government. In modern times it is said that Giko of Mito prohibited false Gods in his province and destroyed many shrines. He may therefore be called a famous man with a knowledge of Government.

All Gods have rank. The Tentei (Emperor of Heaven) of course is the highest of all. The Sun, Moon and Stars are all Gods of heaven and are above rank. All Gods of the earth come below the Tenshi (Emperor) and their rank can therefore be classified.

It is said in The Law of the Former Kings that the five Peaks ranked the same as the three Dukes 公, and the four Rivers as the several Princes 侯. The five Peaks were Totai, Nanko, Seikua, Hakkoku and Chusu. These are the five most noble mountains of the earth and ranked with the three Dukes. The four Rivers are Ko, Ka, Wai, and Sai. Of rivers these are the four most noble, and ranked with the different princes. The Ko (Princes) were one rank below the Ko (Dukes). It can thus be seen that in addition to the five Peaks and four Rivers there were no Gods equal to the three Dukes and several Princes. Thus rank is no light thing.

Even in Japan in former times scarcely any shrines were given over the third rank by the Emperor, because of the importance of rank. In these days, however, there are such a number of small shrines and Inari of the first rank, that these low class Gods cannot be counted. During the Dynasties of Shirakawa and Yoshida many ranks were given to the priests and priestesses; therefore one seldom sees a shrine but it has the first rank. This is a great shame and a departure from the old law of Japan. Even though it may not be a false God it is not right that it should have more than the third rank. Much more should the first rank not be given to foxes and snakes which are worshipped. In the ancient rites of Japan it was very seldom that of the three Dukes one was advanced during life to the first rank. But now all kinds of low Gods are ranked as first, so for really noble Gods what rank is there they may not go to? This happens because none consider the ancient rites. This is truly degradation of rank.

The Tenshi and Princes worship and pray for a good year for the people, and to drive away calamity. Should it not rain for some time there is a prayer for rain, if too much rain then they pray for it to cease. At the present time the heaviest affliction of the eastern capital is fire. Drought and high wind cause fires. Frequently worship is performed for rain to fall and wind to cease, and thus avert this calamity. It cannot be said that this is without result.

The Sages used to reverence the Gods of earth and heaven, and pray for the good fortune of the country and people, and to drive away calamity. To the ordinary mind this may appear as foolishness. But after man has exerted all his strength there is nothing left but to beseech the Gods of heaven and earth. Gods are wise and honest, and though worship may seem like childish play the Gods are touched and respond. This is a difficult thing to understand about the Kishin.

To fear Heaven and grieve for man is a prince's part. It is too difficult a thing for the ordinary student to understand. In all worship there must be a head. All important worship the Emperor or Princes must perform for themselves. At these times the Emperor or Princes are the

heads. The inferior forms of worship may be entrusted to retainers and proxies. The person who acts for the lord is then the chief worshipper. Those in the service of Kishin (Spirits) are called (Fushiki) Priests and Priestesses, Kannagi are what are now known as Miko. When speaking of Fu and Shiku, the former is a woman and the latter a man. The Shiku is the present Negi and the word means Hafuri (Brinkley gives Hafuri as "An official of a Shinto Shrine"). Those ordinarily called Kannushi and Guji are the same as these. From the middle ages Bozu have existed.

These are at present called Bettsuto, 別當, by the vulgar. Bettsuto and Shiku are the same. Both are in the service of the spirits, but are not chiefs of worship. The uneducated are not aware of this. To think that the Chiefs of Worship are the same as the Bettsuto and Kannushi is to fall into error. Then again the Shinshu (written with the same Chinese characters as Kannushi) is the Spirit's true body, it is sometimes made of stone or wood. It is similar to the Ihai (rank tablet), but it is not the same thing. It is what the vulgar call Shintai (the Spirit's Body). In Japan Shu (Lords) of stone and wood are not made. The Nasa is made of paper, and it is the common custom of Japan to call this the Spirit's Body. This is the Shinshu. To call the Shiku by the word "Kannushi" is an error. Nearly all Shinrei (Spirit Souls) are placed in Byo, or Shi (Shrines). The meaning of "Byo" is "Mya," and of "Shi" "Yashiro," but really they are both the same.

In China the Shrines of the Five Peaks, and Four Rivers are called both "Byo," 廟, and "Shi," 祠.

The Shrines where the souls of Sages, Princes, Dutiful Retainers, Honest Samurais, True Women and Chaste Wives, etc., are worshipped are called "Shi." The two names are joined together and the shrines called "Shiyo."

To call the place of burial (Haka) "Byo" is a mistake made by the common people of this day.

The general habit of calling the Shi of the Kami by the word Sha 社 is an old error. Sha is the Sha of Shashoku (Gods of the land and grain). But to speak of the "Tsuchi no Kami" as "Sha" is quite correct.

In China a sacrifice always accompanies worship. Cattle are called "Tairo," sheep "Shoro," and swine "Dokoro." Cattle, sheep and swine are called the "Three Sacrifices." If 三牲 a sacrifice accompanies the act of worship it is called Matsuri, if no sacrifice then Sen 薦. (The meaning of Sen is rather obscure. "Pleading" I think, would be the right word). Sen and Matsuri are ancient terms. Though in Japan deer and hares are used for sacrifice, there are not many different forms of such worship. Birds and fish are generally used. In the shrines where Buddhist priests are in charge not even fish or birds are used, the offerings consist only of vegetables. It might properly be called "Sen" and not "Matsuri." This is where Japan and China differ. If this custom were changed now it could only result in harm. It is better to leave it and make no change.

In worshipping his ancestors the Emperor has seven Byo, the different princes each five, and the great men (Taifu) three. The Upper Retainers of the Emperor (Genshi) being of high rank and wealthy have each one shrine. The Byo is not a burial-place. It is where the Shinshu is placed. Of the Emperor's seven that of the original ancestor (Taiao) is in the middle with three shrines on the right and three on the left, all facing south. Those in the left are called Shobyō, 昭廟 (bright shrines) and those in the right "Bokubyō" 穆廟 (back shrines). They are known as the "Three Shō" and "Three Boku." The Shrine of the Taiao is worshipped perpetually. The other six are three generations from the living Emperor. At the seventh generation the Shrine is destroyed, and its Shinshu is put into a closed shrine on one side of the Shrine of the Taiao, with the other Shinshu which have ceased to be worshipped. Though the term "destroying" has been used this is not actually done. The eaves only are taken off and destroyed; fresh ones are made,

while the rest of the Shrine is only repaired, repainted and used over again. Beginning from the bottom the Shinshu are gradually moved up, the new one being placed in the lowest shrine. The Boku becomes the child of Shō, and the Shō the child of Boku. The shrines of father and son are arranged next to one another.

Though the several Dukes have each two Shrines, a Shō and a Boku, in addition to the Great Ancestor they worship four generations back, that is as far as the Great Grandfather. At the fifth the shrine is destroyed and the Shinshu is moved as above.

The Great Men have each three Shrines one Shō and one Boku, and worship two generations back as far as the Grandfather; then the shrine is destroyed and the Shinshu moved.

The Retainers worship at only one Shrine, their father's, which is called "Shobyō (name shrine). The Grandfather's shrine and those further back are not worshipped.

The rules of the Sobyō are as above.

O (Kings) have on their right what are called Gods of Grain and Soil. These stand on the right of the Palace (Chotei); on the left are the Sobyō.

The Emperor and Princes in all important Government matters must worship at the Sobyō. As nearly all the great government ceremonies are performed at the Sobyō, the Emperor and the several Dukes are often there.

Nearly all the ceremonies of the Sobyō are controlled by officials called Taishōhaku 大宗伯, and Daijō, 大常.

The burying ground of the Emperor is called the "Misasagi," of Dukes and those below it is called "Haka." Both "Misasagi" and "Haka" are situated from 5 to 10 ri from the city walls. These are guarded by many separate officials. The Emperor and Dukes do not frequently worship at them, as they do at the Sobyō.

The Misasagi and Haka have gardens. Near by are sleeping palaces built for the abode of the Shinrei of the former Kings and Dukes. Therefore sometimes they are called Sleeping Gardens, or Sleeping Burial Grounds, or by the people "Reiya." These are not Sobyō.

The monthly worshipping of the Sobyō is always done by the Emperor. Besides this there are the holidays or days of worship, one each season. For this purpose the middle months of the four seasons, namely, the second, fifth, eighth, and eleventh months are kept. There are also two Fete Days, one in the middle of Spring and one in the Autumn. These holidays are days of good fortune. Outside spirits are all worshipped at these times.

Days of Mourning are the days upon which people's ancestors and parents have died, one day in a year. They are called mourning days because nothing but mourning is done. To mourn is to have a sorrowful heart. On this day the dead ancestors and parents are thought about, and the heart becomes as at the time of their death; grief arises, all work is stopped, and one sorrows. Therefore days of mourning are kept as days of grief to the end of life. To mourn is the duty of a life-time. Therefore Mourning Days are different from the four ordinary worshipping seasons, and the worship on that day is different. As regards clothing: White (uncoloured) clothing, the clothing of sorrow, is worn. During these rites no music is used. The offerings do not differ from those presented on fetes for Good Fortune. The only difference is that instead of thoughts of Good Fortune there are thoughts of Sorrow.

In China from ancient times until the present, the Government has never abolished the worship of the Shrines. From the middle ages on, though Buddhism has become popular and Emperors' Kings, and Dukes have believed in it and honoured it, in time of mourning and worship, the teachings of the Sages have always been observed rather than that of the Buddhists. This also applied to the Samurai and great men. Even those believing in Buddhism only employed Buddhist priests to perform sacrifices and read the scriptures, without interfering with the household worship. In Japan, from the most ancient times, the Emperor has never had a Sobyō. It is

not clearly known what kind of Shaishi (God worship) was observed before the advent of Buddhism. Everything was dark and the country's history is not clear and there is no way of finding out what was done. After the advent of Buddhism it would appear that Buddhist worship was observed. With regard to burial, in ancient times all from the Emperor down were buried in distant places and not in the Buddhist temple grounds. From the Middle Ages on it has been the custom to bury the Emperor in the Buddhist temple grounds. When we come to warlike times much more have the teachings of the Sages of the Middle Kingdom been neglected. There has been no one to take interest in the ancient things of this country, therefore Buddhism only has been observed and the true rites of religion and mourning have been neglected. In the present highly civilized times there are many Confucian scholars amongst the *samurai*. There are not a few who read books, study writing, and observe filial and brotherly love. This is truly the light of the Toshiro, the kindness of God, shining on Akitoshiu (Japan) exceeding that of all former ages. Now, if the ceremony and worship of the Sobyo is carried out, everything is possible. It is a very sad thing that from the beginning of the Tokugawa Dynasty the law-givers have been conservative and entirely absorbed in government instead of giving this matter attention. This is only a continuation of decayed customs. At present the restrictions against Tenshukyo (Christianity) are very strict. All without distinction, high and low, must by law honour Buddhism, and thus think that only Buddhist rites for mourning and worship ought to be observed, and so they look upon the teachings of the Sages of the Middle Kingdom as one and the same with Christianity and therefore to be prohibited.

And this idea that everything ought to be left to Buddhism was acted upon. It was a mistake of the people. The prohibition of Christianity is for the best interests of the country. But how is it that the teachings of the Sages have been confounded with it? As shown above, the practice of Buddhism has been left to the individual, specially as it is the law of the present generation that all must worship at the local Buddhist temple. There is no harm in this.

The practice of leaving worship to Buddhist priests and only using Buddhist rites for the sake of convenience is all very well for the common people, and the unimportant. But *samurai*, great men, and of course Princes, etc., ought to build Sobyo, and Worshipping Halls, and to observe the worship of the four seasons. Instead of this, to leave the priests to practise Buddhism, and for themselves not to sacrifice, never to fast from flesh and wine, and in their houses not to have even the simplest form of worship must be called undutiful. It does not matter how magnificent the Buddhist rites are, if the child and grandson do not do the duty to the ancestor by worship in their own persons, the ancestors and parents cannot recognize it.

While the parents were alive the child's nourishment was not neglected even for one day. The dead do not need daily food and drink to nourish them, but it would not be a difficult thing to worship at their shrines once in each of the four seasons: to neglect this cannot be called dutiful.

According to the present common Buddhist custom, one year after death, and two years, seven, thirteen, seventeen, twenty-one, twenty-three, twenty-five, twenty-seven, thirty-three, fifty, and two hundred years after death there should be rites observed. Thus for many years there is no act of worship. After 100 years then only once every 100 years. This is really not strictly Buddhist law, but is taken from a work called *Kiunenhonki*. It is false to say that this work was written by Shotokutaiishi. It is a fictitious work of modern years. It is not necessary to believe what is written in it, as it is full of extravagant falsehoods.

But at present as a proof that one does not believe in Christianity it is the law of the country that Buddhism must be worshipped, therefore if not every year at least once in three or five years it is necessary to go to a Buddhist temple and worship or to send for Buddhist priests and have the

worship carried out in the house and thus fulfil the law of the land.

At present Kings, Dukes, and Great Men rent within the temple grounds their burying places. Priests act as guardians of the cemeteries and are repaid for such services by acts of worship. This custom must not be abandoned but if one really has the heart to mourn it would be better to worship once a year at home and not as the priests.

At present though there exists a Byo of the ancestors of the Gods (Shozo) 神祖 and those following, at Mount Koye in the Western Castle (where H.M.'s present Palace is) there is no worship performed, but according to popular custom seven and thirteen years after the first year (taisho) 大正 at the two temples of Toyozan and Zozoji every day 1,000 priests assembled and 1,000 parts of the Buddhist scriptures were read and thus in ten days 10,000 parts were read as worship. A Kuge was sent by the Emperor to be present at those times. In addition to the ten days reading of the Great Law there were two days of Meeting of the Law. This cost not only the country a large amount of money, but the several Dukes and Government officials who assisted had also to spend several thousands of gold. Three years after the death of Kenryo (the Tycoon), Bunryo died and then again in four years there was the death of Shobyu. Thus in less than ten years between the reigns of Hoyo and Shotoku there were three funerals, and therefore at these two temples of Toye and Zozo there were as many as three Buddhist ceremonies in a year. It was not possible to pay the expenses of such a number of Meetings of the Great Law from the resources of the country, as it would barely leave enough to pay for the country's needs, so at the beginning of the Kyoho a new law of the land was issued, and the reading was reduced from 100,000 to 1,000 parts, and the 1,000 priests were reduced to 200 or 300 and the reading of the Kyo thus limited to five or three days. The Emperor's messenger was also done away with, and the Great Law Meeting was reduced to a Small Law Meeting. In this way the expense to the country was reduced to 1/10. Then too the several Dukes and officials connected with the ceremony were saved the great cost to them in money and grain. This was a very good plan. But if the rites of the Sages and ceremonies of the Sobyo had been observed, even were the worship conducted once a month, the expenses could not exceed 1/10 of the present Buddhist one. No time would be wasted, and but for the third and seventh day of purification the worship would only occupy one day. How is it that these rites of the Sages are not observed? Is it needful to spend all this money on the Meetings of the Great Law?

But instead of this worshipping in the true form, Buddhist rites are observed, the chiefs of the people spend the important riches of the country on the former Emperor in the 5th and 7th year by collecting 1,000 priests and reading 10,000 parts of the Scriptures, and nothing more. The Dukes of a great country, and of course the rich and honourable people even, have 1,000 parts read for their Ancestors and parents at the Temples. As now the number read for the Government is reduced to 1,000, there is not much difference between it and the Dukes' act of worship. It can be said that it does not differ for high or low again with regard to Buddhism when it comes to the support of 1,000 or 10,000 priests, it is but finding food, drink and clothing for five or ten days. By doing this it is doing good. It is certainly not to give to a number of priests the trouble of reading 1,000 or 10,000 parts of scripture, the object is but to give them food. Then again the priests who receive this do not wish to do so for nothing, therefore they endeavour to repay their hosts by worshipping according to the rules of their different orders. The true meaning of Buddhism is to do good by nourishing the three Buddhist treasures. It is not the intention of the host to give trouble by asking the priest to read the scriptures. The present form of Buddhism tends to reduce the nourishment and to make the priests read 1,000 parts, and thus to cause trouble in the observance of the rites. This differs from the true intent of Buddhism. Again amongst a great crowd of priests,

there are many who are profligate without shame, and who are guilty of rude and irreverent conduct at the Law Meetings. What merit can there be in collecting a lot of these fellows to read the scriptures. It is just useless. But, as at present there is no worship at the Sobyo, and the prevailing fashion of Buddhist observances, without pleading for the Ancestors or parents is followed, rather than stop this it would be better to read 10,000 or 1,000 parts, and for Dukes and honourable men to have either at the Temple or their own houses, priests of good works assembled, and to establish great fast meetings and perform Buddhist ceremonies. In worshipping ancestors and parents, the Shinshu and Shinhai are used, the Shinshu being the dead person's true body, or shade image, and the Shinhai the tablet on which is written the whereabouts of the dead person's Shinrei (soul). Though both are made of wood, the meaning and law with regard to them is quite different. On the Shinshu the name of the dead is written, on the Shinhai is written the Shini (spiritual rank). The Shinhai is also called Shinhan (Spirit board). This is what is called the "Ihai" by people of to-day. The Taifu and those of higher rank having Sobyo (ancestral shrines) and Shido (worshipping halls) should erect Shinshu, those having no Shido ought only to erect Shinhai, and not Shinshu. The reason is that the Shinshu being the real body of the dead person it is the dwelling place of the soul, and there is usually some one guarding it, so that in the event of fire, floods or other catastrophes it can be moved to some other place; if to be carried away accidentally by flood or burnt by fire the crime of allowing this is just the same as injuring the body of a relation. The Shinhai only shows the rank, and is of no great importance to the soul and should it be accidentally burnt or swept away no crime of injuring the body of a relation has been committed.

In Veddo, where fire is specially dangerous, many of the *samurai* and Taifu live only as lodgers and even the rich cannot erect Shinshu.

Amongst the vulgar of to-day it is thought that the Shinshu and Ihai are one and the same thing. Even scholars through not thinking get the terms of Shu and Hai mixed.

As mentioned already Mourning Days are those upon which one day a year is kept in memory of relations who have died. The calling of the monthly recurrence of the day, the Mourning Day, by the populace, and the visiting of the temple to burn incense and of the burying ground to offer prayers is an error. In these days Kings, Dukes, Great Men and those below them neglect to worship on the Good Fetes of the Four Seasons and instead pray any month to the Ihai. This latter though no true ceremony ought not to be given up, otherwise it would result in losing touch with ancestors and parents, and possibly result in the ceasing of worship altogether. It is better therefore to continue it, as it is the beginning of the connection to prevent the forgetting of ancestors and parents. If the worship of the Ordinary Fetes of the Four Seasons is observed then the monthly visits to the burying ground and the burning of incense at the temple may be discontinued.

The presentation of tea and cakes and the offering of prayers on the 1st and 15th of the month is a custom of the Middle Kingdom. Though the worship at the burying ground is not an old custom it exists in China. From the To dynasty it has been the custom every year on the Seimei day to sweep the grave and worship with wine and flesh. Seimei is the third day of the third month. In Japan worship is performed on the Chugen. Chugen is the 15th day of the 7th month. It is a rite which originated in Buddhism and is known as Urabon. But customs differ in China and Japan. Though Seimei is the proper time to worship it is not necessarily wrong to worship on Chugen, and there is no reason why this latter should not be left as it is.

Though men differ in what they adopt or reject with regard to the above, thick is better than thin, and though there is no rule of the country about the matter, it is better to choose from the old ceremonies and follow that which is best.

R. J. K.

MARRIAGE OF DR. RITTER.

There took place on Sunday afternoon at the Swiss Consulate-General, No. 56 Bluff, the marriage of Dr. Paul Ritter, Swiss Consul-General, with Miss Louise Reidhaar, daughter of a prominent physician of Basle, and herself a most charming and accomplished lady. Miss Reidhaar arrived by the last German Mail, and has since been staying with Mr. and Mrs. P. Colomb at No. 10, Settlement. The civil ceremony had been performed on the previous day by Mr. Coates, German Consul-General, acting as local Registrar for Switzerland.

On Sunday the wedding party—Dr. Ritter and his bride, being accompanied by H.E. Count Arco Valley, Mrs. Colomb, Mrs. Pfister and Mr. Coates—arrived at the Consulate-General about 3 p.m. and the ceremony at once began, Mrs. Brendlé playing the wedding music while Mrs. Colomb attended the bride. The latter was beautifully dressed in white satin. The service was performed by Herr Pfarrer H. Haas, German Pastor, who made an appropriate speech. Mr. Coates also gave an address congratulating the community on this latest addition to their ranks. There were many handsome wedding gifts, of which perhaps the most noticeable were portraits of the Emperor and Empress of Japan, presented by their Majesties through H. E. Governor Sufu, in recognition of Dr. Ritter's public services as Doyen of the Consular Body in connection with the coming into operation of the revised treaties and of his long tenure of office in this country. Among those present were: His Excellency Governor and Mme Sufu; His Excellency Count d'Arco-Valley, German Minister; Mr. Coates, German-Consul-General; Admiral Mori; Mr. Bonilla, Spanish Consul; the Belgian Consul and Mrs. Bune; Mrs. Frigue, Mr. and Mrs. P. Colomb, Mrs. J. Colomb, Mr. and Mrs. Gielen, Mr. and Mrs. Pfister, Mr. Rinoiye, Mr. Otani, Mr. Yegi, Mr. Fujinami, Mr. Watanabe, President of the Chihō Saibansho; Mr. Kobayashi, Chief Procurator of the Court; Mr. and Mrs. Thiel of the German Legation; Mr. S. Boye and Mr. S. Specke of the German Consulate General Staff; Dr. Koch, Marquis and Marquise de Nembrini Gonzaga, Mr. and Mrs. A. Meier, Mr. and Mrs. Sulzer, Chevalier de Waepenaert, Mr. H. Abegg, Mr. Ehrhismann, Mr. Bosshart, Mr., Mrs. and Miss Herb, Mr. Lehmann, Mr. Horsch, Mr. Mees, Mr. Conil, Mr. Keiffinger, Mr. Engert, Mr. Benedictker, Mr. and Mrs. Pors, Mr. and Mrs. Holm, Mr. and Mrs. Bengen, and others.

SCHLÜTER CONCERT.

We dwellers in Yokohama have, this winter, the high felicity of including among our fellow-residents musical *virtuosi* of whom any city in the world might be proud. We have, at times; had bright meteoric visits from some of the noted and famous performers of the day—such as Arabella Goddard, Terschak, Remenyi and the Chevalier de Kontski; but to have such artists as Messrs. Gentile and Schlüter come to settle among us—to become fixed stars in our little firmament—is an event, hitherto unparalleled in the history of our community. We are speaking well within the mark when we say that no such playing has been heard in Japan, as that of Signor Gentile and Herr Schlüter, since the days when the lamented de Kontski and Remenyi visited this *ultima Thule*. The performances of the past week prove this; and the response of the public in their attendance at the Public Hall also proves that the inhabitants of Yokohama know how to appreciate such good things.

Herr Schlüter made his second appearance here on Saturday, the 7th instant, before a full house and most enthusiastic audience, in a programme consisting of six numbers—which we reprint for reference—and in which he was assisted by some of our amateurs.

Item No. 1, consisted of two movements from an early Beethoven quartet for pianoforte and strings: Miss Poole taking the leading part with that charming grace and culture of which we have already had experience on other occasions.

The effect of her performance was, however, marred by the piano—the leading instrument in the composition—being *closed* instead of open: with the inevitable consequence that the accompanying instruments (admirably played in every respect) assumed a prominence not intended by the composer.

No. 2 displayed the sweet voice and good training of Miss Florence Mendelson; who gave an efficient rendering of Schumann's *Abendlied*, and Cornelius' *Bräutlied*. Applause, bouquets and an encore were the inevitable result.

No. 3 was an example of the Italian school of two centuries back: the composer, Locatelli, being a follower of the founder of that school—the great Arcangelo Corelli. This number served to display Herr Schlüter's wonderful command of his instrument: although the fashion of the Sonata is *rococo*, and perhaps somewhat uncongenial to the taste of a twentieth-century audience.

No. 4 brought out a new pianist. Mr. Paul Schlüter, brother to the concert-giver, is an amateur of great skill and attainments; which were admirably displayed—especially in the *staccato* movement by the Russian composer, Rubinstein. We should like to hear Mr. Paul in some better-class music before giving a final pronouncement on his abilities. Sufficient now to say that whatever he did on Saturday was well done; and his accompaniments to the solos of his brother were in excellent form and taste.

No. 5 was the only unsatisfactory item of the programme and quite unworthy of its surroundings. We will content ourselves with the reflection that a gentleman may be a most excellent business-manager and financial-agent; but at the same time have no claim to appear as a vocalist.

No. 6 gave us a further exhibition of Herr Schlüter's grand technique. It was displayed in various pieces, grave and gay, of the modern school, embracing French, Italian, Polish and Hungarian styles, and the concert ended in a veritable triumph for the performer, who has apparently learned how to annihilate difficulties.

And now that Herr Schlüter has proved to us that he is a *virtuoso* of high class, we would like him to show us that he is also a great *artist* by exhibiting some of the immortal works of the Great Masters which form the classics of Music. Why should we not have a combination-concert to wind up the season wherein all the artists now in Yokohama would unite? To hear some of the Sonatas composed by Mozart and Beethoven for the pianoforte and violin, performed by Gentile and Schlüter—should be something which would remain in our memory for long years to come. And if the Signorina Mastropasqua could be induced to add thereto some of her unrivalled Italian vocalization, we should be trebly charmed and doubly grateful.

PROGRAMME.

- 1—Quartet E flat major, (d'après le quintet) Op. 16 Beethoven.
For Piano, Violin, Viola and Cello.
Andante cantabile—Rondo, allegro ma non troppo.
Miss POOLE, HERR SCHLÜTER, MESSRS. H. A. POOLE and ROD. SCHMID.
- 2—Songs—
a. "Bräutlied" Cornelius.
b. "Abendlied" (Violin Obligato) Schumann.
Miss F. MENDELSON.
- 3—Sonata, F minor, for the Violin Locatelli, (1693-1764.)
Molto Largo—Allegro ferace, ma non troppo presto—Adagio, molto cantabile.
HERR SCHLÜTER.
- 4—P. F. Solo—
a. "Allegro" F major, Op. 17 Neupert.
b. "Staccato Etude" C major, Op. 23 Rubinstein.
Mr. PAUL SCHLÜTER.
- 5—Songs—
a. "Schöne Wiege meiner Leiden" Schumann.
b. "Verrath" Brahms.
Mr. WM. FRIEDLANDER.
- 6—Violin Solos—
a. "Adagio pathétique" Godard.
b. "Romance" Papini.
c. "Mazurka" Wienfawski.
d. "Scherzo diabolique" Jenő Hubay.
HERR SCHLÜTER.

LAW CASES.

CHARTERED BANK v. AH SHING & Co.

An action has been initiated by Mr. E. M. Janion, of the Yokohama branch of the Chartered Bank of India, Australia and China, No. 58, Yamashita-cho, in the Yokohama Chihō Saibansho against Chung Fang-ting, of Ah Shing & Co., No. 16, Yamashita-cho, in the same city, claiming £318/9/5 or yen 3,143.77 in Japanese currency, with 6 per cent. interest per annum from Nov. 22nd last until fulfilment of liability in this case. The hearing will take place at a date to be fixed.

HITZ v. WAGEN.

Mr. Z. P. Hitz, a wine merchant in France, has brought a suit against Mr. John F. Wagen, of No. 163, Yamashita-cho, Yokohama, in the Yokohama Chihō Saibansho, claiming 1,364 francs and 17 centimes with 6 per cent. interest from March 28th last until the execution of judgment. The hearing of this case will take place later.

WEALE VERSUS AKASHI.

In the Yokohama Chihō Saibansho on Wednesday afternoon, before Judge Yasuda, the hearing was resumed of the suit brought by Mr. Weale, of Messrs. Cornes & Co., No. 50, Yamashitacho, Yokohama, against Mr. Akashi Tokujiro, of Yamanoshiku, Asakusa, Tokyo.

Plaintiff was represented by Mr. Sato and defendant by Mr. Takakubo.

Counsel for plaintiff produced the samples his client had given him and stated that there was no difference between the sample and the articles imported by plaintiff in point of quality, size, etc., and therefore his client had fulfilled the contract.

Counsel for defendant denied these statements and urged that the samples received by defendant from plaintiff at the time of the contract differed from the articles imported by the latter, in quality, size and design. He further said that as plaintiff had presented samples before the Court his client would also present a sample in his possession at the next hearing.

The case was adjourned until Dec. 22nd, when Mr. Ito Taichi will be summoned as a witness to examine the samples on both sides.

The previous hearing took place on Nov. 18th, when plaintiff asked that defendant be ordered to take delivery of 15 cases of plush and pay yen 40,020.10 together with 12 per cent. interest per annum from the 19th of April this year until execution of judgment.

TAKAHASHI v. DUBUFFET & CO.

Takahashi Seisuke, of Komagome, Tokyo, has filed a suit in the Yokohama Chihō Saibansho against Mr. P. Jaguille, of Messrs. Dubuffet & Co., No. 77, Yamashita-cho, Yokohama, claiming yen 800 with 6 per cent. interest per annum, from January 1st last year until fulfilment of the liability in this case, and praying that defendant be ordered to pay the costs of Court. The hearing of the suit will take place at a later date.

An action brought by Mr. Nishikiya Heibei and six others against the Russo-Chinese Bank's Yokohama branch claiming payment of deposits, which was expected to have been heard in the Yokohama Chihō Saibansho on Thursday, has been postponed indefinitely.

THE BRITISH AND FOREIGN MARINE INSURANCE CO. (LIMITED) v. THE HONGKONG AND SHANGHAI BANKING CORPORATION.

In the Commercial Court of the High Court of Justice, England, the above-named plaintiffs sought to recover from the defendants under an agreement in the nature of a guarantee dated Jan. 1, 1898, certain sums which they alleged to be due to them in respect of reinsurance business transacted by the plaintiffs with the Nippon Sea and Land Insurance Company, of Japan. It appeared that in 1897 the Nippon Company was desirous of obtaining business from the British and Foreign Company by way of reinsuring risks under-written by the latter company. In order to make its position secure the British and Foreign Company required the Nippon Company to deposit the sum of 50,000 yen with the defendant bank at Kobe, Japan. On Jan. 1, 1898, the defendant bank sent to the plaintiffs a letter containing the following extract from a letter from their Kobe branch:—

"At the request of the Nippon Sea and Land In-

insurance Company I wired you on Nov. 26 that I held 50,000 yen to the order of the British and Foreign Marine Insurance Company, on their account against any claims that they may have to pay for account of the Nippon Company, who inform me that they have appointed the British, &c., Company their agents in London, and you are hereby authorised to negotiate the drafts of the British, &c., Company on the Nippon, &c., Company to the extent of the equivalent of 50,000 yen outstanding at one time in settlement of any claims that may arise."

The plaintiffs and the Nippon Company transacted reinsurance from 1897 until May, 1901, when the Nippon Company's agent in London issued a circular stating that it had been found necessary to make a call and that some difficulty was being experienced in getting in the money. Up to this time the plaintiffs had not presented any drafts to the defendants under the agreement, and now the plaintiffs presented a draft for £1,981 os. 5d., and subsequently two other drafts amounting to about £1,600. The first draft was paid before the hearing of the case, and the claim was now in respect of the two latter drafts and also of claims accrued and to accrue in respect of reinsurance and returns of premiums. The defendants chiefly now relied on the fact, which was assumed to be true, that the Nippon Company was in liquidation before the presentation of the first draft, and that the plaintiffs did not show that their drafts correctly represented their claims against the Nippon Company.

Mr. Justice Kennedy, in giving judgment, said the Nippon Company wished to have the business advantage of taking lines by way of reinsurance from the British and Foreign Company, which was a well-known company of good standing. Obviously the Nippon Company had complete faith in the honesty and good management of the British and Foreign Company, and were ready to accept the settlements and figures put forward by the British, &c., Company. Now the agreement of January was clearly, wisely and purposely drawn to give the latter company a right recognised by the Nippon Company to draw bills up to the extent of 50,000 yen without question, and to get payment thereof just as if they were taking out of the till of the bank money labelled as the money of the British Company. That being so, the Nippon Company went into some form of liquidation. Before that claims had arisen from the dealings of the British Company in which the Nippon Company were interested, which resulted in liabilities of the latter to the former. When these liabilities were not discharged otherwise the British Company had recourse to the fund; but for some reason the bank demurred, and proposed to put upon the British Company a necessity of proof upon which the Nippon Company itself could not have insisted. Upon the correspondence it was clear that the plaintiffs acted reasonably, and the position taken by the defendants was wrong. As to the point that the agreement had come to an end when the drafts were presented after the date of the liquidation, his Lordship could not see that it made the slightest difference. The effect of the agreement was to place a sum of money in the bank from which to pay without question the drafts of the British and Foreign Company. How could the bank say that the position had changed, and that therefore it could not pay? The defendants' case would require the reading in to the agreement of the words "correct" amount or something similar or "subject to the approval of the Nippon Company." There would be judgment for the plaintiffs for the sums claimed with interest at 4 per cent., and a declaration that they were entitled to present drafts for purchase up to the sum equivalent to 50,000 yen.

AMERICAN TOPICS.

We can not find that any of the leading American journals bear out the theory advanced in our columns yesterday by a correspondent, namely, that the loss made by the Pan-American Exposition at Buffalo was due to keeping the doors open on Sunday. The general view seems to be that exhibitions have been overdone, and that in this particular case there were several injurious influences operative, as the unpreparedness of the exposition itself in the early days of its career; uncertainty as to the time when it would be really worth visiting; bad weather both in the spring and in the summer, and finally the assassination of the President. One journal notes that although no other exhibition ended quite so disastrously, very few have ever paid a profit. Chicago, New Orleans, Atlanta, the Paris exhibitions with one exception—all were financially unsuccessful. It appears rather

incredible, therefore, that Sunday opening was the real, or principal, source of failure in Buffalo's case.

After an exhaustive investigation lasting six weeks, it seems not improbable that there will remain some uncertainty about the Schley affair and that Congress will ultimately order a new inquiry. Schley has explained very fully and clearly why he did the things that his enemies say he ought not to have done and why he did not do the things they say he ought to have done. The result, thus far, is that even his opponents acquit him of any want of physical courage and fall back upon the charge that he is timid in the presence of responsibility. After that point has been reached, the controversy might well be suffered to drop. Nothing elicited at the inquiry constitutes the smallest justification for the hubbub that has been raised, and even the most prejudiced onlooker must confess that Admiral Schley's acts are capable of being defended in such a manner as to rehabilitate his professional reputation. It has been a very sorry drama, and the curtain can not drop too soon.

Dr. Peebles, writing in *Mind*, makes a striking comparison between what he calls "the living message of immortality" and the orthodox or "churchian religions":—

"It is the orthodox religion that has no 'message'—no present messages from ministering angels or departed friends. Modern theology offers us a religion living, or struggling to live, on the echoes of old messages delivered to polygamy-practising patriarchs and Palestinian Jews. Twentieth-century thinkers can not feast on either Israel's manna or New-Testament history. God is alive. He speaks just as frequently and fatherly to us as He did to treacherous Jacob, or to David of doubtful morals. Noah's ark could not serve for our transoceanic travel.

"Without a vision," said the inspired prophet, "the people perish." But evangelical Christianity has no vision, no trance, no message from the loved in heaven; hence, Spiritualism is radically supplanting it. Christian churches must accept present spiritual phenomena or die. Confessions of faith are already being 'revised.' The Athanasian creed is actually dead. Science and psychism, having buried its putrefying carcass, are now deodorizing its temples.

"Churchian religion talks of a *Dead Jesus*, of the empty tomb, of offerings to the Lord of 'goat's hair and ram's skin dyed red,' and of the atoning blood that banishes the innocent in place of the guilty—salvation by substitution! The horn that yellowed in Kedron will not suffice for this century; neither will the leathern girdles nor wild locusts of any wilderness Baptist. Blessed be Spiritualism, with its presence of the living Christ, its ministering spirits, inspiring phenomena, constant baptisms, and messages that tell of abiding love and eternal soul unfoldment!"

In compliance with the wishes of the Central Tea Guild, Tokyo, Mr. Saito Shichiro left Yokohama for the United States on Dec. 10th for the purpose of approaching the American authorities in connection with the recent movement taken by Japanese tea merchants who advocate the total abolition of the duty imposed by the Republic.

It was reported from Washington on Nov. 13th that Secretary Long intends to send Rear-Admiral Robley D. Evans out to the Asiatic station, to be second officer in command. Both Admiral Remy, commander-in-chief of that station, and Admiral Kempff, junior squadron commander, will return soon to the United States, having served out the term allotted for service in Asiatic waters.

The U.S. pension roll at the end of the last fiscal year included more names by 4,206 than at the corresponding date the year before. The list included 907,735 names on July 1 last. There were added to the rolls during the year the names of 44,225 new pensioners, while those of 3,567 were renewed and restored. In all, 43,586 names were dropped, of which 38,152 were in consequence of death. As a result of the war with Spain 5,604 names were added. The total amount disbursed was \$131,568,216.

In consequence of the opening of the Louisiana Purchase Exhibition at St. Louis, U.S.A., in April next, Mr. Ando Jubei, a porcelain merchant of Nagoya, and other business men of the neighbouring districts are reported to be at present busily engaged in forwarding exhibits. News from Osaka says that as the result of a conference recently held among local merchants it was resolved that the Central Government be asked to lay before the Diet a proposal for an appropriation in connection therewith, and that Mr. Ando, who is now staying at Osaka, will come up to Tokyo at an early date for the purpose of obtaining the support of the Tokyo merchants.

Reports were received at Helena (Montana) on Nov. 18th of a disastrous wreck on the Great Northern near Culbertson station, in the north-eastern part of the state. An eastbound freight, extra, collided with a work train, and 25 Japanese are reported to have been killed. The extra was running 25 miles an hour round a sharp curve in the track at the time of the accident. So far as can be learned the Japanese were the only ones injured.

Word was received on Nov. 11th at the New York Central Railway offices from Spreckels & Co. of San Francisco, who own and operate the Oceanic Steamship Company, that the British Government had ordered it to carry the Australian-London mail from that date. Later in the day a dispatch was received from the same company stating it had also got from the French Government a contract for transporting mail from Tahiti, which is the chief port of all the French possessions among the Pacific islands. Both of these new contracts are the result of the record-breaking trip made by the mail in two trials made over the American route. Up to last August it had been taken by way of the Suez Canal to Brindisi and from there to London by rail, the trip taking thirty-five days.

Two large steamships especially constructed for lumber carrying are to be placed on the run between Puget Sound ports and the Orient, said a Tacoma (Wash.) telegram of Nov. 10th. They belong to the fleet of the Sutherland Steamship Company, Limited, of Newcastle-on-Tyne. Though the company has been considering the advisability from a business stand-point of taking a hand in the immense lumber-carrying trade from Puget Sound to the Orient, it was not until Mr. Sutherland visited Puget Sound, which will be the American terminus, that it was definitely decided to establish the line. At first only two vessels are to be placed on the run. The first of these will arrive some time in January, followed probably a month later by the second. Should the business warrant it other carriers will be added from time to time. The vessels to be operated first are large turret steamships, with a lumber-carrying capacity of 3,000,000 feet.

When the last steamer left San Francisco a test of the ability of submarine torpedo boats of the Holland type to spend long periods safely under water was being arranged for. At the tuning-up plant of the Holland Company at New Suffolk the *Fulton* was to be sealed up in the early evening and remain sealed up from twelve to fifteen hours. Besides her regular crew, in command of Captain Frank Cable, there would be in her Lieutenant MacArthur, who is to command the submarine boat *Adler*, and Rear-Admiral John Lowe of the United States Navy. Compressed-air flasks would be filled to their capacity, men furnished with food for a day and with settees with which to make themselves comfortable during their long watch below. There would be those on shore who could easily see that all the conditions of the test are fulfilled. The Russian naval attaché, Captain Baron Ferson, and a Japanese representative, Lieutenant-Commander Ide, were expected to witness the trial of the *Fulton*.

Great possibilities for the rice industry in Louisiana and Texas are predicted by Mr. Frank Bond, an expert of the Department of Agriculture, who has looked over the ground. Within the next five years or so the United States will, in

his opinion, be producing rice enough to supply all the demands of home consumption and will have a surplus for export. Already 50 per cent. of the rice used in the country is produced in Texas, Louisiana and the Carolina districts. It is for the growers in Texas and Louisiana fields that Mr. Bond predicts a future, as in the Carolina fields, which are 200 years old, the character of the soil precludes the adoption of modern methods of cultivation. The rice-growing industry in Texas and Louisiana, however, is comparatively recent, and largely the result of the irrigation problem which confronted the growers in those states. The rise grown in this country, Mr. Bond says, is far superior, both in grain and polish, to the Chinese rice, and there is no reason why, with its extensive cultivation the price should not be cut in half and the grain vie with the American cereals as a staple article of food for the American people.

The island of Mindanao, according to recent studies of the Colonial Bureau, occupies the extreme southeastern corner of the U.S. possessions in Asia. The mainland of the island is 270 miles from north to south, and 386 miles from east to west. The following table gives the most important geographical facts:—

Province and local gov't.	Area, sq. miles.	Population.	Dependent islands.
Basilan (Mil.)	354	8,000	56
Cotabato (Mil.)	8,344	4,148	9
Dapitan (Mil.)	3,900	20,273	6
Davao (Mil.)	9,171	33,668	25
Lanao (Mil.)	2,386	100,000	—
Misamis (Civ. May 15, 1901.)	5,379	126,942	5
Surigao (Civ. May 15, 1901.)	13,001	85,125	83
Zamboanga (Mil.)	3,486	117,503	80
	46,521	495,659	264

The natural history of Mindanao is interesting, there being 207 species of birds, among them the singular hornbill, parrots, cockatoos, jungle fowls, kingfishers, pigeons and doves; also monkeys, deer, wild hogs and crocodiles of great size. The fruit kingdom is also well represented in the pineapple, mangosteen, sapote, banana, orange, lemon, etc. Large herds of horses, cattle and carabaos are raised. Owing to the dominant Mohammedan religion there are but few domesticated hogs, although the forests abound in the wild variety. There is a little weaving of hemp and cotton fabrics, sufficient for home use. The most important industry is the production and shipment of hemp, forest and sea products. The edible birds' nests (Salangane) are gathered in large quantities from the caves along the coasts of the mainland and islands.

At the Yale Bicentennial an address was made by Mr. Daniel C. Gilman in which he gave a survey of the service of that university to science and letters. It has been remarked that in one respect Professor Gilman seemed to admit Yale's failure to win a full share of glory. *The Independent* (October 31), calling attention to this point, says:—"President Gilman was compelled to confess that in pure literature Yale could present no such long and brilliant list of historians and poets as could Harvard, and he suggested that this may be due to the fact that Yale training has tended to the development of strength rather than of grace. This may be a partial explanation. Read the list of Yale's poets, Hillhouse, Percival, N. P. Willis, John Pierpont, Ray Palmer, Edward R. Sill—there is no Emerson or Lowell or Holmes among them. And historians, Stiles, Benjamin Trumbull—we have to turn to ecclesiastical history and nominate Fisher, to find one to follow Harvard's line of Bancrofts and Prescotts. The explanation is found in part in the persistence with which Yale has held to the purpose expressed in her first charter, 'for public employment both in church and state.' Yale has held her students to the idea of culture, or, still more, of learning, only for service. The students have felt that they must be doing something for the world. So they have been great teachers, great statesmen, great jurists, great preachers, but hardly great in the fields that record the doings of other men. They have had, perhaps, too much of the thought of Alexander, that it were better to be Achilles than Homer."

FOOTBALL.

Y.C. AND A.C. V. KEIOGICHU.

The Rugby game on Saturday between a fifteen of the Y.C. and A.C. and a team from the Keiogijiku, Tokyo, played on the Yokohama Cricket-ground was rather disappointing in its one-sidedness. Perhaps too much had been expected from the Japanese players, for in this mundane world great expectations have rather a habit of not coming-off at the proper time. There can be no doubt, however, that the Japanese on Saturday were theoretically the better players. They knew the game, thanks to the excellent tuition of Messrs. E. B. Clarke and Tanaka, and it was a treat to watch their half-backs always in position keen and ever-ready, while the dexterity of their tackles and their heeling-out in scrums was very good indeed. But they were out-paced and out-weighted by the foreign players, and these things are the great essentials of the Rugby game. So time and again the foreign forwards broke away,—Drummond, Wheeler and Kilby in particular—and were able to touch-down almost as they liked. The score mounted by leaps and bounds until 39 points had been made by the Y. C. and A. C. to only 5 by the visitors. At this point Crawford, the Yokohama Captain, proposed that the teams be mixed up and the rest of the afternoon was spent in a contest between combined teams of Japanese and foreign players, a contest that was excellent practice for all concerned, but lacking entirely in interest for the majority of the spectators. A word of praise must be accorded E. B. Clarke for the capital kick by which he converted into a goal the only touch down made the Japanese team. It had to be taken at a most difficult angle, but fortunately the afternoon was absolutely windless and the old Collegian's Varsity training stood him in good stead. A better judged kick we have seldom seen. There was a large attendance and many were the hopes expressed that it would not be long before the Japanese players revisit the Yokohama ground.

NEWS OF THE WEEK.

Mr. Li, former Chinese Minister to Japan, left Shimbashi for China on the night of Dec. 7th.

John Roberts, the billiard player, has been revisiting Ceylon and beating all-comers at billiards and pyramids, though conceding long odds.

The ceremony of opening the extension of the Yokohama Water Works, which was expected to take place about Dec. 21st at Noge reservoir, has been postponed until January next.

The *N.-C. Daily News* hears that the new British steamer *Sutherland*, Captain Wallace, 2,277 tons register, which left Portland, Oregon, on the 15th of October with a cargo of lumber, is ashore in a critical position in the outer harbour at Tsingtao.

The case of Mr. Hayashi Bun-nyemon, No. 35, Shimmachi, Nagano, Nagano prefecture, against Messrs Jardine, Matheson & Co., No. 1, Yokohama, which was to have been heard at the Yokohama Chiho Saibansho on Friday was postponed indefinitely.

Mr. Tsai Kim, the new Chinese Minister to Japan, will be received in audience by the Emperor on Saturday (to-day) at 10.30 a.m. when the Minister will present to His Majesty his credentials from the Chinese Emperor. Mr. Li, former Chinese Minister to Japan, will also visit the Palace the same morning to take leave.

With regard to the fire that occurred in the Sanyo Railway Company's offices on the night of Dec. 4th as reported in our telegraphic columns, it is stated that the destroyed premises were insured in the Yokohama Fire Insurance company for yen 24,100 and in the Japan Fire Insurance Company for yen 3,500. The cause of the disaster is believed to be accidental.

On Dec. 4th, while Mr. Nagashima Chu, an assistant expert in the Metropolitan Police Office, was

engaged in analyzing certain "kanshakudama," a kind of fire crackers well known among Japanese boys, the fire-work suddenly exploded with the result that he was badly wounded in the face and hands. The unfortunate official was at once taken to the Imperial University Hospital for treatment.

It is reported that the Japanese torpedo-boat destroyer *Oboro*, which left Kure on Dec. 5th for Kobe, via Takamatsu, collided with the steamer *Uwajima Maru* of the Uwajima Steamship Company off Takamatsu at dawn on the 6th. The former had her bow damaged and some iron plates dented a little, while the latter sustained no injury. There were no casualties.

The Keihin (Tokyo-Yokohama) Electric Railway Company held its semi-annual general meeting of shareholders at the Tsukiji-kan, Tokyo, on Dec. 8th, when a dividend of four per cent. was declared. At a special general meeting that followed, it was agreed that the present line should be extended to Kanagawa and also to Haneda, and that a loan of yen 200,000 should be raised.

The Central News says the Rev. E. J. Peck was probably the last British subject to learn the news of the death of Queen Victoria. He is the representative of the Church Missionary Society among the Eskimo on Blacklead Island, Cumberland Sound, Baffin's Bay, and it was only by the chance call of a whaling vessel on Sept. 1 that he heard of the event, which had taken place more than seven months previously.

The promoters of the Yokohama Electric Railway Company made application to the Authorities on Dec. 9th for permission to lay rails between Kanagawa station and Oye bridge, Yokohama, and it is expected that the work of construction will be started as soon as sanction is obtained. They also decided that the shareholders will be called upon for a first payment on their shares by the 10th of February next. It is said that among the shareholders are many foreign residents of Yokohama.

Vernacular papers publish a table showing trade returns between China and other countries during the past four years. We summarize the table as follows, in which China and Japan alone are represented:—

	Exports. Taels.	Imports. Taels.
1897.....	16,626,738	22,564,284
1898.....	16,092,778	27,376,063
1899.....	17,251,144	35,896,745
1900.....	16,938,053	25,752,694

It may be added that the low figures for 1900 are attributable to the Boxer trouble.

Particulars are to hand of the collision between the Japanese torpedo-boat destroyer *Oboro* and the steamer *Uwajima Maru* in the Inland Sea on Dec. 6th. After having taken part in the naval manoeuvres off Kure, which concluded on the 2nd, the destroyer left Kure on the 5th for Kobe, via Takamatsu, where she cast anchor the same day. At dawn the next morning the steamer *Uwajima Maru*, from Osaka entered Takamatsu, and her pilot recognized the light of a ship a short distance away. Attempts on the part of the steamer to avoid a collision were of no avail and she struck the bow of the destroyer. The damages sustained were very slight and the *Oboro* will come round to Yokosuka in a few days.

With regard to the report that a bill for the abolition of war-taxes has been introduced into the Congress of the U.S.A., it is now stated that the Central Tea Guild, Tokyo, received a message from its New York branch, under date of Dec. 5th, to the effect that the Secretary of Finance has submitted to Congress a bill advocating the abolition of war-taxes, in which the tea duty is included, and that the New York branch, in co-operation with the War-taxes Abolition Association, specially organized in that city, has taken action in favour of the bill. The Tokyo Head Office also received a telegram from its Chicago branch, under date of Dec. 7th, saying that the latter is busily engaged with a view to getting the bill passed through the Congress. Mr. Saito Shuichiro

started from Yokohama on Dec. 9th for America in connection with the agitation.

The H.A.L. steamer *Savoia*, especially built for the Pacific, and hitherto used as an ambulance ship for the German China expedition, will open the new German line from Hongkong to Japan and Vladivostok. This line, by means of ice-breakers, will run all the year round, and is expected to run all through the winter of 1902 and thereafter.

The quantity of tea exported from Yokohama during November reached 1,008,922 *kin*, including 26,422 *kin* for San Francisco, 340,824 *kin* for New York, 500,664 *kin* for Canada, 136,772 *kin* for Chicago, and 4,240 *kin* for Pacific coasts. According to investigations made by the Yokohama Tea Inspection Bureau, transactions in tea at Yokohama in 1901 and 1900 from the commencement of the tea season to the end of November were as follows:—

	This year.	Last year.
	Kin.	Kin.
Arrivals	19,709,800	20,372,800
Sold	19,273,100	20,058,200
	Yen.	Yen.
Value	5,585,477	5,813,013
Average value per 100 <i>kin</i>	28.948	28.980

Upon the arrival of the British steamer *Landauro*, Captain Rait, at Manila the other day, the captain made the following report to Messrs. Smith, Bell and Co., the local agents for the line: "On the 25th November in the morning I sighted the steam launch *Alerta* flying signals of distress. I bore down upon her and after some difficulty took her in tow. On the evening of the same day the *Alerta* signalled me to stop, and on inquiry I found that she was making water rapidly. I accordingly transferred her crew, passengers and mails to my vessel, and cast her adrift in a sinking condition, and proceeded on my voyage. One hundred and ten head of cattle died out of 400 shipped at Singapore. These deaths were caused partly by the rough weather experienced during the 25th inst. while picking up the shipwrecked crew." The heroism of the third officer of the *Landauro*, who swam off to the *Alerta* with a life-line, amid a tremendous sea, is highly commended in the Manila papers.

According to a trustworthy source, returns for Yokohama and eight other open ports during the first ten days of this month show an excess of exports over imports by *yen* 1,250,000 owing to the large export of raw silk, copper and other principal staples. Below is a table showing exports and imports during the first ten days, together with aggregated figures from January this year:—

	First ten days.	From January.
	Yen.	Yen.
Exports	7,977,942	235,671,135
Imports	6,723,527	245,211,363
Balance	1,254,415	9,540,228
Gold exported	50,003	11,367,852
Gold imported	94,679	10,271,079
Balance	44,679	1,096,773
Silver exported	30,132	2,478,047
Silver imported	6,633	275,387
Balance	23,489	2,202,660

The following table shows the business done at each port during the first ten days of Dec.:

	Exports.	Imports.
	Yen.	Yen.
Yokohama	5,177,967	1,970,485
Kobe	1,710,927	4,241,034
Osaka	502,428	103,416
Nagasaki	129,279	241,723
Hakodate	4,961	6,164
Niigata	—	12,808
Mori	349,594	190,851
Shimonoseki	14,591	57,703
Kuchinotsu	80,235	9,250
Total	7,977,942	6,723,527

JINRIKISHA-MEN & ELECTRIC TRACTION.

On Dec. 10th, upward of 200 *jirikisha* coolies in the neighbourhood of Omori, assembled in the fields of Kabata, and were on the point of making their way to the Kei-hin (Tokyo-Yokohama) Electric Railway Company's offices to attack the officials of that concern, when they were prevented by police from Shinagawa, who advised them to dissolve and to send representatives to the company for the purpose of opening negotiations. Thereupon the excited men retreated from the scene, leaving the matter in the hands of representatives who proceeded to pay a visit to the company. It is feared that further disturbances may arise at any moment. It seems that the men asked the company to postpone its undertaking for five years, but the latter commenced the laying of rails between Kabata and Haneda several days ago.

LITERARY NOTES.

A number of Italian and French poets have says the Paris *Figaro*, contributed to an album, entitled "Mater Suavissima," a number of poems descriptive of the grace and beauty of motherhood. The collective work, beautifully printed and luxuriously bound, is intended for presentation to the Queen of Italy.

It is announced that a book is about to appear, entitled "The Kiss and its History." Its author is a "Professor of Romantic Philology," and "deals with his subject thoroughly and picturesquely." One has heard in romances of the purely cousinly kiss, but the merely philological embrace is at once a more thorough and picturesque excuse, remarks the *Globe*.

Miss Kate Perry, who died at Bexhill recently, was the last surviving child of the famous William Perry, of the *Morning Chronicle*. Thackeray, the *Athenaeum* recalls, was a great friend of hers. She read "Vanity Fair" in manuscript, and thought it the cleverest work she had ever read. Many of Thackeray's letters to her have been published, as well as a charming little appreciation from her pen.

It is stated that the Dean and Chapter of St. Paul's have granted well-space in the crypt for a memorial monument to the late Sir Walter Besant. The position selected is near the tablet that commemorates Charles Reade, and it is understood that Mr. George Frampton, A.R.A., has promised to undertake the work. The movement has been set on foot by the Society of Authors, and it is intended to commemorate not only Besant's work as a novelist as a historian, and as a citizen of London, but also as the helper of his fellow-writers.

Mr. Fisher Unwin has made arrangements to publish immediately on the instalment plan a specially prepared and fine edition of his "Story of the Nations" series. The series consist of 56 volumes, which will be offered for a short time at nearly half the published price. The series endeavours to give the average reader an accurate and impartial historical survey, no less than a condensed narrative of the social, economic, moral and mental developments of a nation. The set is sent on a preliminary payment of 8s., or less than 2d. per volume.

It may be interesting to recall that Mr. George Radford, who has launched a new weekly in London the *Week Survey*, wrote the delightful paper on Falstaff in the first series of Mr. Birrell's "Obliter Dicta." In the preface to the second series Mr. Birrell, after mentioning the fact and regretting that Mr. Radford could not be persuaded to contribute to the later volume, proceeds, with something very like an Irishism, to declare that, "in order to enjoy the pleasure of reading your own book over and over again, it is essential that they should be written wholly or in part by somebody else."

From an illustrated article on Miss Baden-Powell's autograph book, which appears in the *Week End*, it appears that one leaf of the album

contains the autograph of the Duke of Connaught, then the somewhat cramped hand of a Prince of the Roman Church, Cardinal Vaughan, gives expression to a Latin motto, which is followed by some lines by Frederic Harrison. Selous, the mighty hunter, has inscribed his name in this book, and the Marquis of Dufferin has written in Persian characters a verse from "Omar Khayyam." Miss Baden-Powell, it is not generally known, is proficient in Persian. Nansen, just prior to starting for the North Pole in 1892, wrote, "Don't judge a man according to his luck, but to his merit," after Sir Michael Hicks-Beach had curiously enough recorded "En bon heure."

What does the average Englishman know about Fénelon? Viscount St. Cyres, in the preface to his new book on the subject (Methuen & Co.), says: "Fénelon will appear in these pages as the father of eighteenth century sentimentalism—witness his politics and philosophy, his educational and literary theories—but also as an upholder of seventeenth century rationality, and of the most ruthlessly stoical of mysticisms—a disciple sometimes worthy, sometimes dilettantist, and sometimes morbid, of the great Spanish ascetic St. John of the Cross." That is so; but on these aspects of the character and career of Fénelon the bulk of our reading public, we fear, requires to be educated. Middle-aged men recall faintly the days in which they were set to translate the "Télémaque" of Fénelon into English. They remember that Calypso was inconsolable, and so forth; and that is about all. Lord St. Cyres, if they read his book, will draw their attention to the greater merits of "Télémaque"—"to the pulse of generous large humanity that beats through every page, self-denying, yet not ascetic, tender yet not sentimental, passionate yet not unreasoning, to the voice that made reach, even to Kings' houses, the cry of that helpless, hopeless, downtrodden class, which was fast losing not only the rights and dignity, but almost the outward semblance of man." Lord St. Cyres deals with Fénelon from all the possible points of view, and presents a picture of him as finished as it is comprehensive. The study is, indeed, exhaustive, and at the same time marked by a style at once careful and distinguished. This "Fénelon" should at once take a permanent position in the literature of French biography as produced by English writers.

Under the title "Cavalier and Puritan" (Smith, Elder, & Co.) Lady Newdigate-Newdegate has collected from the private papers and diary of Sir Richard Newdigate some curious and notable material that illustrates the social and political life of a country gentleman in the reign of Charles II. Perhaps the most remarkable of these family documents are the newsletters in manuscript addressed to Sir Richard Newdigate, the second baronet, at Arbery, in Warwickshire. The passion for news is, of course, one of the primitive passions, and was general long before newspapers were known. These "intelligencers" of Sir Richard appear to have been very well informed on the whole. They are certainly industrious scribes, and know how to season their letters with sensational reports and lively gossip. Of plots, duels, elopements, robberies, and Court scandals they have much that is exciting to report, often enough in paragraphs that whet the appetite with no little art. There is a story of "four score Scots," Covenanters no doubt, brought from Edinburgh to the Thames by sea "to be sold in Barbados as slaves." It is pleasant to know that some benevolent person made a purse for them and raised sufficient money to get them discharged home. In 1683, it seems, a serious attempt was made to introduce Spanish bull-fights. They were started in Red Lion Fields, and ended in a fiasco and a riot. Sir Richard Newdigate's rather Draconic rule of his large family is in some sort revealed in his diary. An irascible, well-meaning ruler of the household he seems to have been. Here is a delightful entry: "To Tom Cooper, who worked hard after I broke his head, 2s. 6d." Sir Richard's woes with his servants remind one of the domestic troubles of Samuel Pepys. Altogether,

"Cavalier and Puritan" is rich in curious and entertaining matter.

Mr. Mortimer Menpes, who is familiarly known as "Japanese Menpes," has completed his book on Japan, and it was published about the middle of November by Messrs. Adam & Charles Black. A great feature of the book are one hundred full-page illustrations in colour.

A publishing enterprise of considerable magnitude is to be launched immediately by Mr. Heinemann, who will publish the first volume of an elaborate "History of the World" in eight volumes, under the general editorship of Dr. Helmolt. The first volume embraces the history of the American continent, and the reason given for this is that in Mexico and Peru the earliest documents of man's existence are to be found.

It is said that the French Ministry are dissatisfied with the slow progress made by the French Academy with the great Dictionary on which it has been nominally engaged for the last sixty years, and for which the Government has been paying £400 a year. "At the present rate of progress, according to a recent calculation, the letter Z may be reached in about ten centuries, when it is suggested, French may no longer be a living tongue."

The *Athenaeum* says:—Notwithstanding the continuance of hostilities in South Africa, an interesting attempt is about to be made to establish there a first-class political and literary weekly journal. It will be called the *Examiner*, and is to make its first appearance with the new year at Beaufort West, Cape Colony. The editor is Mr. Charles H. Crane, and, according to his prospectus, the *Examiner* is to be "free from any bias of party or of financial interest."

Another new novel is "Count Hannibal." It is a French historical romance, in Mr. Weyman's well-known manner—hairbreadth escapes, moving accidents, &c. The story, which progresses briskly, is laid in France in 1572, and before long we are in the horrors of the massacre of St. Bartholomew. "Suddenly a rush of feet, a roar of voices surged past the window; for a moment the glare of the torches, which danced ruddily on the wall of the room, showed a severed head borne above the multitude on a pike."

Mr. Marion Crawford's new novel "Marietta," is an adaptation of an old Venetian story. The hero, Zorzi, a Dalmatian waif, is taken into the service of old Angelo the glass-blower, who feared that a man of his own caste would fall in love with his daughter Marietta. In the fifteenth century it was unlawful to teach a foreigner the art of glass-blowing, and old Antonio, intent on art, hardly realised that both Zorzi and Marietta were learning much. The course of the story is easily foreseen and pleasantly realised.

In the November *Chamber's Journal* there are some interesting extracts from Robert Chambers's *Commonplace Book*. One item is a very unflattering portrait of "the first gentleman in Europe," which Chambers received from Rogers at the banker's breakfast-table in 1844:

Amongst other things which enabled George IV. to make a good impression at first were a couple of Latin quotations, which he was sure to bring forward, one from Horace and the other from Virgil. In reality he had no more, and when this was found out the credit he obtained from them was gone.

Chambers mentions that in 1850 Dickens was making three or four thousand a year, Thackeray was spending £1,400 per annum, and Mark Lemon was taking a house at £115 a year. The *Punch* staff dined Mr. Evans, their publisher, at £2 1s. a head, and at their ordinary dinners the port cost 9s. 6d. the bottle.

Mr. T. A. Fischer of Castlercaig, Dolphington, has just published by private subscription a little book entitled *The Scots in Germany*. It is nearly forty years ago since John Hill Burton published

his famous book, *The Scots Abroad*, and Mr. Fischer will be found to have largely supplemented Burton's wide knowledge of the subject, remarks C. K. S. in the *Sphere*. It is curious, however, that no attempt has been made by Irishmen to treat their own countrymen in a similar way. We have all heard much of the Irish Brigade in the pay of the Louis XIV. but not in a very concrete way, and Irishmen for two or three centuries have been scattered over the Continent and the world generally doing as remarkable service as the Scots for the countries they have served. One remembers in connection with the assassination of Wallenstein, for example, that there was a Butler and a Gordon, the one Irish and the other Scots, connected with the event, and so on through the history, not only of the Holy Roman Empire but of all lands.

Canon Isaac Taylor, whose death is announced in his 73rd year, was a member of a remarkable family, the Taylors of Ongar. His aunts, Jane and Ann Taylor, were the joint authors of "Hymns for Infant Minds," which had an extraordinary popularity sixty years ago. The late Canon's father, Mr. Isaac Taylor, was best known as the author of "The Natural History of Enthusiasms." Like his sisters, he was brought up a Nonconformist, but became a Churchman in mature life, and his son, now deceased, was educated in the faith of the Anglican Church, to which he was earnestly attached. Mr. Isaac Taylor, the younger, was admitted to Holy Orders in 1857, and after serving curacies at Kensington and St. Mark's, North Audley-street, was appointed by Bishop Tait in 1865 to the vicarage of St. Matthias, Bethnal Green. Ten years later he became rector of Settrington, in Yorkshire, and held that benefice up to his death. In 1885 he received from Archbishop Thomson a canonry in York Minster. Dr. Taylor was an antiquary, historian, and philologist, and the list of his books is a long one. Some years ago he became involved in controversy through his courageous defence of the Mahomedan religion and its claims upon the sympathy of Christians.

An amusing book, though of a familiar type, has come out in America this autumn, entitled "Concerning English as She is Taught." The editor, Miss Caroline B. Le Row, vouches for the genuineness of all these answers culled from American school examinations. The following are specimens:—

"The House of the Seven Gables" was written by Lord Bryant.

Ben Jonson survived Shakespeare in some respects.

Chaucer was the father of English pottery.

Chaucer was succeeded by H. Wads. Long-fellow an American Writer. His writings were elapsed.

George Eliot left a wife and children who mourned greatly for his genius.

Sir Walter Scott Charles Bronte Alfred the Great and Johnson were the first great novelists.

Thomas Babington Makorley graduated at Harvard and then studied law, he was raised to the peerage as Baron in 1557 and died in 1776.

A sort of sadness kind of shone in Bryant's poems.

Sir Henry Thompson has contributed a new introduction to a revised and enlarged edition of his interesting and useful little book "Diet in Relation to Age and Activity" (Warne). Sir Henry was sixty-five when the first edition appeared. He is now in his eighty-second year, and he has added many hints on the subject with which he deals, which an increased experience has suggested might be useful. It will be remembered that Sir Henry's remarks on vegetarianism in the article which formed the foundation of the book caused considerable commotion when they first appeared. Another matter upon which Sir Henry Thompson pronounces a very emphatic opinion is the use of alcoholic liquors: "It is rare now to find anyone well acquainted with human physiology and capable of observing and appreciating the ordinary wants and usages of life around him, who does not believe that

with few exceptions, men and women are healthier and stronger physically, intellectually, and morally without such drinks than with them." It is interesting to note, too, that Sir Henry has been compelled by facts which are coming constantly before him to "accept the conclusion that as much mischief in the form of actual disease, of impaired vigour, and of shortened life accrues to civilised man from erroneous habits in eating as from the habitual use of alcoholic drink," considerable as he knows the evil of that to be.

Mr. Dent's "Temple Bible," of which the first two volumes, Genesis and Exodus, were published in the first week of November, resembles the "Temple Shakespeare" in appearance. It is issued in cloth at 1s. a volume, and in leather at 1s. 6d. Each volume has a frontispiece reproduced from a work of sacred art. To Genesis is prefixed a part of Sir Edward Burne-Jones's picture, "The Days of Creation"; to Exodus, Sir John Millais's picture, "Victory, O Lord," representing the holding up of the hands of Moses. Both pictures are very delicately reproduced in photogravure. The Authorised Version is used, and it is printed as continuous prose, with passages of poetry where the metre permits. But this is not all. The "Temple Bible" is provided with a critical accompaniment at once scholarly and modern. Dr. Sayce edits Genesis, and Dr. A. R. S. Kennedy Exodus. In each case the history of the book is given and its literary problems are discussed. At the end are notes, a map, and a table of "Biblical References in English Literature." No such Bible has yet been issued, remarks the *Academy*, and it is probable that this edition will have enormous influence on intelligent, if unlearned, readers. It presents the Bible as literature, with simple yet illuminating commentaries. Each book is light and small, and it is not too much to say that thousands of readers will find in them not only a newly edited Bible, but new ways and opportunities of reading the Bible. The books will shortly arrive in Yokohama and can be had from Messrs. Kelly and Walsh.

Mrs. Charles Bagot's autobiography, which Mr. Edward Arnold has just published under the title of "Links with the Past," is a very pleasant book. Mrs. Bagot saw the first train start from Watford, on the London and Birmingham (now the London and North-Western) Railway. As a girl, and an aristocrat, she was immensely pleased when it was rumoured that Lord Grey and Lord Brougham were to be taken to the Tower, where she devoutly hoped they would be beheaded for their naughty Reform Bill of 1831. She and her brothers and sisters flattened their noses against a window at Moor Park in order to stare at William IV. and Queen Adelaide, who were breakfasting there as the guests of Lord Westminster in 1831. She danced with her fiancé at one of Lady Jersey's great balls at Almack's. By her marriage she became great-niece to the Duke of Wellington, to whom she was then introduced in Lady Westmorland's box at the opera. "He took my hand and kept it throughout the act. My husband said to me afterwards, 'Why did you not speak to the Duke?' I had been brought up with such intense admiration of him by my father and uncles that I was struck dumb. I simply felt that I was sitting hand in hand with the saviour of England and Europe." Mrs. Bagot thinks that before bicycling young women were much more beautiful. "They had no hard lines about the mouth, and their beautiful skins were preserved by the cottage straw bonnets of the early Victorian period." Her life in Staffordshire leads her to recall the Rugeley murder. After Palmer's execution a deputation from the town waited on Lord Palmerston to urge him to change its name. "You may call it after me if you like," was his witty reply. Mrs. Bagot brings her notes up to 1900, and appropriately ends with the mention of her last sight of Queen Victoria, when she drove round London to identify herself with her people in the present war.

CORRESPONDENCE.

JAPANESE SILK IN AMERICA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—According to what the *Japan Daily Mail* published on the 4th November from the New York *Sun* on the subject of corded *kaiki* imported into the United States from Japan, Mr. Henry L. Burnett, United States Attorney, appears to hold that an error in a consular invoice as to the number of pieces or weight of corded *kaiki* actually imported under one invoice, is not indicative of any fraudulent intent on the part of the importers, and that the packing of different grades of the same goods subject to correspondingly different rates of duties, the invoice calling for only one medium grade, is not illegal. He is consequently of opinion that such irregularities do not mean a technical violation of Section 9 of the Customs Administrative Law which says: "That if any owner, importer, consignee, agent or other person shall make or attempt to make any entry of imported merchandise by means of any fraudulent or false invoice, affidavit, letter, paper, or by means of any false statement, written or verbal, or by means of any false or fraudulent practice or appliance whatsoever, or shall be guilty of wilful act or omission by means whereof the United States shall be deprived of the lawful duties, or any portion thereof, accruing upon the merchandise, or any portion thereof, embraced or referred to in such invoice, affidavit, letter, paper or statement, or effected by such act or mission, such merchandise, or the value thereof, to be recovered from the person making the entry, shall be forfeited, which forfeiture shall only apply to the whole of the merchandise or the value thereof in the case or package containing the particular article or articles of merchandise to which such fraud or false paper or statement relates; and such person shall, upon conviction, be fined for each offence a sum not exceeding \$5,000, or be imprisoned for a sum not exceeding two years, or both, in the discretion of the court."

That justice was done by the decision in this case no one can doubt who is acquainted with sterling probity and high standing of the firm concerned, but, as a Japanese, I must say that the reasons given by Mr. Burnett are open to comment, inasmuch as he is doing injustice to us and, possibly, to the legitimate importers and exporters of Japanese silks as well, by arbitrarily assuming that all the irregularities in packing as well as in invoicing are due to the alleged crude methods he believes to be in vogue in Japan among what he somewhat vaguely calls Japanese weavers and Japanese shippers, by apparently ignoring the responsibility devolving upon the importers in America under the U.S. Customs Administrative Law. It will therefore be worth while to examine a few points in his statement.

Before doing so, however, the reader should know something about corded *kaiki*, in so far as it concerns the American market. Corded *kaiki* is what is known in Japan as *kobai kaiki*, and is characterized by having a series of cotton cords on the warp and sometimes on both the warp and the weft, which makes it more desirable than plain fancy *kaiki* for making ladies' shirt waists. Its weaving for exportation was started in 1894, the idea having originated in the old-fashioned *yokume-ori*. The American demand for it has since grown with marvellous activity, and, next to *habutai*, it is now the most important of silk textile fabrics exported from Japan. Until the promulgation of the Dingley Tariff in 1897, corded *kaiki* was subject to an indiscriminate duty of 45 per cent. *ad valorem*; but by the above mentioned tariff, duties are levied under the following items of the silk schedule:—

Silk woven fabrics in the piece containing not more than 30 per cent. in weight of silk, dyed in yarn or thread in other colours than black	\$.90 per lb.
If containing more than 30 per cent. and not more than 45 per cent. in weight of silk.....	1.30 "
If containing more than 45 per cent. in weight of silk.....	3. "

But in no case shall they pay less than 50 per cent. *ad valorem*.

Great perplexity prevailed among all interested in the Japanese silk trade in America at the time when the Dingley tariff went into effect, as to what sort of corded *kaiki* should be imported in order to pay the least possible duty, being yet good enough to suit the taste of American consumers. Importers finally, as if by unanimous consent, began to bring over corded *kaiki* containing a quantity of silk as near to the 45 per cent. maximum in weight as possible for paying the duty of \$1.30 per lb., and further, weighing so much per piece that the specific duty thus to be paid would be as close as possible to 50 per cent. of the purchase price. Later, it proved that *kaiki* with heavy cotton cords was very popular among consumers, and importers commenced to import goods containing as little silk as 30 per cent. or less in

weight, paying 90 cents per lb., yet always observing the requirements as above in regard to the weight of each piece, so that the specific duty to be paid (90 cents per lb.) would be equivalent to 50 per cent. of the value, or as near as possible. It has been, and is still, almost out of the question to import to America corded *kaiki* paying \$3 per lb. as there is hardly any chance of profit. Under such circumstances the importation into the United States of corded *kaiki* subject to the duties of 90 cents and \$1.30 per lb. is still very large, and the selection of patterns in sending out orders to Japan, to suit the taste of the consumers as well as the requirements of the tariff law, is one of the most important branches of the business of the importers there. Their representatives in Japan, under instructions from their American principals, are generally very particular to observe these requirements, and in transmitting orders to the weavers in the interior they give strict instructions as to the proportion of cotton and silk to be contained in, as well as the weight of, each piece. The weavers, too, are very well aware that they must not be indifferent about these requirements; otherwise their goods will be rejected, and be consequently quite unmarketable.

Now turning to Mr. Burnett's statement, he says: "I do not find any legal evidence to establish the importers' connection with the statement of weights or number of pieces as given on the invoice, or that such errors were made by their connivance or under their direction or with their connivance or procurement."

I can assure Mr. Burnett that though he doubtless arrived at a just conclusion in the particular case in question, he will generally find it almost impossible to obtain legal evidence, or even the slightest clue to it, to establish any secret illegal connection existing through private correspondence between importers in any similar cases that may come up in future. But as a matter of course, the latter are executing their business under instructions from the former, and are kept constantly posted with the custom house requirements to be complied with in making invoices. Further, a "purchased" invoice in distinction from a "consigned" invoice in the eyes of the customs law of the United States, is construed as one that is made by the importers themselves, its real maker (their purchase agent) being simply their representative; therefore, the importers cannot renounce their responsibility for irregularities made by him. It consequently follows that it is immaterial whether an irregular invoice was made with the importers' "consent or under their direction or with their connivance or procurement," or at their representative's own discretion, the importers alone being solely responsible. On the whole, Mr. Burnett's remarks in regard to his inability "to find evidence" seem to be of very little or no value.

Concerning the irregularity in packing, Mr. Burnett says:—"It appears that the pieces in the different cases are not uniform in their proportion of silk and cotton, but it also appears that the cases of such goods are made up by the shippers in Japan as the different pieces come in from different looms, and a list is made of the goods as they are packed without any idea of assorting them, and such appears to be the recognized method of packing in the trade there. The weavers in Japan are individual weavers. The work is all done by hand looms and at different times by different members of a family, and it often happens that the exact proportion of cotton and silk does not run uniformly throughout the whole piece, as the weavers are unskilled labourers, only earning the equivalent of six or seven cents per day."

In the first place it must be pointed out that the weavers who make it their business to supply Yokohama exporters with corded *kaiki* are not individual weavers, but own mostly, or, at least, have the control of, say, fifty to a few hundred hand looms, each of which is exclusively attended to by one girl or sometimes one man. When a weaver finds his business too brisk, he may give out material to individual loom-owners for weaving. In that case the members of their family and sometimes hired hands exclusively attend to their respective looms. It is incorrect to say that all the corded *kaiki* is made by individual weavers, and particularly that "the work is done at different times by different members of a family." Moreover, we have never heard that the weaving hands for corded *kaiki* in Kiriu and Ashikaga districts were satisfied with 12 *sen* or 14 *sen* wages per day. Mr. Burnett is consequently wrong when he says that it appears to him that the cases of corded *kaiki* are made up by the shippers in Japan as the different pieces come in from different looms, and that such is "the recognized method of packing in the trade" in Japan. As a matter of fact, weavers generally deliver hundreds of pieces in one lot, and the exporters receiving them subject each piece to a rigid inspection as to weight, quality, finish, etc.—a recognized custom in shipping ports in Japan—and they (the exporters) do not in the slightest hesitate to reject the whole or part of such delivery, when they have cause to complain about any of the above points. Goods in which the "proportion of cotton and silk does not run uniformly throughout the whole piece," are, as

a rule, promptly rejected. The customary rejection is the dread of the weavers, and if any exporter accepts pieces of corded *kaiki* exceeding the maximum in weight, or in the proportion of cotton and silk, it is altogether exceptional and must be referred to some special cause. As to the proportion of cotton and silk, it is ascertained by pulling out cotton cords from a sample cut and weighing both separately. The percentage of each can thus be found to quite a minute figure, and any piece that is out of proportion will, as usual, be rejected.

It will be seen that corded *kaiki* is not the product of work done by so heterogeneous a lot of individual weavers as Mr. Burnett seems to think, and that the shippers of the same are not so innocent a crowd of ignoramuses as he apparently imagines. On the contrary, the latter, as trained (mostly Americans) business men, are perfectly well aware of what they are accepting from the weavers, and what they are shipping to America, especially as to the weight per piece and the proportion of cotton and silk, and if any one of them claims ignorance about these essential points touching the important question of the duties, one can safely infer that it is a diplomatic ignorance. It was in last February that Messrs. Marshall Field & Co., Messrs. J. V. Farwell & Co., Messrs. Carson, Pirie, Scott & Co. and others of Chicago complained to the Treasury Department in Washington that some of the importers of corded *kaiki* in New York had been allowed to import the \$1.30 (duty per lb.) goods as 90 cent. goods, the \$3 goods as \$1.30 goods, etc., and they (the Chicago houses) were being unjustly undersold by the New York houses. The consequence was that the Appraiser of the port of New York gave strict orders to have every pattern of imported corded *kaiki* analysed as to the proportion of cotton and silk, and that some of the importing houses were considerably embarrassed thereby. However, it would be illogical to conclude from the above incident that the representatives in Japan of the Chicago houses were shipping corded *kaiki* with full knowledge of the goods as to their weight and proportion of cotton and silk, thus enabling their principals to make entry at customs with correct invoices, while those of the New York houses had no such knowledge. The shippers or exporters are of course far from being ignorant of what they are packing, or from "being without any idea of assorting" grades according to the rates of duties they come under. They are perfectly able to pack solid one grade of the goods in a case, and they know, if necessary, how to pack various goods assorted in one case, and itemise them in the invoice so that at the destination the importers will be placed in a position to know what they are opening up, and the Examiners at the Appraiser's store can easily make an examination of the contents. Further, they are well aware of the trouble the importers on the other side will be placed in, when the contents of the case are in a mixed-up state, and do not easily tally with what the invoice calls for at the time of the examination at the Appraiser's store. In practice, the custom house examination is not extended to the entire lot of packages represented by the invoice, and the collector usually orders one package out of each ten to the Appraiser's store for examination, which is the minimum fixed by law. When, however, the examiner finds any irregularity or mixed-up condition in the packages he thus examines, the entire lot is ordered to the store, and is thoroughly overhauled, to the immense annoyance of the importers on account of the long detention of the goods at the store. This risk the Yokohama exporters are of course careful not to incur.

After stating that he does not find any evidence of fraud in the indiscriminate packing made, and expressing his recognition that such packing is "the mode usually in vogue in Japan," Mr. Burnett says: "It is, I think, attributable in a great degree to the careless Japanese method of packing goods of this character obtained from different looms of different individuals. It may be a crude method without being fraudulent."

After refuting his statement thus far it is hardly necessary to comment on the above conclusion of his, which is based altogether on wrong facts.

I do not intend to criticize Mr. Burnett's finding in this particular case, but according to the statement he makes as to his reasons for such finding, it would seem as though corded *kaiki* were woven by, and under the direction of, the lowest order of Japanese people working individually in an unsystematic and crude manner, with no possibility of turning out the patterns and colours as may be ordered by the American importers, or observing the requirements as to the proportion of cotton and silk or the limit of weight per piece, and one would be led to suppose that quite commonly the proportion of cotton and silk does not run uniformly throughout the piece.

Further it is rather amusing to find Mr. Burnett ignoring with apparent sincerity the responsibility of the importers as to invoices and packing, as though corded *kaiki* were packed and shipped by some insignificant native Japanese merchants, quite ignorant

of the customs and other requirements in the United States. If the collector of the port of New York accepts the above statement of Mr. Burnett as justified, I am afraid that the former will soon issue orders that all packages containing corded *kaki* imported from Japan be sent to the Appraiser's store without exception, and that the contents be thoroughly overhauled and examined as to the number of pieces, the weight of each piece and the proportion of cotton and silk, in order to fix the rates and amount of duties to be paid, the mere checking of the invoice, and the examination of the usual one package out of each ten being utterly inadequate for the purpose. Furthermore it be true that some of the goods are not uniform, throughout the piece as to proportion of cotton and silk, to the bewilderment of the customs officials in determining their grades for the purpose of the duties, it may happen that they will soon arrive at the conclusion that corded *kaki* should be subject to 50 per cent. *ad valorem* indiscriminately, as being unenumerated in the silk schedule of the Tariff, to the immense relief of those interested in Japanese silk!

Your obedient servant,

A JAPANESE.

THE GOTEMBA HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Until I read your article this morning I was unaware of the existence of any leper refuge in Japan. In a casual way I have from time to time asked my friends if they knew what was being done for the lepers in this country, but one and all, Japanese and Europeans alike, seemed to be quite as ignorant on the subject as myself. I suppose that laziness, if not indifference, is the explanation of my own ignorance, and it will most likely be found to be the reason why the other foreign residents of Japan have allowed their contributions to be represented by the paltry sum named in your article. I can imagine nothing that should more strongly appeal to the sympathy of mankind than the charity in question, and certainly none is worthier of adequate support. I enclose a small subscription, and if you will kindly forward it to the proper quarter I shall be much obliged. I enclose my card.

Yours, &c.

Yokohama, Dec. 9th, 1901.

THE MORMONS—A REPLY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A person, who by the way is ashamed of his name, and, therefore, hides it behind the title "An American Friend of Japan," has rushed into print on "Mormonism." I would treat his communication, published yesterday, with silent contempt if it were a personal matter, as a man lacking the courage to attach his name to an article is not worthy of notice.

No intelligent Japanese will believe him to be a friend of Japan, but can plainly see he is a narrow-minded and bigoted individual who wants to prevent the establishment of a religion against which his main argument is abuse. He advocates that the Japanese people go back to the days of religious intolerance. Japan has made wonderful progress, and a narrow-minded individual cannot pass as its friend by advocating that the nation violate its own laws and prohibit the "Mormons" from preaching in this land after freedom has been granted to all religions.

I agree with him that anarchistic teachings led to the death of President McKinley, and I rejoice that renewed efforts are being made to suppress these teachings, but I remind the gentleman that religious intolerance led to the death of the Saviour of the world and many great and good men including the Prophet Joseph Smith, whom God selected to again establish on the earth the Church of His Son Jesus Christ.

I am pleased to inform your correspondent that there is no section of America where the "Mormons" have more friends than in the Southern States, and that as a rule the people of the South are very kind indeed to our Elders who are labouring there as missionaries. We have over ten thousand Church members in the Southern States. There is not a true American living but who deprecates the outrages which have been perpetrated in "North Georgia or in the mountains of east Tennessee." Your correspondent approves of tarring and feathering. No wonder he is ashamed of his name! "Out of the abundance of the heart the mouth speaketh." He possesses a heart that rejoices in crime, provided the "Mormons" are the victims. Therefore, in telling of the tarring and feathering of innocent men who work without pay to spread the gospel of life and salvation, this damnable outrage he speaks of as "heroic treatment." His sentiments read like the ravings of an anarchist, but undoubtedly emanated from a professed Christian. There never was a time in America when a kinder feeling was exhibited toward the "Mormons" than at present, your correspondent to the contrary notwithstanding. As an

evidence of this the following appeared in a recent editorial in the *Idaho Enterprise*, a non-Mormon paper: "We want to say to our good friends, both Mormon and Gentile, that life is too short to vex it with the troubles of the past. What difference does it now make as to who was right, or who wrong, fifty years ago, a year ago, or a day ago? Why should we pause to dissect the corpse of a dead quarrel? Why should we of this generation embroil ourselves and embitter our lives because our grandfathers could not agree with each other? The world is moving on with majestic strides. God directs the course of events and if there be anything in the signs of the times, they mean that love and goodwill are supplanting hatred and vindictiveness. There is no folly among fools as costly as that of the revengeful and malicious human creature. It is a canker worm that eats out all the joy and beauty of life, leaving a dry shell of misery and desolation. There is not now any place for an Anti-Mormon sentiment except in the bosom of revenge."

Your correspondent has ventured a prediction and I will do the same. When he is dead and buried ("fanatics and imposters are living and dying every day and their memory is buried with them"), the Church of Jesus Christ of Latter-day Saints, established by God Almighty, will be growing in power and strength and majesty. The Church of Christ has again been established on the earth as foreseen by the Prophet Daniel, and it will stand forever.

I have defined our position on plural marriage time and time again and will not weary your readers with a repetition.

As to Rev. Joseph Cook, and his statements, I will say: We have over twenty thousand seventies, elders and priests in the "Mormon" Church and none of them receive compensation for their services, neither do any of our missionaries. As to these officers who work for nothing being a "greedy horde of cormorants," I leave the public to judge between them and the missionaries drawing fat salaries. Rev. J. Cook says, "A more industrious and patiently plodding people cannot be found on the globe. Their toil has made deserts green with meadows, golden with harvest, and bright with flowers." Common-sense should have taught him that such a community would not long stand bad leaders. All things in the "Mormon" Church are done by common consent, every officer is sustained by vote from one to four times each year in local and general conferences—men and women both voting.

Article thirteen of our Faith reads as follows:—"We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed we may say we follow the admonition of Paul, 'We believe all things, we hope all things, we have endured many things, and hope to be able to endure all things.' If there is anything virtuous, lovely, or of good report or praiseworthy, we seek after these things." Rev. Folk, D.D., a personal friend of your correspondent, has written a book entitled "The Mormon Monster," (Price \$2.00) in which he attempts to show that we do not live up to the principles of our belief as stated above. In refutation of all such falsehoods the testimonies of General Kane, Bishop Tuttle, Miles Grant, and others, all non-"Mormons," have already been published in the columns of the *Japan Mail*. In addition I give the following from a letter received from Col. Alexander G. Hawes, a personal friend of mine, who first became acquainted with the "Mormon" people over thirty years ago, and who has been in Salt Lake City, many times, residing there on one occasion for six months:

"London, April 23rd, 1896.

"My Dear Heber:—Your very nice long letter of the 10th, came duly to hand. Of course you know, aside from the long and intimate personal friendship we have had together, how much I have always been impressed with the genuineness and sincerity of the religious feeling among the men and women who hold your faith. Many times and oft I have said in conversation that the only religious people I ever knew who lived up to their professions were the "Mormons" of Utah. And this is true. This it is that inspires respect, even where there is a total absence of belief in the doctrines. Your people carry their beliefs into daily life and act as if they think there is something in them. If I had the belief to start with I cannot see how as a sensible person I could do otherwise. If there is anything in a belief which involves an eternity of future existence, there is everything."

I leave your readers to judge between the statements of Rev. Folk, at two dollars a volume, and those made by my non-"Mormon" friend, a Colonel in the United States army during the rebellion, and at the time of writing the above the General Manager for the United Kingdom of that great corporation the New York Life Insurance Co.

We have between 1700 and 1800 missionaries in all parts of the world preaching the gospel of Jesus Christ without money and without price. They are separated from their homes, their families, their friends, their business, and all that is near and dear

to the natural heart of man. There are nearly four hundred thousand people, members of the Church of Jesus Christ of Latter-day Saints, who notwithstanding their persecutions, their drivings, the opposition raised against them by their enemies, the killing of their Prophet and Patriarch, have remained firm and steadfast in the gospel of Jesus Christ. I ask my readers if the lives of these people do not impress them that there is something divine in a religion which inspires men and women to make such sacrifices with no earthly hope of reward?

In conclusion, I commend to all of our Christian critics the following verses from one of the Latter-day Saint hymns:

"Judge not, that you be not judged,
Was the counsel Jesus gave,
Measure given, large or grudging,
Just the same you must receive.

Jesus said, be meek and lowly,
For 'tis high to be a judge;
If I would be pure and holy,
I must love without a grudge.

It requires a constant labour,
All His precepts to obey;
If I truly love my neighbour,
I am in the narrow way.

Once I said unto another,
In thine eye there is a mote,
If thou art a friendly brother,
Hold, and let me pull it out.

But I could not see it fairly,
For my sight was very dim,
When I came to search more clearly
In mine eye there was a beam.

If I love my brother dearer,
And his mote I would erase,
Then the light should shine the clearer,
For the eye's a tender place."

Yours respectfully, HEBER J. GRANT.

THE UN-AMERICAN AMERICAN AND MORMONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On a bitterly controverted question a writer should either not write or else sign his name to what he writes. A name signed shows sincerity and begets confidence. Communications not properly signed by their authors might well be let pass; but the one in your issue of the 4th inst. deserves notice. In the interest, therefore, not of Mormonism, but of the cherished American spirit of liberty, I must call attention to a deadly thrust "An American Friend of Japan" has made at the very foundation of our freedom. It is in these words:—

"During a recent sojourn in the States, the telegraphic columns of the various dailies frequently told of incidents where outraged citizens in these and other sections gave notice to 'greedy hordes of cormorants, calling themselves bishops, elders and priests,' to use the language of the late Joseph Cook, that they must either move on, or they would be tarred and feathered. In one or two instances, I believe, this *heroic treatment* was administered and it need hardly be stated that, after this, when they received notice to quit they did not stay on the order of their going."

Evidently the writer of the above approves (as the words I have italicized evince) this species of lawlessness; and if the multitude of stringent laws which he would have devised defining all the minutiae of offences against morals and good order should be put in force, this statement alone would condemn him as one of the first offenders against these laws.

As strongly as I oppose both anarchism and Mormonism, I must say that your correspondent's views are a very defective antidote for them. I am, however, of opinion that a severer penalty should be imposed upon the one who attempts the life of a President of the United States; and also that the public preaching of anarchism should be declared a misdemeanour, and punishable in all States, as I think it may already be in some. Beyond this it would be a revival of the Inquisition.

Your correspondent says the Americans are a long-suffering people, and that the nation "carries its principles of liberty, sometimes, to an absurd extent. As witness the liberty of speech granted anarchists and the terrible fruitage that it has borne in the assassination of President McKinley."

This statement is just about as wide of the mark as it could be. I see a half dozen of the leading American Reviews, and this is the first time I have seen such an opinion expressed in print. Since the beginning of the American nation, now 125 years, there has been but one anarchistic murder! Does this show that American liberty is the kind of soil in which these evil weeds—foreign weeds—grow? How has it fared in Europe, the land of legal minutiae? Hardly a year passes without an anarchist or two trying to knock over a king, queen or dowager. A somewhat noted evangelist in the

U. S. in illustrating once the fruitful evil of a too minute code of laws, said he never went into a beautiful graveyard and saw posted on the road side the sign "keep off the grass," that he did not immediately feel an impulse to jump and spit, and then go on his way.

When you hear people, Mr. Editor, talking about eradicating this religious heresy by petty civil laws, or about keeping out moral evil by a legal technicality, you may set them down as very un-American and unprogressive. If the U.S. had adopted such a course the Roman Catholics would have been banished on account of their allegiance to the Pope and their mistaken views on civil government. But nothing of the kind was done; and events confirm the wisdom of the American principle; for the spirit of freedom has taken such deep root in the Catholic Church in the U.S. that it is with no little anxiety that the Pope views the liberal progress of his American brethren. There must be something lacking when public sentiment has ceased to guide the people in morals and religion. This is not yet the condition of the American nation.

Very truly,
Tokyo.

E. SNODGRASS.

THE BUFFALO EXPOSITION, WHY IT FAILED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Under "American Topics," in your issue of Dec. 5th, you note the fact that the Buffalo Exposition had closed with a deficit of \$4,000,000.

Why was this? In a time of unexampled prosperity, when, as a late writer has said, "the American people have money to burn," with an exposition situated in the immediate neighbourhood of America's greatest natural curiosity, why this heavy financial failure?

Other American expositions have paid expenses and some have made handsome profits, but none, as far as this writer is informed, has sunk anything like the sum mentioned above.

To my mind, an explanation, partial perhaps, is found in the fact that the exposition authorities defied the Christian sentiment of the land by keeping its doors open on Sunday, notwithstanding the very earnest protest of those in place and power, backed by multitudes in the lower ranks of life. As a result the Buffalo Exposition was largely boycotted. Instead of twenty or twenty-five million visitors, as was expected, it had but about one-third of that number.

As soon as the management made known its decision, the religious press and pulpit,—no mean factors in influencing American public sentiment—took up the subject and advised the people to stay away. Young people's societies, which now number millions of the very best the land has produced, such as the Christian Endeavour, the Epworth League, and the Baptist Young People's Union, denounced the action of the authorities and voted not to attend.

A few years ago, the Chicago Exposition managers voted to keep open doors on the Sabbath "for the benefit of the workmen" who, they claimed, could not attend during the week days. A trial of Sunday opening for only two or three times proved so disastrous to the Exposition exchequer, that notwithstanding their concern for the poor working men, they hastily reconsidered their action with the result that the big show thereafter ran but six days in the week.

The Centenary of the so-called "Louisiana Purchase" is to be celebrated in St. Louis, by a monster exposition in 1903. It promises to be the largest of the kind yet held. The business interests centering in St. Louis have subscribed \$10,000,000 and the national Congress has made an appropriation of \$5,000,000 conditional upon the closing of the exhibition on the Sabbath day. American sentiment demands Sunday closing and it is proving profitable financially.

American people believe that without a due observance of Sunday, there can be no true Christian morality and that, when that is wanting, its free institutions will be doomed; hence they are determined to guard the Sabbath, one of the bulwarks of their liberty.

Yours truly,
Osaka, December 7th, 1901.

AN AMERICAN.

A PITIFUL STORY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose you a copy of a private letter received from one of your subscribers describing the pitiable situation in which he found himself last Sunday a.m. in a sleet storm in the northern section of this, the main island, of Japan, and also for personal and general information to ask what steps should be taken to obtain redress under such circumstances. Who should be responsible for such lawless invasion and wanton destruction of property? The house in question stands in a large lot, quite isolated from

neighbouring buildings, save the church building in the same lot, but quite isolated from adjoining buildings. Have owners of buildings any rights in their defence and preservation from invasion by half-crazed, irresponsible Firemen? It were well for the man who turned the hose on a man so patient as he did, for had it been some other European he might not have escaped uninjured. Has the Government, or Fire Insurance Companies, any regulations on this subject? Any information will be gratefully received.

Yours sincerely,

HONEST INQUIRER.

[COPY.]

Awamori, Dec. 7th, 1901.

Your postal came to-day, but it is not to answer it that I now write, but to say that the ladies and myself are all well after a pretty bad fire scare.

Just after getting back from the evening meeting the chimney caught fire and the Japanese thought the roof was on fire and came rushing in and took possession of the house, despite my protest, and then proceeded to smash things generally and effectually.

I suppose there has been looting but till morning comes we cannot tell; they might have taken much more. They turned the hose on me, because I tried to stop the smashing, and get them to leave, and they tried to hustle me out but I would not go.

The little room I was staying in was unmoistened but for a little water near the door, when I think they were ducking me. I am now keeping the smashed-house, and the ladies are over in the Church rooms, with plenty to keep them warm. The Christians carried over a good many things.

The ceilings of two rooms, karakami, mats, a stove (?), lamps, &c., are all smashed and trampled down in mud and water. Repairs will be heavy, but as there was no fire there will be nothing to get from the insurance company.

8.40 a.m.

The storm is still blowing with sleet and it is a dreadful day to be out of house and home. We breakfasted in the kitchen, one of the good rooms.

Yours, &c.,

E. ROTHESAY MILLER.

THE HOUSE TAX AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is no reason to doubt that all parties concerned in this matter wish to do the just and honorable thing. But it is complicated. However, one surely cannot fail to see that the perpetual leaseholders are a peculiar class of Japanese subjects, so to speak; and for this very reason it would be, on general principles, quite unfair to apply the law in detail to their case. I understand from your remarks in the *Mail* of the 6th that you take the unequalled position that the house tax as imposed on leaseholders is reasonable and just. I know not what reply "Centaur" makes in the *Herald*, but I should like to call attention to one or two points in your editorial.

In reply to the supposition that the land rent or tax (for it is a tax in the legal sense of the term) included the house tax, you reply that if such was the understanding when the treaty was made one must then conclude that the Japanese Government is deliberately seeking to violate an agreement. Does such a conclusion logically follow? In view of the fact that no records of the deliberations are at hand and the parties have passed away, it is the easiest kind of a supposition to think that much was said at the time about what this high land-tax should include. What was the basis of the house tax in those early days? You say it was totally different from the present. You say that now it is absolutely independent of the land. If this be the vital distinction, then in the days of the treaties the house tax was *not* independent of the land; and it would not have been necessary to specify in the treaty that the house tax was included, since it was already related to the land. If this were the case, the present imposition of the house tax would not be really a breach of an agreement, but a conforming to new conditions; for now the house tax is, in your own terms, "absolutely independent of the land," whereas in treaty days it was not. It would be important to straighten out this phase of the subject. The Government must apply the law as it exists to-day, or else make an exception, as was done in the case of registering deeds immediately after the revision of the treaties. Unless this be done in the case of the house tax, it would seem that the leaseholders must pay one tax twice. What is the analysis of this land tax or rent?

Your point as to the tax on vehicles, horses, and incomes seems hardly relevant. These items are not associated with land values on which taxes are based. They give no value to land like houses do. And, moreover, it is not contended (at least by me) that the land tax included all "municipal, prefectural and imperial taxes" as these taxes are levied to-day. It could not include very logically a tax which did not exist at the time the treaty was made, as for example

the income tax. And the taxes on horses and vehicles could only be objectionable on the ground that they would be excessive if the present land tax is to remain unchanged.

Your objection to the argument that as the house tax was not levied before the new treaty the Government has no right to levy it now, is that the right to levy it *did* exist before, but that the *power* to collect it did not. I wonder if you considered well what such a statement implies. It implies a fixed supposition in the mind of the Japanese Government that the foreign Powers could not be trusted to do justice in a matter which was so palpably in favour of Japan. If the matter has become (or may become) an international question now, nothing stood in the way of its becoming one then. I do not think history records a case (except in the military overthrow of one Power by another) where one or more nations have cut off either directly or indirectly another nation's sole means of life. A government is essential to the existence of a nation; and taxation is essential to the existence of the government. Surely it cannot be said that the Powers by a forced treaty deprived Japan of her sole means of life—her various taxes—and in no way made compensation for them. If the case stands as you say, that the land tax does not include other taxes and there is no reason for supposing that it does include any other on your ground, nothing being stated to that effect, and that the Japanese Government had of old the right but not the power, then the foreign Powers have been guilty of the grossest injustice to a weaker nation. But if, on the other hand, the case stands as others suppose it does, that the land rate was estimated to compensate for other taxes, and that now the new treaties coming into force makes it necessary for all the laws to be applied to the leaseholders, then this imposition of the house tax is a necessary resolution of the land rent or tax into its component parts, so to speak; and no intention of injustice can be laid to the Japanese Government. They cannot change the land rent and neither could they very well devise a different rate of house taxation for the leaseholders. They must apply the law to all alike, or make an exception till it can be reformed; and this will involve a readjustment of the land rents which can only be made by international agreement.

If I understand correctly the latter part of your editorial, you say that roads, lights, drains and police service in the former settlements cost the Government more than the taxes received from these districts. Is this so? While I have not made any investigation as to the total income and expense relative to the settlements, yet as regards Tokyo I can hardly imagine that your statement would apply. Certainly leaseholders should not expect the Government to thus care for them at a dead expense. And is it possible that during all these years other parts of the empire have been heavily taxed in order to keep up the settlements? Probably I misunderstand you; for your last remark seems to grant that the settlements pay more into the Imperial Treasury than any other part of the country. If this be so, and yet the settlements are not self-supporting, there is indeed very little left for caring for other districts.

The distinction you draw between imperial land rent and a tax is one that, a party concerned is not likely to make, besides a good dictionary would not bear out the distinction.

There is another phase of the subject; but as it has not been introduced I shall pass it by. I am sure we should all be glad to know just what is to be expected; and that the Powers concerned wish to do the just thing in the matter no one need doubt.

Very truly,
Tokyo.

E. SNODGRASS.

(Both sides, we are persuaded, want to do the just thing.—Ed. J.M.)

A WONDERFUL LADY.

Mrs. Elizabeth Hanbury died at Richmond, Surrey, on October 31, aged 108 years and 144 days. She was the youngest child of Mr. John Sanderson, born at Armthorpe, Yorkshire, in 1749, and was herself born in Castle-street, London-wall, on June 9, 1793. Her father's warehouse was in St. Mary Axe, and he resided in Leadenhall-street, the house having a garden at the back in which were trees and a summer-house, where her father liked to walk enjoying the flowers. Mrs. Hanbury remembered the opening of the East India House in Leadenhall-street, long since pulled down. About 1800 the family removed to a roomy house in Old Jewry, and Mrs. Hanbury often spoke of her nurse frequently taking her for a walk in Moorfields, where Finsbury-circus now is, to see the cows milked. About 1816 she accompanied a sick brother to the Isle of Wight. At that time communication with the island was kept up by a sailing packet between

Southampton and Cowes twice or three times a week. When Mrs. Fry began to visit the prisoners in Newgate Mrs. Hanbury joined in the work, and thus began many years of untiring labour among prisoners. At this time the convict ships, especially those for women, were sent out with a disgraceful and scandalous disregard of proper and even decent arrangements for those whom they carried. Drink was plentifully supplied, and the demoralising influences were often ruinous to young offenders. The convicts proved willing to second the changes introduced and to obey a matron, to do useful needlework, and to be taught as in a school. An immense amount of good work was thus achieved. In 1826 she married Mr. Cornelius Hanbury, of the firm of Allen and Hanbury, chemists. Her son, the present Mr. Cornelius Hanbury, still directs the business of the firm, though he is over 80 years of age, and in 1900 celebrated his golden wedding. He is churchwarden of Holy Trinity, Richmond, but the deceased lady all her life remained a member of the Society of Friends. She took a deep interest in the various religious and benevolent objects which engaged the time and attention of her grand-daughters, two of whom became missionaries, one in connection with the China Island Mission, and the other with the Church of England Zenana Missionary Society. Her sight enabled her to read and write till she was over 100, and she daily dressed and went into her sitting-room till about the middle of her 107th year. During the next 12 months of her life, she remained free from any malady, but her weakness slowly increased. Mrs. Hanbury leaves numerous grandchildren and great-grandchildren, and among her near surviving relations may be mentioned her nephews, Sir Thomas Hanbury, of La Mortola, Vintimiglia, Italy, and Mr. Sylvanus Fox, of Wellington, Somerset; and cousin, Sir Thomas Henry Sanderson, Permanent Under-Secretary for Foreign Affairs, and Sir Percy K. Sanderson, Consul-General at New York.

A THANKSGIVING MEETING.

The following is the programme of the great thanksgiving meeting which is to be held in the Y.M.C.A. Hall, Kanda, on Saturday, the 14th inst. at 2 p.m., in commemoration of the twentieth century Union Evangelistic Movement. The Rev. H. Kozako will be in the chair:—

- 1.—Piano Voluntary, Mrs. D. C. Greene.
- 2.—Hymn No. 1
- 3.—Reading of Psalm, by Rev. S. Motoda, Ph. D.
- 4.—Opening Prayer, by the Chairman.
- 5.—Hymn No. 2
- 6.—Address, by Rev. Y. Honda, President of the Japan Evangelical Alliance
- 7.—Thanksgiving Poems, by Rev. M. Okuno and Mr. B. Inoue
- 8.—English Hymn, "The Ninety and Nine," by Missionaries
- 9.—Address, by Rev. J. D. Davis, D. D.
- 10.—Reports of "Taiko Dendo" as follow:
 - (1) Sapporo, Hokkaido District, Rev. J. Tanaka
 - (2) Hakodate, Hokkaido District, Rev. M. Yamaka
 - (3) Aomori, Tohoku District, Rev. H. Kobayashi
 - (4) Sendai, Tohoku District, Rev. M. Saito
- 11.—Hymn No. 3.
 - (5) Tokyo Headquarters, Kwanton District, Rev. K. Hoshino.
 - (6) Tokyo City, Kwanton District, Rev. T. Ukai.
 - (7) Yokohama, Kwanton District, Rev. H. Hirata.
 - (8) Gumma, Kwanton District, Rev. T. Hori.
 - (9) Saitama, Kwanton District, Rev. S. Tanaka.
 - (10) Kofu, Koshu District, Rev. Y. Hiraiwa.
 - (11) Matsumoto, Nanshu District, Rev. E. Aibara.
 - (12) Niigata, Hokuetsu District, Rev. S. Omiya.
 - (13) Kanazawa, Hokuriku District, Rev. K. Mori.
 - (14) Shizuoka, 1st Tokai District, Rev. H. Harano.
 - (15) Nagoya, 2nd Tokai District, Rev. M. Ogimi.
- 12.—Hymn No. 4.
 - (16) Osaka Headquarters, Kinki District, Rev. K. Miyagawa.
 - (17) Kyoto, Kinki District, Rev. J. Aburatani.
 - (18) Kobe, Kinki District, Rev. T. Harada.
 - (19) Okayama, Kinki District, J. H. Pettie, D.D.
 - (20) Matsuyama, Nankai District, Rev. S. L. Gulick.

- (21) Hiroshima, Sanyo District, Rev. Y. Eie.
 - (22) Matsuyama, Sanin District, Rev. B. F. Buxton.
 - (23) Saga, Kyushu District, Rev. A. Olmans.
 - (24) Nagasaki, Kyushu District, Rev. A. Segawa.
 - (25) Kagoshima, Kyushu District, Rev. S. Matsumoto.
 - (26) Taikoku, Formosa District, Rev. K. Kawai.
- 13.—Hymn No. 5.
 14.—Statistical Report of Forward Movement by Rev. Geo. Fukuda.
 15.—Thanksgiving Prayer by Rev. Y. Honda.
 16.—Doxology.
 17.—Benediction.

DASTARDLY MURDER BY FILIPINOS.

On Monday afternoon (says the *Manila Times* of the 27th ult.), news was received in Manila to the effect that Pandia Ralli, the well-known journalist and newspaper correspondent, of late operating as a prospector in Morong province, together with six of his native labourers, was massacred on the morning of the 20th Nov. in his prospecting camp on the Limutan river about thirteen miles north of Mavita. Mr. Ralli, in company with Mr. F. Emerson Hoar and Charles Muller, had three coal claims staked out in that immediate vicinity and lately had been at work surveying and making various improvements preparatory to commencing active operations. On Friday, the 15th Nov., Mr. Muller left camp with eight or ten natives to go over the mountain trail to Mavita for provisions for the camp. Ralli was left at the camp with seven natives to guard their belongings. Mr. Hoar was in Manila attending to some legal matters. Returning over the trail from Mavita, Muller was met by a native about seven miles from camp. This man's head was badly cut, his body showed several stabs, and several of his fingers were severed. The homicide proved to be one of the men left behind with Ralli, and he begged of Muller to turn back at once for fear of his life and those of the rest of the party. Muller rushed on, however, and arriving at the camp, found the wounded native's story to be only too true. Everything pointed to a furious struggle. Ralli lay where he had been finally struck down and his body was horribly mutilated. The native assistants had fought for their lives and no discrimination was shown them by the inhuman brutes who so successfully accomplished their designs. The native who escaped was stricken down at the very first and managed to crawl away and conceal himself in the river bed until the murderers had finished their work and left. Then he got up and struggled along the trail to meet Muller and warn him. The camp was burned and all marks of the claims were destroyed by the force which attacked Ralli. The surviving native is positive that there were fully forty native bolomen in the party that surprised the camp. Ordinarily a guard was kept at night about the camp; but this night it seems the usual vigilance had been relaxed, and men were literally butchered in their sleep. After burying the bodies of Ralli and the six natives Muller and his party went back over the trail to Mavita, arriving there late Sunday night. Mr. Muller left yesterday morning for Manila where he met Mr. Hoar and imparted to him his terrible story. Lieutenant De Witt, 20th Infantry, stationed at Siniloan, was notified by Mr. Muller and a detachment is out now on a scout for traces of the murderers. The news was late, however, for the trails are in terrible condition; and it is difficult to travel with any degree of speed. The gang of cut-throats who performed this latest deed were not insurgents. They were not people of that country, for three of the dead natives belonged there and together with many others of the same clan, have worked for these partners at various times. It is very evident to the surviving partners that the author of the attack had wholly in mind the destruction of the claims. They all three had been warned many times to keep away from those claims and not to venture into that country again, as their presence was not desired; and furthermore if they persisted in holding their claims or tried to work them, they would certainly be killed.

THE KAISER AND HIS NAVY.

A Berlin telegram of Nov. 18th said:—Emperor William to-day participated in the debate of the society of Naval Engineers on the subject of placing heavy guns on little ships and its effect upon their designs and construction. His Majesty referred to the influence of military requirements upon the development of ship construction and artillery, and pointed out how the aim of Germany had always been to allow the opinion of the officers who had to navigate ships to have as much weight and influence as the shipbuilder and the constructor. The Emperor illustrating his contention that tactical requirements influenced the construction of ships

of war, said the lines of the galleys were superior in this respect to later battleships. He instanced the battle of Lepanto as the greatest wherein galleys had been engaged, and said Don Juan of Austria had brought his galleys into action in half moon formation, and had destroyed the enemy's fleet by the superiority of their bow fire.

Germany was the first nation able to place a captain still on the active list at the head of the construction bureau. He believed that the types of vessels now being launched in German yards also represented the very best needed for the purposes of the country or that could be demanded from the splendid constructors and magnificent yards of Germany.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE NICARAGUA CANAL.

Shanghai, December 6.
 The report of the United States Canal Commission favours the Nicaragua route, the Canal taking eight years to construct and costing a hundred and ninety million dollars. At the same time the commissioners admit the many advantages of the Panama route.

THE NETHERLANDS SCANDAL.

Later.
 Prince Henry has returned to The Hague and his relations with the Queen have been resumed.

SOUTH AFRICA.

Three laagers were surprised and 250 Boers captured in the Transvaal yesterday.

MARQUIS ITO.

Shanghai, Dec 7.
 Marquis Ito has left St. Petersburg.

THE ISTHMIAN CANAL.

The Hay-Pauncefote Treaty has been published. It provides for the construction of a canal by, or under, the auspices of the United States, which is given all rights incident to such construction, exclusive of the right of management. It further provides for the free and equal navigation of the canal by the merchantmen and warships of all nations, similar to the regulations of the Suez Canal. No mention is made about fortifications.

FRENCH (INDEMNITY) LOAN.

Shanghai, Dec. 10.

A telegram of Dec. 7th says that the French Senate has passed the Chinese Loan Bill.

THE HAY-PAUNCEFOTE TREATY.

The Foreign Affairs Committee of the American Senate has reported favourably on the Hay-Pauncefote Treaty.

MARQUIS ITO.

Marquis Ito has arrived at Berlin.

AUSTRALIAN IMMIGRATION.

The Melbourne Senate has passed the Alien Immigration Restriction Bill.

THE WAR DEATH LIST.

The total number of British losses by death since the war began is 18,347, including 893 officers.

RENEWED BOER ACTIVITY.

A telegram of Dec. 8th states that there is a recrudescence of Boer activity under Botha in the Transvaal and Dewet in Orange River Colony.

GERMAN BUDGET DEFICIT.

The German Budget shows a deficit amounting to thirty-five million marks.

RUSSO-JAPANESE STEAM COMMUNICATION.

It is stated at St. Petersburg that the Japanese Government has concluded negotiations with Russia by which the former provides for the opening of a regular steamship service between Tsuruga and Vladivostock.

BOTHAS.

Later.

A telegram dated Dec. 9th says that Botha with 1,500 Boers was on the north of Ermelo.

RUSSIA AND THE GERMAN TARIFF.

Russia threatens a retaliatory tariff if the German tariff is passed in its present form.

FRIENDLY BOERS INCREASING.

The number of Boers taking arms against the enemy in the field shows a notable increase.

DE WET.

A later telegram to the *Times* from Pretoria dated the 9th says that De Wet is in command of 1,000 men to the south of Heilbron.

BOERS IN TRANSVAAL.

The Boers in the Transvaal are endeavouring to go north.

MORE BLOCKHOUSES.

Attacks on the railway are frequent, and it has been found necessary to build blockhouses at every 600 yards, connected by wire entanglements, blockhouses a mile apart being powerless.

WILL NOT SUPPORT HOLLAND.

The *Standard's* correspondent at Brussels says that the Powers have declined Holland's request to support her demand for bringing the Boer refugees to Holland.

THE ATTEMPTED BOYCOTT.

Shanghai, Dec. 11th.

A telegram from London dated Dec. 10th says the Dutch dockers have finally abandoned their scheme aiming at an international boycott of British shipping by foreigners. Many Dutch refused to join.

WARWICKSHIRES FOR THE CAPE.

The Fifth Battalion of the Warwickshires, nearly 900 strong, leaves on Dec. 16th for the Cape.

THE NICARAGUA CANAL.

Nicaragua has concluded a treaty with the United States, leasing to the latter in perpetuity a strip six miles broad covering the route of the Canal.

BOER COMMANDANT WOUNDED.

Later.

On Dec. 11th Commandant Maritz was severely wounded in an unsuccessful attack on TontlvoschKop(?), at the extremity of Cape Colony.

PASSENGER RATES FOR THE CORONATION.

At a meeting of the P. and O. Company the Chairman announced that return tickets, lasting two years, for a fare and a half, would be issued, which would be a great boon in the coronation year.

(This part of the message is somewhat obscure.—Ed. J.M.)

MARITZ OPERATING.

Shanghai, Dec. 12.

A telegram of Dec. 11th says that Maritz with a strong force twice attacked a garrison of twenty holding a grain depot to the north of Calvinia between the 27th and the 4th, after which he abandoned the attempt. The Boer casualties were 16.

FRESH TROOPS FOR THE CAPE.

A *Daily Mail* correspondent says that the departure of fresh troops for the Cape on a large scale will commence shortly.

A NIGHT SURPRISE.

It was reported on Dec. 12th that General Bruce Hamilton's column after a night march surprised and captured practically the whole of Bethel's commando. Seven Boers were killed and 131 taken prisoner.

BOTHAS.

Louis Botha, with a large commando, is reported to be on the north of Vryheid.

MARQUIS ITO.

Count von Richthoven has banquetted Marquis Ito.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE CHINESE INDEMNITY LOAN.

Saigon, Dec. 8.

The Senate, after a short debate, adopted by 224 votes to 93 the project of a Chinese loan as passed by the Chamber.

(This is a loan floated by the French Government on the security of the Chinese Indemnity bonds.—Ed. J.M.)

THE FRENCH BUDGET.

Saigon, Dec. 11.

The Chamber by 436 to 125 votes has passed the project of mercantile marine law. During the discussion of the Budget M. Caillaux explained that the Budget deficit for 1901 had been caused by the law upon drawbacks and premiums but that the credit of France remains intact. The Chamber authorised *affichage* of the speech of the Minister of Finance.

TROUBLE AT TIENTSIN.

There has been a riot at Tientsin between German and Indian soldiers.

THE BUDGET.

Saigon, Dec. 12.

The Chamber has terminated the general discussion of the Budget.

(SPECIAL TO THE "JAPAN MAIL.")

LARGE FIRE IN HYOGO.

Kobe, 5.53 p.m., Dec. 11.

A large fire occurred at Hyogo this forenoon in the Riosinsha match factory. Two women were burned to death, and three were injured. The area devastated extended to two hundred *tsubo*. The loss is estimated at *yen* 20,000. The buildings were insured in the Tokyo Fire Insurance Company.

(FROM THE "N.-C. DAILY NEWS.")

FIRE ON THE "CHUNGKING."

Chefoo, Dec. 4.

The fire on the *Chungking* started in the between-decks forward at 10 a.m. yesterday, and is still burning, but is under control. The forepart of the vessel is gutted.

The crews of the American, Chinese, and Japanese men-of-war in port went to her assistance yesterday.

No casualties are reported.

(FROM "DER OSTASIATISCHE LLOYD.")

EXCLUSION OF CHINESE FROM THE UNITED STATES.

Berlin, Nov. 29.

The Government of the United States of North America intend to lay before Congress a bill through which the prohibition of Chinese immigration into the United States will be prolonged.

GERMAN SHARE OF THE INDEMNITY.

Berlin, Nov. 30.

The German Budget for 1902 contains, under the heading of Income, the first payment of the Chinese War indemnity, amounting to 17,504,824 marks. Therefrom 13,424,644 marks will go to satisfy the private claims, which amount can, if found necessary later on, be raised to 15,000,000 marks (£750,000).

NEWS FROM EUROPE.

Berlin, Dec. 4.

The rebels in Colombia have surrendered. Order has been restored throughout the country. German interests have not been threatened by the revolution.

THE GERMAN TARIFF.

Berlin, Dec. 2.

The German Reichstag has taken up the debates of the New Tariff Bill. The Imperial Chancellor, Count Billow, stated in his address, that the bill was an endeavour to compensate the different interests. It has received the consent of the Governments of the Allied States, as it meets the requirements of Germany's political economy. Especially it tends to a higher protection of the farming interests and to a furthering of the export industry, which would give better opportunities to the Government than the present tariff for the signing of new treaties with other Powers. The Secretary of the Treasury, Baron Thielmann, discussed later the necessity of new commercial treaties.

COST OF GERMAN OCCUPATION.

The Budget provides 25 million marks for maintaining the German occupation brigade in China.

EXCLUSION IN SOUTH AFRICA.

The entering of Cape Colony and Natal is now permitted exclusively to those holding a special permit, which, however, can be obtained only with great difficulty.

PLAGUE IN TURKEY.

The Port of Constantinople has been declared to be infested by plague.

RIOT AT GOA.

In Portuguese Goa riots have taken place, but order has now been restored by the Government.

GERMAN SHARE OF INDEMNITY.

Berlin, Dec. 3.

According to the memorial accompanying the German Budget, Germany will receive from China an indemnity of 99 million taels, whereof 85 millions will be paid for the expedition which Germany undertook in good-will to assist the Chinese Government in maintaining order in China.

GARRISONS IN CHINA.

The Powers consider it inopportune to entirely withdraw their troops from China. Germany intends for this reason to maintain small garrisons both in the Province of Chihli and in Shanghai, which on the one hand will further the consolidation of the situation and on the other render it possible to exercise a pressure upon the Chinese officials when necessary.

REPORTS.

The American steamer *Victoria*, Captain John Pantan, reports:—Left Victoria, B.C., on Nov. 21st, and encountered in Long. 132° W. strong gale from S.W. lasting over 30 hours, from there had moderate northerly and westerly winds until Long. E. 163° when the ship ran into a whole gale from S.S.E. hauling next day to W. by N. with furious seas and frequent hail and snow storms. In Long. E. 150° to Long. E. 145° encountered another whole gale from South to West lasting for nearly 3 days with tremendous high seas and much snow, thereafter had fine weather to Yokohama.

YOKOHAMA: SATURDAY, DECEMBER 21ST, 1901.

BIRTH.

On the 16th inst., at No. 89-B, Bluff, the wife of E. W. TOWNEND, of a Son.

DEATHS.

On the 15th inst. at 7 p.m., HENRY GARIBALDI WAGGOTT, eldest son of W. WAGGOTT, of Kobe, at Rokkaku's Hospital, age 27 years.

At Nagasaki, on the 17th instant, GEORGE E. RICE, late of Yokohama.

At his residence, Shiocho, No. 17, Ichhome, Yotsuya, Tokyo, on the 18th instant at 1 p.m., Mr. EDWARD HOWARD HOUSE, in his sixty-fifth year.

SUMMARY OF NEWS.

NOVEMBER returns show a decrease of six hundred thousand tons in the export of British coal.

A NAGASAKI message says that on Dec. 17th three Russian sailors were sentenced to major confinement for six months by the Nagasaki Local Court.

THE German Emperor despatched a magnificent birthday present to his uncle, the King. It consisted of a table service of silver. It filled eight cases.

SOME rails turned out by the Wakamatsu Iron Foundry were recently forwarded to the Department of Agriculture and Commerce, and the

authorities were asked to place them in the Sample Museum attached to the Department for public inspection.

VENEZUELA was reported in London on Dec. 10th to be uneasy concerning possible German action at Laguayra (near Caracas). President Castro threatened to declare free trade.

THE *Tokyo Asahi* has a telegram from Matsuyama that at a special general meeting of the Iyo Steamship Company held on Dec. 15th a resolution was passed to wind-up the concern.

ADMIRAL of the Fleet Sir H. Keppel is at present in Singapore. It is understood that the octogenarian Admiral on arrival in the Far East received a telegram from King Edward enquiring after his health.

AN omnibus service between Kameno-hashi, Yokohama, and Hiranuma station was opened for traffic on Dec. 15th. The route is divided into four sections, the fee being two *sen* per passenger per section.

On the afternoon of Dec. 12th, while two fishermen of Kamakura, named Aoyagi Kametaro and Negishi Kyushichi, were engaged in fishing off Eno-shima they netted 61 copper sheathed boards each measuring a little over ten feet. The matter was reported to the local police.

A CARGO boat of the Nippon Yusen Kaisha with a load of 410 casks of *seishu* or refined liquor, which started on Dec. 17th from Yokohama for Tokyo, towed by a steam launch, sprang a leak about three o'clock in the afternoon and foundered off Haneda losing 370 casks out of the 410 on board.

GRADUATION exercises at the Naval College, Edajima, were conducted on Dec. 14th in the presence of H. I. H. Vice Admiral Prince Arisugawa who represented the Emperor on the occasion. The graduates numbered 125. Three of the successful students received each a field glass as an Imperial present.

THE following telegram was translated by the *Kobe Herald* on Dec. 12th from an Osaka paper: The general opinion is that the American Cotton Bureau has miscalculated the estimate of the cotton crop, to the extent of a million bales. Neill holds to his original figures. The market price is still diminishing.

CONCERNING the tenders invited at Manila for the building of gun-boats for the United States, the *Jiji's* Kobe correspondent reports to his paper under date of Dec. 14th that the Ishikawajima, Mitsubishi and Uruga Shipbuilding Companies have secured contracts, while the Kawasaki Dock Company and the Osaka Iron Works have failed.

THE time-ball on the Bund, Yokohama, has been for some time the subject of conversation among foreign residents and nautical people in this port because of its never having been put in working order. It is understood, however, that the defect in its construction will be amended and that the ball will work about February next.

THE other day the citizens of Moji petitioned the Governor of Fukuoka prefecture asking that a representation be made to the Government with a view to including the port Tonoura within the sphere of Moji harbour. A bill relating to the above proposal, together with a bill relative to the navigation of Moji straits, passed the House of Representatives in its 14th session.

A REPORT from the Japanese Consul in Foochow, under date of Dec. 4th, says in effect that the quarantine restrictions enforced at Foochow

against vessels coming from Amoy, Hongkong, and Swatow have been cancelled since the 31st of October, but that the importation of rags, waste paper, corpses, etc., from those ports is still prohibited. The report adds that a similar condition has been adopted at Newchwang.

ACCORDING to investigations made by the Communications Department the total number of depositors in the Post Office Savings Banks throughout the country is 1,983,791, including 629,345 farmers, 224,679 merchants, 94,078 persons engaged in miscellaneous occupations, 73,388 workmen, 98,984 officers and officials, 246,184 school boys and girls, 22,548 fishermen and seamen, and 40,081 persons having no profession, etc.

LAST Saturday, Baron Senge, Governor of Tokyo, left his residence in a *jinrikisha* for the purpose of attending the ceremony of opening a primary school in one of the suburbs of the Capital. Near Ueno Station the vehicle came into violent contact with a tramcar, with the result that the Baron was thrown out, severely injuring his head and left ear. The Governor was attended by a physician near by and then taken to his home.

WITH a view to effect radical reforms in the dyeing industry in Japan, which is still in its infancy, the Government has resolved to purchase abroad some 118 sets of machinery for the purpose at an estimated cost of *yen* 100,400, provided that the measure is approved by the Diet. It is understood that the machinery, when it arrives, will be rented to dyeing establishments in the interior on certain conditions.

THE International Oil Company of Echigo province, which commenced business on the 16th of last November, is reported to have effected a compromise with the Abe, Masuda and Kuwabara establishments in Yokohama, by which arrangement the latter body are authorized to undertake the exploitation of the "International" brand oil throughout the country. The Japanese concerns referred to are agents for the Standard Oil Company.

WITH regard to the new station at Hiranuma, the members of the Yokohama Japanese Chamber of Commerce have decided to submit a representation to the Government shortly. According to the representation, they urge that it is necessary that rails should be laid between Yokohama and Hiranuma to establish communications with through trains. In addition there should be two return services between Yokohama and Hodo-gaya, one in the morning and the other in the evening.

WITH regard to the proposed opening of a line of steamers between Vladivostok and Tsuruga in January next, as already announced by Reuter, the *Tokyo Asahi* has a paragraph to the effect that according to a contract made between the East Asia Railway Company and the Home Office it is provided that the latter authorities will have to supply to the Russian concern a number of Japanese seamen for a period of ten years commencing on the 1st of January next, the sphere of service extending as far as Behring and Okhotsk seas.

MR. IKARIYAMA, the popular Chief of the Kagacho Police Station, was ordered on Wednesday to take charge of the Bluff Police Station in addition to his present post, owing to the transfer of Mr. Okada, Chief of the Bluff Station, to the Foreign Affairs Bureau in Kanagawa Prefectural Office. We need scarcely say that foreign residents on the Bluff, will be very much pleased in having Mr. Ikariyama again as the Chief of the Bluff Station, where he had charge several years ago.

POLITICAL NOTES.

Saturday, Dec. 14.

Deliberations are being carried on by the *Seiyun-kai* leaders with regard to the Budget. The results are not yet published, but it is understood that the programme will be to insist upon the transfer of the Chinese Indemnity to a special account, and to oppose the defraying of State enterprise expenses out of general revenue. Also the Party will decline to sanction any new undertakings or any increase of official salaries until financial and administrative reforms are carried out. It must be explained that this programme has not yet received the approval of the majority. Some important members of the *Seiyun-kai* are inclined to endorse the Government's plan of carrying the Chinese Indemnity to the general account. Our own information goes to show that the Budget will be passed as presented by the Government with slight changes.

Monday, Dec. 16.

It is evident that the *Seiyun-kai* leaders are strongly inclined to reject the Government's financial programme. All the efforts made by Mr. Inouye Kakugoro and his fellow-thinkers to induce a more placable mood appear to have failed, and if the temper of the Party may be judged from the tone of the questions addressed by its representatives on the Budget Committee to the Ministers of State and the Government Delegates, the public is likely to see another political crisis.

The Committee sat until 3 p.m. on the 13th instant and devoted most of its time to the process of questioning; a generally unsatisfactory process, the questions being purposely framed so as to embarrass the persons to whom they are addressed, and the upshot being in the majority of cases that the questioners declare themselves unsatisfied. The Committee came to the conclusion that the presence of the Minister President and of the Minister of State for Foreign Affairs was necessary. Such conclusions always mean fighting.

On the other hand, it appears that the Minister of Finance has not made a success in his manner of replying to the queries addressed to him. Regarding them probably as frivolous—which they doubtless are in many instances—he has put them aside curtly and even contemptuously, and his demeanour is said to have offended not only his opponents, who were prepared to be offended, but also neutrals who were not unwilling to be amicable. Nothing, as we have often said, is more defective in the procedure of the Japanese Diet than the arrangement which places Ministers of State in the witness-box to be cross-examined and badgered by their political antagonists.

The theoretical objection of the *Seiyun-kai* is that the Chinese Indemnity, being receivable by annual installments spread over a number of years, can not properly be regarded as an asset wholly available for the purposes of one year's budget. They take the view that it should be treated in a special account, and that no part of it should be appropriated until it is received.

There is, of course, some reason on the side of the *Seiyun-kai*, but it is a sentimental rather than a practical reason. Not many Powers, we imagine, will treat their share of the Indemnity as the *Seiyun-kai* proposes that Japan should treat hers. France has already

decided to raise a loan on the security of the bonds handed to her, and to carry the whole of the proceeds to the credit of the ordinary revenue, in order to make up a deficit due to exceptional causes. She is doing, in short, precisely what the *Seiyun-kai* leaders denounce as unsound and improper. Yet where France leads, Japan should be safe in following without compunction.

The question of prime interest and moment is, supposing that the Indemnity be treated as the *Seiyun-kai* advises, how are the accounts to be balanced? It has too often been the habit of political parties in Japan to pursue a programme of destructive opposition, content if they can create an *impasse* for the Government, and careless of their own responsibility to erect some building on the ruins of the one destroyed. That fault can not be charged against the *Seiyun-kai* on the present occasion. They have a definite plan which admits of easy statement. Put briefly, the Government's programme is this. The exceptional charges to be defrayed next year are 20½ million *yen* for restoring the Naval Fund which was drawn upon for the purposes of the Chinese campaign; 6 million *yen* on account of a debt already incurred for the purposes of the same campaign; 2½ millions for the maintenance of troops in Chili, and 17 million *yen* on account of State enterprises; a total of 46 millions. Now the only certainly available asset is 20 million *yen* derived from increased taxation. The Government therefore proposes to absorb the 38 millions obtainable by selling to the Deposit Bureau the Chinese bonds—face value, 45 millions, selling price, 80—, and this asset being added to the proceeds of increased taxation, gives a total of 58 million. Deducting from this the above aggregate of liabilities—46 millions—there remains some 12 millions which are to be used in redeeming the national debt.

It will be apparent that the Government has certain aims in view. First, it desires to make the prosecution of the State enterprises independent of such a precarious source of funds as domestic loans. These enterprises are railways, telegraphs and other works of a wealth-earning character. Secondly, it wishes to establish the firm fact that there shall be no issues of loan bonds next year, since the constant expectation of such issues tends to depress the market. Thirdly, it desires to devote a substantial sum to the redemption of its securities by the method of lot, as originally provided by law, since the present method of purchase at the lowest rate ruling in the market is unfair to the banks and individuals who subscribed for the bonds in the first place, and has also the effect of causing depreciation.

With these aims the *Seiyun-kai* leaders evidently sympathise, in part at any rate. They are willing that the State's productive enterprises shall be carried on with funds obtained from surplus revenue. But they join issue with the Government as to the form in which the Naval Capital Fund should be restored. The Cabinet's method, they say, when carefully considered, amounts to this, that the Fund will be restored with Chinese Indemnity Bonds. But if the Deposit Bureau has money to buy Chinese bonds, which are an asset not immediately realisable, why should it not buy Japanese bonds instead? Why not restore the Naval Fund with Japanese bonds, and place the Chinese securities in a special account, to be collected gradually as they fall due? That plan would have the advantages of closer ad-

herence to the original *post-bellum* programme as mapped out by law, and of not attempting to deal in one operation with an asset which does not properly mature for a long term of years and by gradual operation.

It will be seen that the question is purely one of form. Certainly there are no grounds for a parliamentary dead-lock, which would tend to deepen the impression already produced publicly by the obstructiveness of Japanese political parties, namely, that the finances of this country are falling into more and more irretrievable disorder.

The test question of the hour is the Diet's attitude towards a Government bill for discharging the outlays on account of railway construction from the surplus revenue. Mr. Sakatani, Vice-Minister of Finance, when questioned by the Budget Committee on the 13th instant, said that if the House rejected the Bill, the only course open to the Government would be to suspend either the building of railways or the operation of the sinking fund. Asked whether the Cabinet would not be disposed to follow an alternative route if a good one could be pointed out, he said that the Government, having given the matter the fullest consideration, did not think it likely that any better plan could be devised.

The Budget Committee met again on the 14th instant at 1 p.m., Mr. Komura, Minister of Foreign Affairs, and the Minister President of State being present. In answer to questions, Mr. Komura explained that the total Chinese Indemnity of 450 million taels was intended to cover claims preferred by States and claims preferred by private individuals. The amount of the former had already been determined, but the amount of the latter was still uncertain, and should it prove larger than was at present anticipated, a *pro-rata* reduction would be made in the sums payable to each State as well as in the sums payable to individuals. According to present appearances, however, the latter contingency would not arise. His Excellency further explained that the original Japanese demand had been made on a basis of five-per-cent, but that as the Powers had afterwards agreed to put the Indemnity bonds on a 4 per cent. basis, the Japanese Government had preferred a supplementary demand for 7½ million *yen*.

Various questions were put to the Prime Minister as to whether any change in the railway system would be necessary now that the allocation of the various Divisions had been completed; whether military expenditures might be reduced by shortening from 3 years to 2 the period of military service, or increasing the number of conscripts allowed to return home before the expiration of their term; and what were the Government's ideas as to administrative and financial reform. Viscount Katsura was of course unable to make definite replies to these questions, as the subjects concerned were of great importance and had not yet been decided. He said, however, that a first step in administrative reform might be traced in the Budget now before the House. Mr. Sakatani subsequently explained with reference to the latter point that the reform was shown in a reduction of the fixed expenditures. In order to increase the pay of officials the former Cabinet would have required an additional revenue of 5 million *yen* from taxation, whereas the present project was to reduce the number of *hannin* officials by 8,000 and to apply the saving of 2,200,000 *yen* thus effected to augmenting the salaries

of the remaining *kannin* officials by 20 per cent in the case of the Central Government and over 20 per cent. in the case of local Governments.

Mr. Sakatani farther explained in answer to questions, that it was impossible to say definitely whether a sum might not have to be carried to next year's accounts in connexion with uncompleted public works, as had been the case last year. The Government preferred that such things should not occur, but strikes and other unforeseen incidents might always upset calculations.

Up to this moment of going to press the attitude of the *Seiyu-kai* towards the Budget is uncertain, nor is it likely to be definitely fixed for three or four days longer. Many rumours are circulated, one pointing to the dissolution of the Lower House, which would mean a loss of a thousand *yen* to each member, and another forecasting a split in the ranks of the big party, followed by the amalgamation of the Leaders with the Progressists and the *Sansei*-Club. But all these things are the purest conjectures. It is known that in response to a message from Count Inouye, Marquis Ito despatched a telegram to the head-quarters of the Party, indicating the advisability of refraining from radical opposition to the Cabinet, but the terms of the telegram were not sufficiently explicit to offer a certain basis for forecasting the policy of the Party.

Meanwhile the *Seiyu-kai* have formulated their programme of administrative reform, a fact upon which they are greatly to be congratulated, for the trouble in the past has been that while every body was calling out for financial or administrative reforms, nobody seemed able or willing to define his interpretation of the word "reform." The principal points of the programme are, first, that the staff of officials should be reduced, and that uniformity of official practice should be introduced. As to the former point, the document shows that whereas there were 46,000 officials—Army and Navy excluded—in 1894, the number grew to 70,000 in 1898 and to 80,000 in 1900. It is conceded that as the State's business increases, so also must the number of officials, but the *Seiyu-kai* leaders find these figures excessive.

They next claim that the power of local governments must be increased; that the administrative system must be better defined; that the abuse of centralization of authority should be corrected; that whatever matters can be managed by the localities should be transferred to their care, and that the special offices of the Central Government now established in the prefectures ought to be abolished; all which changes would tend to a great augmentation of efficiency with a large reduction in the official establishment and in its expenses.

Another point insisted on is the adoption of measures to expedite the discharge of judicial business; such measures being a modification of the collegiate system and an extension of the jurisdiction of district courts.

There are also proposals with regard to the Army and the Navy, but they are somewhat vague, the only definite suggestions being that works now carried on by those Departments direct, should, as far as possible, be transferred to private firms, and that there should be amalgamation and co-operation wherever feasible.

The programme further advocates a general sifting of officials, with a view to weeding out the bad and promoting the good, and a contemporaneous increase of salaries.

Another point is the revision of the innumerable petty regulations, and the abbreviation of troublesome procedure that serves now merely to impede, instead of expediting public business.

Finally, the leaders of the Party suggest a modification of the present regulations for the appointment and promotion of officials (*bunkan bungen-rei*), the object of the modification being to facilitate the employment and advance of competent men without reference to their qualifications to pass an examination or as to the time of their service.

Tuesday, Dec. 17.

On the whole the tendency of the *Seiyu-kai* is towards opposition. There is a moderate section led by Mr. Inouye Kakugoro, but its members have evidently concluded that it would be fruitless to maintain an attitude of dissent towards more than one of the proposals advocated by the Party. That exception is a resolution that no necessity exists for defraying the cost of public works out of ordinary revenue. At the last meeting of the *Seiyu-kai* council Mr. Inouye and his friends vehemently traversed that contention, and the discussion grew so hot—the other side being led by Mr. Ozaki Yukio—that Mr. Inouye finally withdrew. The resolution was therefore put aside, and its ultimate fate remains in abeyance. But the Council unanimously agreed, first, that the funds received from the Chinese Indemnity should be placed in a special account; secondly, that the capital funds must be restored; thirdly, that the law for purchasing public bonds in the open market by way of redeeming the national debt must be abolished, and fourthly, that the Budget must be compiled on the basis of administrative and financial reform.

It is plain that these resolutions if adhered to in the Diet, as they probably will be, mean the rejection of the Budget, for the latter is compiled on the basis of drafting the Chinese Indemnity into the general revenue, and further, the Cabinet can not see its way to undertaking any further scheme of reforms pending the passage of the budget. It is possible that a compromise of some kind may be effected, the *Seiyu-kai* not being anxious, it is said, to push matters to an extremity. But inasmuch as the use of the Indemnity to balance the accounts, instead of issuing a further batch of loan bonds, is a cardinal feature of the Government's programme, the outlook can not be called hopeful at present.

Where a desire to oppose exists, reasons for opposition are not difficult to find. In the present case two proximate causes are assigned: one is that the explanations of the Minister of Finance have been found unsatisfactory; the other that, as stated by the Minister of Foreign Affairs, the amount of private claims to be paid out of the total Indemnity handed by China to foreign Powers has not yet been definitely fixed, so that Japan's share can not be regarded as an asset of fixed amount. These two points are obviously trivial and even frivolous. If the *Seiyu-kai* are genuinely anxious to assist the smooth management of the country's financial affairs, they will consider facts and figures, not the phraseology or the manners of a particular Minister; and if they honestly attach importance to Mr. Komura's statement, they must be

aware that he pointed out the insignificance of the sum affected by any private claims still remaining to be satisfied. It really seems quite unreasonable to allege that the portion of the Indemnity coming to Japan can not be regarded as a fixed asset inasmuch as it may still undergo a small fractional *pro rata* diminution on account of unsatisfied private claims. That factor of uncertainty in the case of the Indemnity is not as large as the possible fluctuations in market value of the domestic loan bonds that the *Seiyu-kai* propose to sell to the Deposit Bureau.

The Progressists have resolved to withhold their consent from the project of a steel-plate factory at Kure. They will vote, however, for the building of barracks in Formosa; for the works of communication contemplated at Yokohama and Kobe; and for a small increase of official salaries. As for the Government's educational measures, the Party will allow its members to vote independently.

Wednesday, Dec. 18.

The general meeting of the *Seiyu-kai*, held on the 16th instant, made it plain that the Party is determined to assume an attitude of hostility to the Cabinet. A resolution was unanimously passed endorsing the programme suggested by the Party's Council. We need not weary our readers with unessential details. The salient facts are that the *Seiyu-kai* will vote against all new enterprises except those regarded as absolutely necessary; that it will vote against all increase of salaries, except those regarded as absolutely necessary; and that it will vote against the drafting of the Chinese Indemnity into the general revenue for next year. This last is, of course, the cardinal point. If the House refuses to sanction new undertakings, or to permit increases of salary, the Cabinet must only bow to that decision. Such undertakings and such increases may seem advisable, but if the people's representatives decline to vote funds, there is an end of the matter. The treatment of the Chinese Indemnity, however, involves the question whether domestic loan bonds shall or shall not be issued, and it seems probable that the Cabinet will not agree to have its opinion set aside in that respect. In point of fact, the difference of views has no practical significance. The *Seiyu-kai* leaders profess to be anxious to restore the Naval Capital Fund with ready money, but that is impossible whether the Chinese Indemnity bonds or domestic loan bonds become the ultimate security. The whole trouble resolves itself into this: that the *Seiyu-kai* leaders are resolved to assert themselves, and that the most effective manner of doing so is through the instrumentality of the Budget.

People are naturally asking, will either side give way, or must it end in dissolution of the Lower House or resignation of the Cabinet. It is impossible to answer that question at present. We can not offer any definite opinion. The *Seiyu-kai*, at the instance of Mr. Inouye Kakugoro, has already made one concession: it has postponed formulating any decision as to the propriety of defraying the cost of public works out of ordinary revenue. That is an important concession, indicating a mood not wholly implacable. There are rumours that certain members of the House of Peers are endeavouring to make arrangements that each side shall send members to form a council which will prepare a scheme modified so as to satisfy both. If that were possible, it would certainly be the most sensible course.

Meanwhile the Budget Committee continues its deliberations. On the 16th instant it passed from questions relating to the General Budget to questions concerning each section. In the Finance Department's section the Government delegate explained that the reduction of appropriations on account of State enterprises would affect mainly telephones, railways and Formosan undertakings. In the War Department questions were put about looting in the Chinese campaign, but the Government asked that the matter should be discussed *in camera*. The result is not accurately known, but it is supposed that the conclusions arrived at were that the total value of the official loot was some 4 or 5 million yen; that the accusations of looting preferred against individual officers were not wholly without foundation, and that due steps had already been taken to deal with such cases. The Minister of War is understood to have explained that the proceeds of the official loot were included in the miscellaneous receipts shown in the section of Extraordinary Revenue.

The Minister of State for Justice explained that a bill for amending the judicial organization would be presented in this session of the Diet. It would provide for a certain change of the collegiate system; for the transfer of light cases from the local to the district courts, and for the hearing of appeals from district courts by the Court of Cassation, in order to secure uniformity. The Government further proposed to make bailiffs salaried officials, instead of letting them obtain their emoluments from fees as at present.

Thursday, Dec. 18.

There is no improvement in the political situation. On the contrary the hands of the *Seiyun-kai* have been strengthened by the accession of the *Sanshi* Club. The latter's resolutions with regard to the Budget are identical with those of the *Seiyun-kai*, except that whereas the *Seiyun-kai* leaders confine themselves to declaring that the Chinese Indemnity must be placed in a separate account, the *Sanshi* Club insist that it must be devoted to Far-Eastern purposes (*Toyo no keiyai*). We do not pretend to know exactly what is intended by "Far-Eastern purposes," but the vagueness of the phrase suggests a suspicion that to be more explicit would have been inconvenient. The *Seiyun-kai* leaders, observing that something very closely approaching identity existed between their own resolutions and those of the *Sanshi* Club, made overtures to the latter with a view to united action. The Club received these overtures in a friendly spirit and held a meeting to consider whether they could not modify their programme so as to bring it into entire accord with that of the *Seiyun-kai*. They decided in the negative, however, but at the same time intimated to the *Seiyun-kai* that when the question comes before the House there will be an opportunity to arrange for concerted action.

The *Sanshi* Club command about 30 votes in the Lower House. Their accession to the ranks of the *Seiyun-kai* in the event of a division would therefore produce a phalanx of 190 members. The Cabinet can not make head against opponents so numerous, and it will now have to be considered whether the Budget ought to be wrecked on a rock of mere accounts. If the representatives insist on ear-marking the Chinese Indemnity, and putting it into a special purse, they must be permitted to have their way. The ultimate result of opposing them means that their programme would be carried out by their own hands,

and thus the present Cabinet has only to consider whether the rescue of the Budget from overthrow is equivalent to the loss of prestige involved in adopting the view of the majority in the Lower House.

The House of Peers, however, is with the Cabinet. Its various sections may be said to have come into line for the defence of a programme which differs from that of the Government solely in the addition of one word. The Government proposes that the surplus of general revenue shall be used for defraying the cost of State enterprises. The House of Peers proposes that the surplus shall be "temporarily" employed in that way. With regard to the Steel Factory at Kure, the House of Peers is said to be now favourable, whereas last session it was hostile. The Houses have performed a complete *volte-face* in this matter. Last session the Representatives passed the measure and the Peers rejected it. This session, the Representatives are for rejecting it and the Peers for passing it. A Japanese Cabinet must be perplexed for data to form an intelligent forecast in any contingency.

It is possible, and even probable, that under these circumstances the Cabinet will allow the Lower House to deal with the Budget as the majority think fit. Then, when the document goes to the Peers, the Cabinet's original bases will be restored, and a conference of the Houses will necessarily follow. Thereafter, should the Representatives remain obdurate, sentence of dissolution will be pronounced. That appears to be the *denouement* anticipated by many politicians at present, but considering the inconvenience that Marquis Ito experienced last session owing to the opposition of the Upper House, the *Seiyun-kai* will probably be disposed to reflect before precipitating another and more significant combat with the Peers. It becomes necessary for the *Seiyun-kai* leaders to remember that the final issue of opposing the Cabinet and wrecking the Budget is their own assumption of office, in which event they would be seriously embarrassed did they find an Upper House pledged to the financial policy which they themselves were sworn to reject. Thus the Cabinet's armoury is by no means weaponless.

Friday, Dec. 20.

There are indications, according to the leading Tokyo journals, that the Cabinet does not regard the points of difference between itself and the *Seiyun-kai* as essential, and that it will make another effort not only to convey a clearer conception of its views to its opponents, but also to discover some *via media*. There is also a very circumstantial rumour that in reply to information telegraphically conveyed to Marquis Ito by Mr. Matsuda Masahisa, Chairman of the General Committee of the *Seiyun-kai*, the Marquis has sent a message which materially affects the attitude of the Party and is likely to break down their implacable mood. Marquis Ito emphatically disapproves of political agitation tending to produce frequent changes of ministry, especially when such changes are calculated to convey to the public a false impression as to Japan's financial condition. On the other hand, the *Seiyun-kai* certainly includes elements which, while not prepared to rebel against Marquis Ito's authority, would be secretly pleased to contrive the downfall of the Cabinet. At this moment of writing, however, the indications are that some kind of compromise will be effected. Both sides must be quite conscious that whichever carries its point, not one *sen* will be added to or subtracted from the Treasury's resources. They are, in fact, disputing about

a mere question of form, and that a ministerial crisis or a parliamentary dissolution should be precipitated for such a reason would be frivolous.

The Progressists have ranged themselves definitely on the side of the Cabinet. At a meeting of the leaders held on the 18th instant, it was decided that the Party should be asked to sanction the sale of the Indemnity bonds to the Deposit Bureau and the transfer of the proceeds to general revenue; the establishment of steel works at Kure; the building of barracks in Formosa, and the augmentation of salaries for junior officials. In short, from point to point they support the Cabinet.

The Special Committee entrusted with the duty of examining the Government Bill for defraying out of general revenue the cost of railway construction, met on the 18th instant, and devoted the whole forenoon to cross-questioning Mr. Sakatani, Vice-Minister of Finance. The result was that the Committee broke up at noon without having come to any decision. These meetings for cross-examination are becoming quite ridiculous. It is the obvious purpose of some of the questioners merely to embarrass the Government delegates, not to obtain information.

CHINESE NEWS.

Saturday, Dec. 14.

The *Fiji Shimpo* has a telegram from Peking saying that while England is radically opposed to any agreement conferring exclusive rights on Russia in Manchuria, she would not raise any serious objection to an arrangement definitely fixing the time for the evacuation of the territory, provided that it was to be ultimately restored to its previous condition. On that basis, which is in strict accord with the declarations frequently made by the Russian Government, it ought not to be difficult to effect an arrangement.

Viceroy Yuan's attempts to have the civil administration of Tientsin restored to the Chinese Authorities are said to be strenuously opposed by the German and British Representatives.

Monday, Dec. 16.

The Imperial Court left Kaifong on the 14th instant. Telegrams in that sense have reached the *Tokyo Asahi* and the *Fiji Shimpo*. Up to the last moment there were rumours that the journey would be deferred, and now the belief in certain circles of Peking politicians is said to be that the Emperor himself will not return, but that a dummy will be sent in his place. This reminds us of an incident connected with the first audience given by the Emperor of Japan to Foreign Representatives after his transfer of the capital to Tokyo. When the British Minister, Sir Harry Parkes, attended by some officers from the camp in Yokohama and other officials, were conducted to the audience chamber, they made their obeisances in the usual manner, and the Minister delivered a short address which was translated subsequently into Japanese. Thereafter the Sovereign's reply was read by a Chamberlain and the visitors bowed themselves out. Throughout the whole ceremony it was observed by several of the Englishmen that the figure seated on the Throne never gave a sign of life, and that not even a fold of its voluminous garments could be seen to move. The conclusion they were disposed

to form was that they had seen a puppet, not the real Emperor of Japan—a ridiculous conclusion, we need scarcely say, and doubtless the adjective may be justly applied to the theory now entertained by certain persons in Peking.

Telegrams to the *Asahi Shimbun* say that Viceroy Yuan has announced his intention of not proceeding to Tientsin until the civil administration is given up by foreigners, and that the Manchurian question is still in abeyance.

Tuesday, Dec. 17.

The Imperial Court is expected to reach Peking on the 7th of January. Thus the journey is to occupy 25 days. That is just the time upon which we calculated originally, but we were not prepared to find the Court make such a journey in the very depth of winter.

A telegram to the *Jiji* says that Wang Wenshao was to pay consultative visits to all the Foreign Representatives on the 16th inst. and that he will subsequently open the Manchurian negotiations.

Viceroy Chang Chih-tung is said to have memorialized the Throne in the sense that an extension of the postal system is most essential.

An Imperial Decree issued in Kai-fong on the 8th of December confers special rewards on high officials. Yung Lu is among the number thus distinguished. He is granted the decoration of the two-eyed peacock's feather, with the brevet title of Senior Guardian of the Heir Apparent, and the services for which he is thus distinguished are that he gave protection to the Foreign Legations, strongly urged the necessity of exterminating the Boxers and otherwise did his best to preserve the *status quo ante bellum*, in all which Wang Wen-shao did his best in helping Yung Lu's endeavours "regardless of the difficulties and perils attending such line of action." Does Yung Lu rest under an unjust imputation in the eyes of foreigners? We have always maintained that such a thing was very possible. It never seemed to us that the evidence against him warranted the sweeping charges laid at his door. By foreigners he is regarded as one of the chief supporters of the Boxer movement and as the arch enemy of the Legations. The Throne now publicly proclaims that he protected the Legations and strongly urged the necessity of exterminating the Boxers. Where is the truth to be found?

Berlin telegrams state that the Italians are about to establish a bank in Shanghai, and further that having obtained State assistance to the extent of two million lira, they are going to open a line of steamers to China and Australia.

Thursday, Dec. 18.

It continues to be insisted that Russia is pressing China for a settlement of the Manchurian question, and that M. Lessar is leaving no stone unturned in Peking to bring about that end. The newsmongers refuse to take the view that it is China who wants a settlement, and that it was from her side that the last proposals came. Why should Russia be in a hurry? The one inconvenience of the present situation to her is its costliness, and since, under no circumstances could she leave Manchuria at once, she has probably reconciled herself to the thought that whatever interval elapses before a settlement is reached, such interval can be deducted from the period of her subsequent

occupation. It is our belief that she is quietly "sitting tight," and that she will be found ready to entertain reasonable terms whenever China is prepared to offer them. China herself is the source of danger. In her perturbation she may be disposed to purchase the restoration of Manchuria at a price which the other Treaty Powers could not permit.

The *Nichi Nichi Shimbun* takes the trouble to combat once more the rumour that Japan contemplates an alliance with Russia, or that Marquis Ito's visit to St. Petersburg had any such purpose. Our contemporary's view is that Japan can not, without sacrificing her own interests, enter into a complete alliance with any Power, and that she maintains towards all alike an equally unprejudiced attitude, being prepared to cooperate with any one of them for mutually beneficial and honourable purposes.

THE HOUSE TAX.

Saturday, Dec. 14.

It is observable that "Centaur's" arguments have completely "panned out." One of his most prominent points was that the land in the Settlements had been sold by the Japanese Government to foreigners at prices representing "the estimated value of the land at the time," from which, presumably, he desired to draw the inference that no payment of rent was subsequently necessary. On being reminded that the greater part of the land was not sold at all, but was given without charge to foreigners, his answer is:—"The least said on this subject perhaps the better. It is fair to assume that when these gifts (the italics are not ours) were made the generous donors had a fair *quid pro quo* and knew what they were about, so that this plea can not enter into the matter." It is fair to ask, then, why did "Centaur" raise the question. The point was his own. He now finds it to be a radically unsound point, which, of course, is discouraging for him, but certainly he does not improve his position by alleging at this eleventh hour that the point had better be left out of consideration.

As to the *quid pro quo* that he speaks of, with an accompanying sneer at the generosity of the official owners, the facts are well known. Originally the Foreign Representatives desired to have the settlement at Kanagawa. But the Japanese Government not only had made preparations at Kanagawa, but also knew well that it would be impossible to afford effectual protection to the persons of foreigners residing at Kanagawa on the high road to the capital. At the same time, the foreign merchants themselves saw that Kanagawa was not a suitable place from a business point of view. They were anxious, therefore, to move to Yokohama. But their diplomatic authorities restrained them, and under the circumstances the Japanese Government thought it advisable to offer some of the Yokohama lots free of upset price, a course which was subsequently extended. No one pretends to think—certainly we had no intention of suggesting—that this step was dictated by motives of generosity. It was purely political. But when "Centaur" advanced the argument that the land had been sold to foreigners at its estimated value, it was necessary to correct his facts. We are speaking now of Yokohama Settlement. The lands given free of charge elsewhere were not governed by any considerations of political expediency.

"Centaur" makes another assertion which must be traversed. He says:—"The editor of the *Mail* would appear to be ignorant

of the fact that Yokohama, Nagasaki and Kobe were all under foreign municipal management at one time, the last named until the new treaties came into operation." Now the question here at issue had been carefully limited by us to Yokohama. "Centaur's" original argument was that the superior state of affairs existing in the foreign settlements was "the result of the good management of former municipal councils." We replied, "To what foreign municipal council are we to attribute the credit of the present state of Yokohama Settlement?" "Centaur" answers by citing Kobe's case in particular and by a general allusion to the fact that Yokohama was under foreign municipal management *at one time*. It certainly was, and the editor of the *Japan Mail* happened to be a resident of Yokohama at that time, now 33 years ago. If "Centaur" intends to allege that the present state of Yokohama is in any degree due to the acts of a municipal council which administered the Settlement's affairs for a very brief interval and with conspicuous ill-success thirty-three years ago, he must not expect to be taken seriously. Neither do we think that many of the residents will support him in graciously ignoring all that the Japanese authorities have done at heavy expense during those thirty-three years, and in attributing the results of their labours to an abortive foreign municipal council which held office for a short time and made a distinct failure of it thirty-three years ago.

Frankly speaking, we regret that "Centaur" can not make a better case, for we should welcome any argument calculated to influence the Japanese Government in the direction of the only solution likely, in our opinion, to prove satisfactory, namely, arbitration.

Wednesday, Dec. 18.

A Nagasaki correspondent writes on this subject. He takes exception to our statement that the house tax is absolutely independent of the land, and in support of his objection he instances the practice in Nagasaki where the basis of assessment is partly the area occupied by the house and partly the value of the land so covered, so that, in his opinion, the house tax is an additional impost on the land on account of the use to which it is put. That statement appears to us very questionable. The bases of assessment for purposes of house tax are the area of the building and its quality, in the latter being included everything relating to the nature of the building, such as the materials with which it is constructed, the fashion of its construction and so forth. Sometimes, however, the income of the occupant is considered, that being thought a fair method of estimating the quality of his residence, and sometimes locality is taken into account, it being deemed just that a house in a thriving and populous situation should pay more per square *tsubo* of building than a house in a secluded and thinly peopled quarter. An easy method of determining the nature of the locality is to consider the market value of the land, for that generally furnishes a clear indication of the eligibility of the district for business or residential purposes. But it does not follow that there is any connexion between the land tax and the house tax. The two things are quite distinct. It is true that building land is more highly taxed than agricultural land, but the tax remains the same whether buildings are erected or are not erected, just as it undergoes no variation whether the farmer chooses to till his land or to let it lie fallow. We can not for a moment agree

with our correspondent that an additional tax is imposed on the land on account of the use to which it is put. There is no additional tax on the land. The tax is on the house and the house only. The land is taken into account merely for purposes of reference; merely to help in determining the quality of the house.

With regard to the next point made by our correspondent, namely, that we appear to ignore the decision of the "best legal authorities at home," we reply that we do by no means ignore it. But neither do we ignore the fact that it was founded on a purely *ex-parte* statement of the case. The law officers to whom the British Government referred the question did not sit as judges, fortified with all the arguments on either side and with a full account of the history of the problem. They had before them a brief prepared by counsel for one side only, and upon that they based their verdict. It is impossible to accept as conclusive the dictum that the "property" referred to in the 18th Article of the Treaty includes houses, when the terms of the article itself furnish a definition which excludes houses. The article says:—"When such incorporation takes place, existing leases in perpetuity under which property is now held in the said settlements, shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property." The English language is not capable of greater explicitness. This Article lays down with the utmost precision that the property in question is the property held under the leases. We have only to go to the leases, then, to find out what property is designated, and when we do go to them we find that land alone is concerned. They are land leases, pure and simple. They were drawn up before a solitary building stood upon the property covered by them, and the rent-charge imposed by them had no reference whatever to any structures that might subsequently be placed on the land. The people of Tokyo might with equal justice claim exemption from house-tax because the landed property they hold already bears, as urban land, a heavier tax than that levied upon rural land. Whatever decision the British law-officers may have formed on the strength of *ex-parte* evidence, thinking persons can not possibly admit that "property" defined by a document includes something to which the document makes no sort of reference.

But we do not, as Mr. Jones appears to think, deny for a moment that the British residents, or the residents of other nationalities, are justified in objecting to the tax. They are most amply justified. Their own officials have told them so, and they may well be excused if they accept and abide by a dictum so welcome. Our arguments are not intended to reflect in any way upon the attitude of either side. We merely write what we think. After all, the question reduces itself in the end to the intention of the parties who signed the treaty. It would have been a great boon had the foreign signatories invited the Japanese to furnish an explicit statement of all the taxes to which foreigners would be liable under the new system. Unhappily they failed to take that precaution—though we shall scarcely be speaking unfairly if we call it a natural precaution—and the result is that the question now turns upon intentions. We know it to be a fact that the Japanese negotiators had the house tax in view, and that they regarded it as an unques-

tionably accruing asset which would go to reduce the heavy outlays of the Treasury on account of the municipal affairs of the settlements. But we know nothing as to the intention of the foreign negotiators. We can not tell even whether the house tax ever occurred to them. Arbitration might throw light upon that point and we regard arbitration as the only satisfactory exit. Meanwhile we again repeat that the arguments of the opposition still await an exponent.

Indirectly connected with our correspondent's letter, there is a point which deserves notice. Some very strong journalistic comments have been published, condemning the Japanese authorities for proceeding to collect the house tax while the question of its propriety is still pending. These critics appear to think that such a step is in the last degree unjustifiable and imprudent. Have they reflected, we wonder, on the full import of the proposition they lay down. The doctrine to which they commit themselves is nothing more or less than that the Government of a country should suspend the operation of its system of taxation in deference to any doubts expressed by a foreign Power. That is an intolerable notion. The law of the land must take its course. Were full effect given to the doctrine under-lying these criticisms, it would follow that a so-called "Sovereign State" must await the sanction of foreign Governments before enforcing its own laws. The plain course is for the foreign residents to pay under protest, and to preserve the receipts for the monies so paid. If the matter be ultimately decided in their favour, it will be easy to obtain restitution.

We venture once more to urge the advisability of arbitration. Whichever side wins, the other does not lose face. Each has stood up for what it frankly believes to be its rights, but unfortunately an agreement does not appear to be in sight, and for the sake of this comparatively trivial matter the smooth operation of the treaties is imperilled.

DR. BAEZ'S JUBILEE.

On the 14th instant His Excellency Count Arco-Valley gave a brilliant entertainment at the German Legation to commemorate the jubilee of Dr. Baelz's twenty-fifth year of service in Japan. Count Arco-Valley could not have done anything better calculated to win the hearty applause of all nationals in this empire, for while the German community may justly be proud of possessing such a compatriot as Dr. Baelz, the subjects and citizens of every other country represented among the foreign residents are unanimous in their appreciation of his high abilities and in their esteem for the noble qualities of his character. We may add, too, an expression of the satisfaction this new departure inspires from another point of view, namely, that the duty of doing honour to Japan's foreign employés is no longer left entirely to the Japanese. There is certainly only one Dr. Baelz, and we frankly admit that an exception made in his favour can scarcely constitute a precedent for guidance in other cases. But there have been not a few distinguished men in this country who, after serving Japan in a manner substantially recognised on their return home, were allowed to take their departure from among us without any mark of official appreciation except such as the Japanese gave them in the usual routine of approval. We have often thought that had they received more honour from their own nationals, their value

would have been more justly estimated by the Japanese also. The entertainment on the 14th took the form first of a luncheon, and subsequently of a garden party. About forty persons sat down to luncheon, among them being the Minister of State for Education, the British Minister and the President of the Imperial University. Count Arco-Valley, in proposing the first toast, said:—

EXCELLENCIES AND GENTLEMEN:—Some weeks ago the friends of Dr. Baelz and the scientists who hold the same scholastic rank as himself, organized in the Koishikawa Park a celebration in never-to-be-forgotten commemoration of his having completed twenty-five years' service in the Imperial University of Tokyo. Dr. Baelz's fellow-countrymen have already testified their high appreciation of his contributions to the progress of medical science, and we desire now to give expression to our sincere admiration for his achievements. Dr. Riess, who has served with Dr. Baelz in the Imperial University for fifteen years, will presently give you an account of Dr. Baelz's career. I have to assure you, gentlemen, in my own name and in that of Dr. Baelz, that we profoundly appreciate your kindness in attending here to-day. Dr. Baelz, during the twenty-five years of his residence in Japan, has carried on the work of a teacher, of a scholar and of a physician, and has long served the British Legation in the capacity of medical adviser. Dr. Baelz is our fellow-countryman and a distinguished German scholar. It gives us the utmost satisfaction to reflect that his investigations and his writings all belong to the domain of German science. He has been closely connected with three countries, Japan, England and Germany, and I therefore ask you to raise your glasses to the healths of their Majesties the Sovereigns of those countries.

Dr. Riess then spoke as follows:—

YOUR EXCELLENCIES AND GENTLEMEN:—Our most obliging host Count Arco-Valley has honoured me, as he told you just now, with an invitation to say a few words on this occasion of the celebration of the 25th anniversary of Dr. Baelz's coming to Japan.

Now, as our Minister has told us, the many-sided activity of the Professor in his capacity as a teacher of medicine and a doctor has already been dwelt upon three weeks ago at a grand and splendid celebration. How well our friend succeeded in clearly expounding theoretical knowledge and cleverly organizing and improving the institutions of practical surgery, was explained to us then present by his colleagues and former pupils who were of course most competent to proclaim them. Japan owes a debt of gratitude to Dr. Baelz for what has been taught by him. How could I dare to go through all those branches of medical science in which our friend, as we then heard with admiration, has shown himself a most successful teacher and promoter: from physics to *matéria medica*, from bacteriology to midwifery, even from psychology to hygiene, but more especially clinical medicine. We were very fortunate in being told of these things by renowned experts, by physicians, and thus we realised in every sense Homer's saying: *ιατρὸς γὰρ ἀνὴρ πολλὸν ἀξιώτερος ἀλλῶν* = a medical man is of greater value than many others combined.

Moreover, the German Asiatic Society has not failed to recognize his merits in making the Japanese nation better known and understood among the great community into which it was received, by presenting him with an honorary Membership, and as he himself refused to admit the importance of his services, by inflicting on him the enumeration of his virtues and high qualities engrossed in lapidary style upon an artistic Diploma, which has been handed over to him. To-day it is therefore for the third time that our friend receives our felicitations as the centre of a celebration given in his honour.

My object on this occasion can only be to speak in my capacity as the oldest German colleague present at our jubilee, to speak as a man and a friend of his; to remind you how he has stood before us as a man and a friend and, accord-

ing to the deep German meaning of those two grand words, as a "Menschenfreund."

I shall never forget my first impression when, about fifteen years ago, I made the acquaintance of Herr Baelz. He stood before me firmly and straightly with erect head, the shoulders widely thrown back, with his quick eye observing the world before him with lively attention. One perceived immediately that he was a genius taking a wide range of interest, a man of many-sided knowledge and of broad views—our learned Dr. Baelz. With rare presence of mind, and quick command of his knowledge he devotes, like Virchow, all his capacities at once to the subject that is brought to his notice; he always surprises and impresses us by the drastic clearness of his words, the persuasive tone of his voice, the concentration of the rich store of his experience. His capability of observing with a widely opened eye, searching far and near, and his corresponding power of imagination that enables him quickly to combine the slightest and most distant indications, has of course been of great service to him as a diagnostic and medical artist; but at the same time it has served him equally well in all departments of his vast field of observation. The motto of the possessor of the most solid zeal for culture. "*Nihil humanum a me alienum puto*," i.e., "there is no human activity outside the range of my interests," may with perfect right be used by our friend on the shield of honour of his intellectual armour.

And while in his always interesting conversation he boldly tries to climb to a height from which he may conveniently look far and near, he pleases us still more by his warm sympathy for great and small, by his humane participation in all affairs of life. He has praises for the coolie dragging heavy loads with a sing-song, entertains children and receives orphans into his house, had encouraging words for the Japanese fencers at a time when they were greatly neglected, and takes the most hearty delight in the popular humour so widely prevalent in Japan. For everybody he readily gives, sometimes even without being asked, the best advice, the most unreserved suggestion at his disposal. His optimistic Idealism makes him always inclined to appreciate any good qualities he discovers in others, while he himself confesses most sincerely, "Despite all my efforts I shall never be able to reach such a degree of perfection;" "we cannot achieve that." I am afraid, Gentlemen, of a very widely-spread human quality, viz. laziness, our friend has no proper conception. As he himself always tries his best to still improve his good points, to bring everything nearer the Ideal, he kind-heartedly supposes the same in others.

A nature so gifted with alacrity, so much inclined to sympathetic feeling, carries the reward in his social merits and his good intentions in himself; the kindhearted pleasantness which emanates from him is in every surrounding reflected back upon him. The words "Doctor Baelz" have, as hardly any other two words, through the whole width and breadth of Japan a ring in which the memory of joyful impressions may easily be recognized.

But for so much appreciation our friend must also pay his price. There is hardly anybody in Japan whose time and strength are so often claimed by others as are his. It cannot be otherwise, and I myself have occasionally observed it: even so robust a nature must often feel exhausted and overstrained; but when in a moment of greatest fatigue anybody wishes to see him or a patient asks for his help, he cannot refuse to give his services immediately; and in a few minutes new strength seems to arise from the inexhaustible resources of his active soul; very soon he appears as fresh as though he had just risen to the first work of the day. I should like to see anyone to whom Dr. Baelz, for the sake of his own convenience or for the purpose of showing his modesty, or for any other reason, has ever said *Ne* when his assistance was requested.

And now we wish for him and us that he may still for a long time remain as he is: honest and true, of always equal liveliness of soul and elasticity of body, public-spirited and kind. In this wish, Gentlemen, I hope you will with full

hearts and with full glasses join me. Long live Dr. Baelz!

His Excellency Sir Claude MacDonald subsequently said:—

YOUR EXCELLENCIES AND GENTLEMEN,—Count Arco and Professor Riess have spoken so fully and in such eloquent and feeling terms that there is little for me to add. I will only therefore say that for my part I entirely endorse all that they have said respecting Dr. Baelz.

I should like to add on behalf of the British Legation that we deem it an honour to be associated with so clever and distinguished a member of the medical profession, and with so upright, warm-hearted, and courteous a gentleman.

The toast of Dr. Baelz's health having been drunk with the greatest enthusiasm, the learned physician spoke as follows:—

YOUR EXCELLENCIES AND GENTLEMEN,—It is difficult for me to express in adequate terms my gratitude towards H.E. Count Arco for arranging in my honour this splendid fête, and for the kind words he has spoken. In fact, I find he honours me too much, and the same I must say of my friend, Dr. Riess, who gave too glowing an account of my work. In accordance with the saying of the old philosopher: *gnothi seauton* (try to know thyself), I have often tried to see my inner ego as in a mirror, but the image I saw there was of a far less flattering character.

What I have done, is this. I have stood at my post—a pioneer post of science—for fully 25 years. In Europe that is quite a common thing, but it is true, out here in Japan, where the foreign element, diplomats, consuls, professors, merchants and others change quickly as in a kaleidoscope, a man who occupies the same position for a quarter of a century, is a rare phenomenon.

Our friends at home often say that they cannot understand how one may stay away from Europe so long without being obliged to do so; they all feel with Tennyson:—"Better fifty years of Europe than a cycle of Cathay."

But I make bold to say that the last twenty-five years have been as interesting in Japan as anywhere in the world to the observer who came here with open eyes and with interest for the country and its people, and who told himself that he had not only to teach, but also to learn. To him there lay open a most attractive field. He was witness of a phenomenon unique in the history of nations, of the almost abrupt transition from one kind of civilization to another, from strict isolation right into competition with the nations of the west, plowing all the oceans with the keels of their ships.

He was witness to a revolution, political, social, economical, and even moral, so sudden, so thorough, so radical as no other nation has gone through in such a short time. What a field for the study of racial and ethnological psychology, of which I confess myself an ardent student!

And the mere fact that Japan has emerged from these political and social earthquakes as we see her to-day, proves what a healthy foundation there must be in a nation, which through two hundred and fifty years if internal peace and external isolation has not become effeminate and degenerate like the Koreans, but which has kept its energy and activity so fresh and fiery, that now, after only thirty years, it has to speak a weighty word on water and on land when it comes to decide the fate of this part of the world.

When I arrived here, Japan was, so to speak, in the schoolboy age of the western civilisation. In the Army, in the Navy, there were foreign instructors. On the only railway, between Tokyo and Yokohama, the engine-drivers were foreigners. The Mercantile Marine was represented by the still small fleet of the Mitsu Bishi Company under the directorship of foreigners. The schools for Law, Medicine, Engineering had only been opened.

Now, the Japanese Army and Navy, directed by Japanese, are equal to those of the most advanced Western countries. An extended system of railways covers not only old Japan, but has reached Yezo, and Formosa. The Mercantile Marine has her own steamer lines to Europe, America, Australia. The University and other

scientific schools have educated and turned out quite a number of well trained specialists, and they are now under Japanese control—a result of which Japan may be justly proud. Two circumstances have made my sojourn here particularly interesting: first, that I have known almost all the leading men personally, and second, that my professional work gave me a chance of a deeper insight into the inner life of the gifted people, than it is usually the share of foreigners to obtain.

And I may say, too, that this my professional experience has shown me that there are now in Japan a number of good native physicians and surgeons, the elite of whom I have the honour to see here to-day.

I have always considered myself fortunate in that my work here was by its nature neutral and international; and indeed, in these days of national rivalry and quarrelling, science only knows of no prejudice against race, nation, or individuals. In science only Goethe's words have been fulfilled:—Orient and Occident sind dich mehr zu trennen.

It is my fervent wish that this tie of science uniting Japan with the Western world may become still tighter, and that it may be strengthened in the future by other ties of a similarly friendly kind.

In the afternoon a large party, chiefly Germans and Japanese, assembled in the spacious grounds of the Legation where refreshments were served and a band played, while within the building an admirable performance of music was given. A specially attractive feature was the singing of Miss Kayser, whose beautiful and highly trained voice delighted her hearers. The party, having joined in toasting Dr. Baelz, broke up at sunset after a most enjoyable afternoon. The following is the programme of music:—

- 1.—Romanze fuer Violine aus "Jocelyn" G. Godard.
Fraulein Mayeda.
- 2.—Arie der Elsa aus "Lohengrin".....R. Wagner.
Fraulein Kayser.
- 3.—Sonate F-dur fuer Violine und Klavier.
Satz 2 und 3A. Dvorak.
Herr Junker und Dr. Crusen.
- 4.—Arie der Leonore aus "Alessandro Stradella"
F. von Flotow.
Fraulein Kayser.
- 5.—a. Chanson tristeP. Tschaikowsky.
b. GavotteK. Bohm.
Herr Junker.

COMPETITION WITH BRITISH TRADE.

We recently reproduced a letter addressed to *The Times* by an Australian, indicating that in several staples of trade Great Britain was suffering heavily from American competition in Australia, and suggesting that she was not unlikely to be driven out of that important market altogether. Such information, supplementing previous assertions, often repeated, as to deep inroads made by German competition into British trade, was well calculated to inspire alarm. It seems to have induced statisticians to look into the matter, and the result of their researches is very far from bearing out these pessimistic conclusions. In fact, the long and short of the matter would seem to be that the appearance of competitors in fields hitherto monopolized wholly by Englishmen has created alarm quite incommensurate with the facts of the case. Thus, with regard to New South Wales, it is found that whereas imports from Great Britain increased from £8,211,351 in 1899 to £9,923,117 in 1900, a difference of £1,711,166, imports from Germany stood at £856,032 in 1899, and at £1,105,664 in 1900, an increase of only £249,632. If the question of New South Wales' trade with all over-sea countries be considered, it appears that whereas the value of imports from Great Britain

was £7,190,115 in 1896, it grew to £9,923,117 in 1900, an increase of nearly 234 millions in five years, while the increase of imports from France, Germany, America and other countries not under the British flag during the same period was less than 2 millions, and the total value of such imports in 1900 was only £5,120,115, or little more than one-half of the value of British imports.

Even more interesting is the question of American competition in iron and steel. An idea has been suggested that Great Britain is suffering severely in this competition, and many people even go so far as to say that she can not possibly hold her own. But statistics show that during the first eight months of the present year British exports of iron and steel, hardware, cutlery and machinery of all kinds aggregated £35,865,574 in value, whereas American exports of the same articles for the same period totalled only £13,869,299. The United States has therefore a long way to travel before she is on a level with Great Britain in the very line where she was supposed to have attained most striking results. Even in sewing machines, which have been so often referred to, the returns show that Great Britain exported £1,052,271 worth to foreign countries while America sent abroad £505,624 worth. All this is very reassuring.

REDEMPTION OF LOAN BONDS.

The Minister of State for Finance, at the close of his speech in the House of Representatives on the 12th instant, made an important statement which deserves special notice. He said that the Government hoped to redeem the fixed portion of the public loan next year by the method of lots. At present the plan pursued is to buy bonds in the market whenever they can be obtained cheap, the result being that the Treasury's operations do not tend in any way to enhance the value of its own securities. Now it happens that when the loans for the war of 1894-5 were floated, many bankers and private individuals subscribed for the bonds at par, trusting confidently that even if the Government did not take immediate steps to repay the money, it would at any rate adhere to the then legally determined method of redemption by lot at par. But the Government subsequently obtained permission from the Diet to substitute for the lot system purchases in the open market at the cheapest ruling rates, and the original subscribers to the loan now find that securities for which they paid 100 yen in good faith, do not command more than 86 or 87 yen. They consider that they have been very harshly treated, and that the Government is not acting properly when it takes advantage of the depreciation of its securities at holders' expense. Apparently the Government has been induced to take the same view.

BRITISH LOCOMOTIVES.

Lord George Hamilton's open letter to Mr. Baird has elicited from representatives of British locomotive builders a letter which is worth perusal by any one interested in the question of locomotive rivalry:—

TO THE EDITOR OF "THE TIMES."

Sir,—We have read with interest your article dealing with Lord George Hamilton's letter to Mr. Baird on the subject of competition of American and German locomotive builders for locomotive engines for India, and we—the locomotive builders in

Glasgow—wish to submit jointly the following considerations.

First, as to American competition.

The American engine is designed with the view of reducing as much as possible the amount of hand labour in the course of its construction, and substituting machine work instead, and it is, therefore, a cheaper engine to build in works which are equipped for its construction than the British engine is in works equipped for the construction of the British engine.

Until the commencement of the American competition for Indian locomotives some three or four years ago all engines ordered for India were of the British type, modified, of course, to suit local and climatic conditions, and British builders were asked to build these types only. When the American builders began to compete they were allowed to offer their own type of engine, except in the case of some details which did not affect the general construction of the engine. In the case of the broad-gauge engines, for instance, all have been supplied with outside cylinders, and without crank axles, whereas, with very few exceptions, the Indian engines made in this country have inside cylinders and crank axles, the latter being the most expensive part of the engine per ton.

It follows, therefore, that, as far as design is concerned, the Americans were allowed to supply a cheaper engine than British builders.

As to materials employed in the construction, the British builders are compelled to obtain certain materials from two or three makers, whose productions have been found to give the most satisfactory results in working, but which are, not unnaturally, costly. Were the American builders in all cases restricted to the same makers?

As to workmanship, we have reason to believe that the American engines supplied to this country were very far below the standard of workmanship obtaining in the best locomotive works in Britain, and we have had before us unofficial information from India which goes far to show that the same was the case in the Indian engines.

You, Sir, treat the matter, rightly, we believe, as one of national importance, and we suggest that Lord George Hamilton should send a small commission to India to inquire into the results obtained with the American engines there, and also that the English railway companies who have American engines working on their systems—viz., the Midland, the Great Northern, and the Great Central Railways—should be asked to allow the same commission to inquire as to the results obtained on their railways.

As to German competition, as the two orders recently sent to Germany are the first that have been given for locomotives, India has yet to prove that "Germany can serve her better than England in the matter of locomotives." For ourselves we frequently get, and are at the present time getting, orders for engines for foreign countries, such as Holland, Sweden, Spain, &c., in competition with German makers, for railways whose directors have learned that what is cheapest in first cost is not always cheapest in the long run.

It would be interesting to know what makers of material are to be accepted in the case of the German engines. We can buy German tyres, axles, &c., much cheaper than we can get them in this country, but so far we have not desired, and have not been invited, to use these materials in the construction of engines for India.

It does not appear to be known that since the East Indian and Assam-Bengal Companies sent their orders to Hanover, two other Indian Railway companies have placed orders for 25 and 6 engines respectively with home manufacturers, preferring to pay a higher price and to wait longer for what they presumably believe will ultimately prove to be the cheapest source of supply.

The present difficulty has been caused by the simple fact that we are filled up with orders sent to us from all parts of the world by companies who know our work, and who, in forecasting their needs, prefer to wait for us rather than go elsewhere, while obviously they do not regard our prices as "prohibitive."

With regard to the future, if the Indian railways are prepared to accept the cheapest engine offered without regard to quality of material and workmanship, then the capacity of the existing establishments is quite ample to satisfy the demand. On the other hand, if it is proved that the British engine, though not the cheapest in first cost, is the most economical in working and maintenance, and the Indian railways are prepared to restrict themselves to British manufactures for the future, we are prepared to take such steps as may be necessary to meet any future demand.

We are, Sir, your obedient servants,

NEILSON, RED, & CO.

DUNS & CO.

SHARP, STEWARD, & CO. (limited).

J. F. Robinson, Managing Director.

Glasgow, October 24.

COMPRADORES.

Some leading merchants in Manchester who are connected with the China trade have resolved that the Chinese language shall be taught to young men destined for the Far East, the idea underlying the project being direct dealings with native merchants in the interior and independence of compradores and shroffs. Concerning this, the *North China Daily News* makes the following interesting remarks:—

The comprador is something more than an interpreter and a go-between; he is a capitalist and often finances the houses which he represents; he is a guarantor for the stability and security of the customer he introduces; and his position in China is relatively one of the highest and most coveted. He is likewise an expert in the complicated coinage system, which is a very important consideration in China. His high status can only be attained by years of practical experience and sterling honesty. He is the means of establishing mutual confidence between trading parties. He is as honest and business-like in his dealings as other business men, and his deflections from the paths of virtue are no more than those of other men. Our Manchester friends must be hypercritical indeed in their estimate of the comprador, and also guileless in their intentions, if they think he is to be substituted by a raw inexperienced youth, coming from Owen's College with a year's educational training in Chinese. An acquaintance with the Board of Trade would have shown them that British civil servants, intended for service in China, are sent out for three years' educational training on the spot, and at the end of that time their knowledge of the language is hardly much more than a mere smattering of a local dialect; the experience of missionaries is somewhat identical. In what position then will be the student from Owen's College with his year's, or three or four years' training, sent out here to negotiate for business men, say a thousand miles in the interior where a score of dialects are spoken? And yet, to open out or develop an export trade with the interior, this difficulty must of sheer necessity be first overcome. For this work the comprador is *facile princeps*. He is native-born, and understands Chinese dialects better than anyone else; and for this reason, combined with the others previously referred to, it is impossible to find a qualified substitute in the present condition of things.

DEATH OF MR. NAKAYE TOKUSUKE.

Mr. Nakaye Tokusuke died on the 13th instant. He had been promised a year and a half's life by his physicians if he adopted the utmost care, but he seems to have lasted only a year. The celebrated Buddhist priest Shaku Unsho made many attempts to obtain access to Mr. Nakaye during the final days of his illness, and was at last admitted by Mrs. Nakaye, who probably did not share her husband's agnosticism. The dying man had almost lost the power of speech or motion, but it is related that he attempted to throw his pillow at the reverend gentleman when the latter commenced a Buddhist service. He has left a will forbidding the use of any religious ritual at his burial.

DEATH OF MR. A. J. HOW.

Not in Shanghai alone but also in Yokohama and Tokyo the death of Mr. A. J. How has certainly caused profound sorrow. He belonged to the old-day class of business man, the pride of Oriental settlements, genial, loyal, open-handed and thoroughly hospitable. A long series of years passed in Shanghai did not seem to have weakened his strong constitution, and he had become so much a part and parcel of the place that the idea of bidding him a last farewell never seriously presented itself to the innumerable friends who loved the cheeriness of his daily converse and confidently hoped to enjoy it for many a year to come. May he rest in peace after the long day's work. He carries to his grave such affection as few men win outside their own family circle.

MR. E. H. HOUSE.

Mr. Edward Howard House died at his residence in Tokyo on the 18th instant at one o'clock in the afternoon. Mr. House had been an invalid for over twenty years, the whole of his body from the waist downwards being paralysed by gout, so that he could never stand erect nor move from place to place without the aid of a chair on wheels. He bore his terrible affliction with exemplary fortitude, though the burden must have been hard indeed to endure, seeing that it was imposed at the early age of forty-five. Mr. House was unquestionably the most brilliant writer ever connected with journalism in the Far East. Already before visiting Japan he had earned a high literary reputation in his own country, America, not only for his newspaper writings but also for dramatic compositions, among which may be mentioned the celebrated "Colleen Bawn," immortalized by Dion Boucicault's acting. Shortly after reaching Japan, in the early seventies, Mr. House established and edited a journal called the *Tokyo Times*, which soon attracted wide-spread attention by its sparkling and caustic style and its fearless advocacy of Japan's international cause. The public temper was different then from what it is now. Very few persons seriously entertained for one moment the idea that Japan suffered any hardship by being deprived of her tariff and judicial autonomy, and Mr. House's arguments were generally regarded as heretical and dangerous in the extreme. He took the Shimonoseki incident as a special target for attack, and incidentally the character of the late Sir Harry Parkes received at his hands such prejudiced treatment that the name of the *Tokyo Times* soon stank in the nostrils of the British residents, who knew that their intrepid and conscientious Minister did not in any sense deserve such treatment. It may indeed be said with truth that the great effect which Mr. House's brilliancy and dogged persistency would have produced in the natural order of things, was much marred by his intemperance and by a fervour of controversial zeal which betrayed him into dissipating his strength on non-essentials and substituting success in a side issue for victory in the main cause. Nevertheless the credit undoubtedly belongs to him of having been the first to make the public reflect about Japan and about her titles, nor can it be denied that America's awakening to the rights and wrongs of the Shimonoseki affair and her ultimate restoration of her part of the indemnity would certainly have been long deferred and possibly might never have taken place but for Mr. House's intellectual activity and ceaseless agitation. He bore with apparent complacency the odium and even the ostracism that his writings brought upon him in the Far East. His favourite motto was "they are slaves who would not be, in the right with two or three." Yet there is no doubt that he suffered keenly under it all, and that one of his most welcome compensations was when he found himself able to advertise that if the editor of a certain local contemporary whose son had undertaken the task of horsewhipping Mr. E. H. House, would send to a certain place at a certain hour on a certain day, he might have the fragments of the shattered cane restored to him. This love of fighting led to a strange incident, probably unknown to most of our readers. In connexion with the Japanese Authorities' inability to apply their quarantine regulations to a vessel which visited Yokohama, the *Tokyo Times* published such

vehement attacks upon the Minister of the country whose flag the vessel flew that His Excellency could barely be restrained from challenging the scurrilous editor. He ultimately contented himself with intimating that the *Tokyo Times* must not be sent to the Legation any longer. But Mr. House replied that the subscription had been paid up to a certain date, and that pending the expiration of that period the paper should go to its destination. Thenceforth a messenger was steadily employed by each side, one to deliver the paper, the other to carry it back again. These fighting instincts contrast sadly with the physical helplessness to which Mr. House was ultimately condemned for the long, weary period of twenty years. Not intellectual helplessness, however. Only a few months ago this community had an opportunity of judging how little his power of attack and defence had suffered by illness when he took the field in the correspondence columns of the *Japan Mail* for the purpose of denouncing what he rightly or wrongly regarded as musical charlatanism. He retained, indeed, the full vigour of his mind to the last. Nature was not sufficiently kind to mitigate his bodily sufferings by dulling his appreciation of the active life from which he was hopelessly excluded. He found some comfort in music, of which he had always been passionately fond, and many hours during the last two years of his time upon earth were devoted to training youths of the Imperial Band. He built a house specially for their reception, and it was probably one of his bitterest disappointments that the conservatism of the Household Department interfered with his artistic projects. The solace of religion was denied to him. He lived and died an agnostic, and one of his last injunctions was that no religious ceremony of any kind should take place at his burial, a behest which his adopted daughter, Mrs. Kuroda, intends to observe faithfully. It is inexpressibly sad to review the life of such a man and to reflect upon the great gifts sacrificed by the cruelty of fate which crippled him in mid-career. He was a sincere friend of Japan, and it probably pleased him to find that the comparative neglect shown towards him by his own countrymen and other Occidentals in the closing years of his life, was partially atoned for by the loving attention of the people for whom he had so strenuously laboured.

His Majesty the Emperor was pleased to bestow on Mr. E. H. House, shortly before his demise, the second class order of the Sacred Treasure.

It may be a congenial occupation for a journal like the *Japan Herald* to traduce the memory of a man who lies awaiting burial, and whose hand can never be raised again in his own defence. The helplessness of a victim constitutes an enticing opportunity for vilipenders of a certain type. Of such slanders no detailed notice need be taken. But when the *Japan Herald* alleges that Mr. House "induced a Japanese Minister of affluence to furnish him with means to publish a newspaper in Tokyo, the understanding being that he agreed to engage himself to write that indefatigable Minister, Sir Harry Parkes, out of the country in a couple of years,"—when the *Japan Herald* makes that statement it is guilty of deliberate falsehood. We say "deliberate" because the *Japan Herald* must be perfectly well aware that no such agreement could ever have been contemplated by a Japanese Minister. The Minister in question, one of the most distinguished men in Japan, has always been

a firm friend of England, and was on terms of special intimacy with Sir Harry Parkes. He would certainly not think it worth his while to contradict a libel appearing in such a journal as the *Japan Herald*, but we deem it necessary to notice the falsehood because of the insolent effrontery with which it is formulated. Doubtless the result will be a shower of mud poured upon our own heads, but that will not mitigate the *Japan Herald's* brutality to the dead or its unscrupulous libel on the living.

THE KYOTO HOTEL AFFAIR.

It is observable that the *Kobe Chronicle* continues to be the victim of misconceptions about the Kyoto Hotel affair. In a recent issue our contemporary makes much of the fact that the road over which the privilege of passage was disputed "is not now and never was the property of the Hideyoshi shrine," and adds that "the fact provides a curious comment, first on the attempt to extort money for granting on behalf of the Hideyoshi shrine trustees the right to use the road, and second on the defence offered on behalf of the Hokokkai that as trustees they could not grant a right for which nevertheless the sum of ten thousand yen had been asked." The road certainly is not the property of the shrine in the sense that the land over which it is constructed belongs to the Government, but it is the property of the shrine in the sense that the latter paid for its construction and also disbursed a large sum on account of the shifting of houses which interfered with the passage. There can be no question that the use of the road for the purposes of the Kyoto Hotel or for any other purpose except as an approach to the shrine of Hideyoshi, could not have been permitted without the consent of the trustees of the shrine, and under these circumstances it seems idle to draw fine distinctions between the Government's right of eminent domain and the trustees' right of actual tenure. Equally idle and most unjust is it to attempt, as our *Kobe* contemporary attempts, to create an impression that the trustees were guilty of deliberate misrepresentation with the object of extorting money. We may add as to this so-called "extortion" that, according to investigations conducted by the Finance Department, the sum of ten thousand yen was not demanded by the Secretary of the Hokokkai, but offered by the representative of the Hotel Directors, and the purpose to which the money should be applied was distinctly understood to be the keeping of the road in repair. It was at the request of the representative of the directors that the terms of the arrangement were embodied in a letter. We do not defend the action of the Secretary of the Hokokkai, for although he showed himself most sympathetic and helpful in the early stages of the affair, his ultimate course certainly can not be called tactful. But in the matter of tact or grace the main sinner is the *Kobe Chronicle*, which even now insists that the intervention of the Japanese Authorities "at the eleventh hour," was due solely to the publicity given to the affair, and implies that they were not actuated by any genuine desire to help the foreign company out of a difficulty. The publicity given to the affair had nothing whatever to do, in a direct sense, with the steps which the Finance Department took and which were the means of effecting a settlement. Indirectly that publicity certainly contributed to the result since it induced a representation to the Department, but the Department would surely not have interfered unless it

had been approached, for it is in no sense the business of officials to intervene in private transactions. When our Kobe contemporary says, "it was most unfortunate that those in authority waited until the eleventh hour, before settling a question which should never have offered any difficulty," it pronounces a most thoughtless dictum. If officialdom did not step in, that was merely because it was not asked to do so. Up to the moment when the Directors of the Hotel published their report, the negotiations had been entirely of a private character, and we affirm with absolute confidence that if, before making that report, the facts of the *impasse* had been brought to the notice of the Authorities, the misunderstanding—for it was nothing more—would have been quickly settled. Grace can not be exacted from any journalist, but the public has at least a right to expect that statements will not be made calculated to minimize the genuinely friendly character of official procedure and thus to deter repetitions of such assistance as was rendered in the present instance.

MANCHURIA.

The Peking correspondent of *The Times*, wiring from Hankau under date of November 3rd, and subsequently from Peking, said:—

In view of the many versions extant with regard to the text of the proposed Manchurian Convention, the following correct translation of the authentic text, as communicated by the Grand Council to the great Viceroy interested, is essential to a proper understanding of the latter's protests.

Article I.—Russia agrees to return Manchuria to China, the country to remain on the map of China as before the Russian occupation and to be administered by Chinese officials.

Article II.—The agreement of August 27, 1896, with the Russo-Chinese Bank is hereby declared binding for ever, and the protection of the Trans-Manchurian Railway and Russian subjects is undertaken. If no further rebellion occurs and action on the part of other Powers does not interfere, the Russian forces in Manchuria will be gradually withdrawn as follows:—Within 1901 from the four southern sections of the Mukden province as far as the Liao River, also the Shanhai-kwan-Niu-chwang Railway to be restored to China. Within 1902 the remaining forces in the Mukden province to be withdrawn. Within 1903 the possibility of withdrawing all forces in the other two provinces of Kirin and Hei-lung-kiang will be investigated.

Article III.—The military governors of the three provinces shall in concert with the Russian military authorities decide the number of Chinese troops to garrison Manchuria and the places where they are to be stationed, and China shall not reinforce them beyond such number or advance them beyond such limits. Except in land indicated as pertaining to the Trans-Manchurian Railway administration, the military governors shall use solely Chinese troops, infantry or cavalry, to serve as police, but are forbidden to use artillery.

Article IV.—The Shan-hai-kwan-Niu-chwang-Sin-min-tung Railway will be restored to its original owners; but other Powers may not send troops to protect the railway which, with all the land now occupied by it, shall be under the sole charge of Chinese troops. The repair and upkeep of the railway shall in every respect conform to the provisions of the Russo-Chinese Treaty and Railway Loan Agreement. Without the permission of Russia no prolongation of the railway or construction of new branch lines shall be permitted in the southern portion of Manchuria, nor may the Liao River bridge nor either terminus of the railway be moved. The expenses incurred by Russia in repairing the Shan-hai-kwan-Niu-chwang-Sin-min-tung Railway and the cost of maintenance must be refunded.

No mention is made in the foregoing of mines, commercial, or other exclusive privileges; therefore the provincial authorities fear that other clauses exist which the Grand Council is unwilling to disclose.

Peking, Nov. 8.

I have obtained from most trustworthy sources details regarding the recent diplomatic proceedings in connexion with the new Manchurian treaty, which show that its signature was frustrated by vigorous action on the part of Japan, and that the wrangling on the subject with M. Lessar, the Russian Minister, which ensued, was the immediate cause of Li Hung-chang's death.

The Japanese Legation a fortnight ago secured a trustworthy outline of the terms of the treaty, and thereupon demanded of the Chinese plenipotentiaries officially to lay before them the text of the instrument, basing its demand on the Japanese interests involved in any change in the *status* of affairs in Manchuria. The plenipotentiaries refused. The Japanese Government then communicated direct from Tokio with the Southern Viceroy, and induced them to use their influence with the Empress against the treaty. In the meantime, the Empress had already instructed Li Hung-chang to sign the treaty, though commanding him, if possible, to secure before doing so, the modifications mentioned in a recent despatch. Her instructions, however, contained an important proviso—namely, that Li Hung-chang should first communicate the terms of the treaty to the Ministers of the Powers, and sign it only if they did not object. Last week Li Hung-chang visited M. Lessar and explained these instructions to him. M. Lessar strongly objected to the contents of the treaty being revealed to the other Ministers, and the interview was a stormy one. Li Hung-chang went home in a violent rage and had a hemorrhage, which the doctors attributed to the effects of excitement and over-exertion on his weakened system.

While these events were taking place at Peking, the Southern Viceroy sent the Empress a strong memorial again the treaty. Upon receiving it, the Empress telegraphed to Li Hung-chang countermanding the order to sign the treaty. These instructions were only received after Li Hung-chang had become unconscious. After their arrival M. Lessar yesterday endeavoured to get Li Hung-chang's seal affixed to the treaty. Chou-fu had, however, arrived from Pao-tung-fu, taken charge of the seals as Li Hung-chang's temporary successor, and transferred them to his own official residence.

Simultaneously with its publication of the above, *The Times* published a statement from St. Petersburg that no proposals regarding the Manchurian question had been made to the Chinese Government by Russia since the month of February, and that if the question had been again raised, it was on the initiative of the Chinese themselves. That is what we believe and have frequently asserted.

FORMOSA.

The recent outbreak in southern Formosa is referred to three causes; first, the active measures taken by the authorities to search out disaffected persons, who consequently became desperate; secondly, a partial failure of the rice crop; and, thirdly, the changes made in the system of local administration; changes which were misrepresented to the people by insurgent leaders. The insurgents are in 4 or 5 parties from 50 to 500 strong each, and it has been found necessary to send troops against them. The Japanese divided into 17 companies for the purpose of pursuit, but the work seems to have been very arduous on account of the nature of the ground, nor does it appear that the troops have as yet gained any decided advantages.

KOREAN NEWS.

Monday, Dec. 16.

It has been settled that the French post offices shall take charge of mail matters between Korea and China. So we learn from a telegram to the *Asahi*.

Italy has established a Consulate in Seoul. The new Consul arrived in that city on the 14th instant.

Tuesday, Dec. 17.

A correction is now wired concerning the strange telegram received on the 15th inst. to the effect that the French post office in Seoul was to undertake the transmission of mail matter to China. The truth appears to be that all mail matter for French colonies in the East will be entrusted to the French office in Korea, and forwarded thence to a French office in China for final despatch to the various destinations. The charge per letter will be 3 *sen*.

Mr. Pok has at length left Japan. He sailed from Nagasaki on the 15th instant for Chemulpho by the *Sundai Maru*.

THE DIET.

Saturday, Dec. 14.

The speech made by the Minister President of State in the House of Representatives on the 12th instant, was couched in general terms. After noting that friendly relations exist between Japan and foreign Powers, and assuring the House that the Cabinet devotes all its energies to carrying out the essential policy of the Restoration, his Excellency made brief allusion to the North-China complication and to the constancy of Japan's endeavour to promote a settlement by cordial coöperation with the other Powers. As to finance, he frankly admitted that the attempts to obtain money abroad had been unsuccessful, and he explained that the Government had met the situation by postponing such of the State's enterprises as could be deferred without serious loss or inconvenience.

The Minister of Finance made a speech giving the salient points of the Budget. Alluding to the figures—which have already appeared in our columns—he pointed out that there is a surplus of 2½ million *yen* in the grand totals, which surplus the Government proposes to appropriate for Formosan purposes. The ordinary revenue shows an increase of 17¼ million *yen*, as compared with the current year, owing to augmentation of taxes—in accordance with the measure passed by the Diet last session—and owing to development of the Customs' revenue and the earnings of State industries. On the other hand, the extraordinary revenue shows a decrease of 16½ million *yen*, which is due to the facts that no domestic loans are to be floated; that only a small sum—7½ million *yen*—is transferred from the original Chinese Indemnity, and that the schemes of military and naval expansion have now been carried so far as not to involve continued heavy outlays. The ordinary expenditures, however, show increases of 16½ million *yen*, owing to larger appropriations for the redemption of the National Debt and to various outlays on account of education and works of communication. With reference to the new undertakings planned by the Government, the Minister spoke of them briefly, as they have already been described in our columns, but added that an experimental *sake* brewery was contemplated with a view to introducing reforms in the methods of manufacture. He further confirmed the facts with which the public is familiar, namely, that 47½ million *yen* worth of Chinese bonds are to be sold to the *Yokubu* at 80 per bond. This, added to 20 millions accruing from increased taxation, will place the Treasury in possession of 58 million *yen*, of which 2½ millions will be devoted to paying expenses in China 20½ millions will be used to restore the Naval Reserve Fund; 11½ millions will be employed for redeeming bonds, and the remaining sum will be used for carrying on State enterprises. Finally, the Government has decided to postpone public undertakings to the extent of 6 million *yen* out of the 23 million that ought to have been appropriated for that purpose according to the post-bellum programme. Hence the surplus remaining from the Chinese indemnity and from increased taxes, as noted above, will be sufficient for these works.

Thursday, Dec. 18.

HOUSE OF PEERS.

The House of Peers met at 10 a.m., and proceeded to read a Government Bill authorizing the issue of Exchequer Bills at a discount. Baron Kaneko opposed the measure as calculated to impair the country's credit, and several other members took the same view. The Bill was finally handed to a special committee, and the same procedure was adopted with regard to a Bill for extending from 7 months to 12 the period allowed for registration of foreign patents.

The House rose at 10.40 a.m.

Friday, Dec. 20.

HOUSE OF REPRESENTATIVES.

The House of Representatives met on the 19th instant at the usual hour and sat until past 5 o'clock. Sixteen private bills of no special importance were read and handed to Special Committees.

A bill was then introduced by the *Seiyu-kai*, providing for the abolition of the present system of reducing the national debt by purchasing bonds in the open market at current rates, instead of redeeming them at par by lot.

The Minister of State for Finance insisted that no necessity existed for such a bill, inasmuch as the Treasury proposed to redeem 12 million *yen* worth of bonds during next year by lot, and funds to carry the process of redemption any further would not be available.

The bill was handed to a special committee.

Two bills of similar purport were then read. One, introduced by the *Seiyu-kai*, provided that the Chinese Indemnity must be treated in a special account; the other, introduced by the *Sansei Club*, contained the same provision but added that the Indemnity must be applied to Far-Eastern purposes.

Both bills were discussed simultaneously. The Minister of State for Finance opposed them vehemently, and Mr. Ozaki Yukio, parliamentary leader of the *Seiyu-kai*, supported them. Finally they were handed to a special committee of eighteen.

THE GOTEMBA HOSPITAL.

We beg to acknowledge the receipt of the following sums for the Gotemba Leprosy Hospital:—

	Yen.
Anonymous	100
Messrs. Robison & Company	100
Rev. A. J. King	5
F. Brinkley	10
"Japan Mail"	20
Mr. J. T. Hamilton	100
W. K.	10
Mr. Sonoda Kokichi	20
Mr. T. B. Glover	10
Mr. A. J. White	5
Mr. F. Schroeder	1
Mr. H. C. Pigott	20
A. I.	5

R. N. A. V.	5
T. W. Hellyer	10
W.W.	5
Baron H. Iwasaki	50

A FOREIGN PROFESSOR.

The *Nippon* publishes an attack upon a certain foreign professor in Tokyo who is said to be behaving with such rudeness that pupils decline to attend his classes, and there is general discontent among all those connected with him. We refrain from giving names, the probability being that the story contains only a very small germ of truth.

NOTES ON CURRENT EVENTS.

There is an idea in some quarters that England is falling behind certain other nations in the furniture industry, and that Germany among others is rapidly catching her up. That is not the case, as will be seen from the following figures which show the furniture exports of the six principal countries at intervals of a decade:—

	1891.	1900.
United States	615,858	873,133
United Kingdom	591,915	636,629
Austria	418,667	624,042
France	699,024	560,004
Italy	182,480	495,315
Germany	215,000	370,000

It will be seen that France has lost her second place and fallen to the fourth on the list, and Germany, which used to be fifth, has become sixth. The most remarkable progress has been made by Italy, which exported in 1900 £495,315 worth of furniture against £182,480 ten years previously.

Viscount de Bondy has just returned from a short sojourn in Peking, whither he proceeded last month for the purpose, it is stated, of discussing some important official questions with the French Minister in China. It appears that the Viscount will not immediately repair to his new post in Indo-China. He has resumed his duties of First Secretary at the French Legation in Tokyo, and will probably remain there for some time, having received telegraphic orders from the Minister of Foreign Affairs in Paris to hold his post in the Japanese capital pending further instructions.

The Public Procurator has returned Mr. Tanaka Shozo's petition, and has warned him that if he desires to present petitions to the Throne in future, he must follow the prescribed procedure. No further steps will be taken against Mr. Tanaka. That result will doubtless be found very satisfactory by the public, but in our opinion the privilege of pardoning Mr. Tanaka should have been reserved for the Emperor himself.

With reference to the Oriental Hotel Company's hotel project in Kyoto, the *Kobe Herald* understands that the difficulty has been overcome at last and the Company are now at liberty to use the disputed road if they should determine to go on with the enterprise, upon the simple condition that they pay a share of the up-keep and for any damage that may be caused through the passage of heavy carts, etc.

We read in Japanese journals that Captain Baehme (apparently) arrived at Ujina on the 12th instant, in the *D'Entrecasteaux*, conveying a hundred decorations granted by the French Government to officers of the Fifth Division which served in the Chili campaign.

On the evening of the 14th instant a large number of the members of the Tokyo Club, Japanese and foreign, gave a farewell banquet to Mr. A. R. Pattison. The health of Mr. Pattison was drunk with great enthusiasm, and amid fervent wishes that duty or pleasure might one day bring him back to Japan.

The number of Japanese subjects who received Orders of Merit from the Emperor last year was 3,905, including four ladies. The number of foreigners similarly honoured was 219. Finally the number of Japanese who received foreign orders was 102; namely, 8 from Russia; 16 from France, 3 from

Portugal, 7 from Prussia, 5 from Belgium, 34 from Germany, 5 from Austria, 5 from China, 1 from Holland, 6 from Italy, 5 from Spain, and 7 from Turkey. As usual England's name is conspicuous by its absence, and Germany's stands at the head of the list.

The Diet did not meet on Monday, the Committees alone being at work. Until the Budget Committee, or the special committee entrusted with the duty of examining the railway bill, is in a position to present its report, meetings of the Houses would be of little use.

Speaking at a meeting of the Tradal Society, Mr. Motono, Japanese Representative in Brussels, said that Belgium is well able to lend money to Japan, since her annual returns from foreign investments now amount to 150 million francs annually. But whether she would be willing to lend was another question. In the first place, she is not well posted as to the state of affairs in Japan; in the second place, she considers the Japanese too clever—a statement which Mr. Motono declined to put into more explicit terms; and in the third place, while willing to assist her own people's foreign enterprises, or enterprises undertaken by her own people in cooperation with foreigners, it is unlikely that she would assist foreigners, alone, or, at any rate, that she would do so on any basis not of the soundest character. What Japan has to do is to consider whether these conditions can be satisfied.

Captain Shiraiishi, who distinguished himself at the taking of the Taku Forts, has been restored to his rank in the Navy. He had been tried by Court Martial and sentenced to be deprived of his rank for causing the death of a sailor by harsh usage. Captain Shiraiishi struck the man a blow which proved fatal, though of course it was not given with any such intention. He was degraded and condemned to imprisonment, but in consideration of his services the Emperor has pardoned him.

Mr. Takemura Yorikata and two others have instituted legal proceedings against the Nippon Yusen Kaisha, on the ground that the decisions adopted by the last general meeting of shareholders were contrary to law. The particular points attacked are that a sum of half a million *yen* was set aside to form a fund for the extension of navigation, and the improvement of the fleet; that a grant of money was made to the family of the late Mr. Nakamigawa, and that a successor to the latter was not elected.

On the 6th instant about 100 fishing boats put out from Takashima in Shiribeshi, but in the evening only 72 returned, 28 being unable to make the shore. Six were cast away, several of the hands being lost, and the fate of 22 boats with 40 hands is still uncertain.

Mr. Wada, Engineer-in-chief of the Wakamatsu Foundry, is said to have tendered his resignation on the ground of ill-health, but the real reason is alleged to be the Government's refusal to endorse a supplementary estimate presented by him.

Consent has been given for the Imperial Household Department to purchase 3,000 shares in the Soul-Fusan Railway.

At recent gun practice at Kure, which members of the Lower House were invited to witness, a successful trial of an 8 in. quick-firing gun built at Kure Arsenal was made. The new piece is the first of its kind turned out by the arsenal.

JAPANESE FINANCE.

THE *Bulletin Commercial* of Brussels contains an interesting article on Japanese finance from the pen of a gentleman who has had for many years an opportunity of studying and investigating the affairs of this country. We translate the article:—

The fact is undeniable that Japan is at present undergoing a commercial crisis. But for the business man the essential point is to know the nature and the importance of this crisis. Let us then examine the budgetary situation, properly called, and the general financial situation.

The *post-bellum* programme that the Japanese Government traced in 1896 is known. The funds required for executing the programme were to be obtained, on the one hand, from the Chinese indemnity, so far as the armament of the country was concerned, and on the other, from domestic loans, the proceeds of which were to be specially appropriated to public works. This programme was being faithfully carried out when the revolt of the Boxers in China led to a considerable augmentation in the expenditures of the empire. In the last accounts alone they mounted to 28,600,000 *yen*. The existence of a special fund of 50 millions of *yen* enabled these extraordinary outlays to be met without disturbing the budgetary equilibrium. Nevertheless, foreseeing the continuance of these expenditures and desiring to restore the special funds to their original state, the Government had recourse to an increase of taxes, obtaining thus an additional revenue of 21 million *yen*. Thus the Government was able to balance its budget as follows:—

	<i>Yen</i> .
Ordinary Receipts	207,540,000
Extraordinary Receipts	69,956,000
Total.....	277,496,000
Ordinary Expenditures	164,675,000
Extraordinary Expenditures	111,212,000
Total.....	275,887,000

It has been seen that the public works were to be carried out with funds obtained from domestic loans. But in consequence of the peculiar economic situation of the country and tightness in the money market, the Government judged that a loan would be impossible, or at least that it would be very onerous, and it was not made. The natural consequence was suspension of the public works to which the funds thus obtained would have been applied. Works representing an outlay of 9 million *yen* were therefore suspended, and the Budget was perfectly balanced.

Onlookers prejudiced, or foreseeing a new deficit in a not remote future, expressed the opinion that the country was over-taxed and that it could not support new charges. That is an error, as attentive examination of the figures shows. It is true that the receipts of the State are now more than 200 millions, whereas they were only 85 millions ten years ago. At first sight one might conclude that the nation's burden has been augmented in the same proportion. It must

not be forgotten, however, that the ordinary revenue in Japan includes receipts from her enterprises and her domains, such as railways, posts, telegraphs, forests, &c. Now it is precisely these receipts, or rather their increase that has contributed to augment the amount of the general revenue. Thus, whereas they totalled only 8 million *yen* in 1891, they to-day exceed 97 millions. It is impossible to pretend that this increase of receipts has augmented the national burdens. The same phenomenon has occurred, as the following table will show, in various other categories of receipts—the figures are given in thousands of *yen*:—

	1891.	1901.	Actual.	Per cent.
Land Tax	37,451	46,560	9,110	24
Income Tax	1,110	5,600	4,500	394
Customs Receipts	4,530	15,620	11,090	244
<i>Sake</i> Tax.....	14,680	55,000	40,320	274
Tobacco Monopoly.....	1,790	9,610	7,820	436
Various	10,250	17,020	6,770	66

It will be seen that the tax on *sake*, for example, which produced only 15 millions ten years ago, brings to-day 55 millions, or nearly the quadruple. Here then is a difference of 40 millions of *yen*. Further, the customs ten years ago gave only 4 millions; to-day they give nearly 16 millions. If account be taken of this special increase of receipts produced by *sake* and customs dues, the conclusion is arrived at that the direct taxes, instead of doubling, as is generally pretended, have only been raised from 53 to 83 million *yen*, an augmentation of less than 60 per cent.

Now is there any real augmentation? These 53 millions of 1891, may they not be equivalent to the 83 millions of to-day? In effect, in consequence of the adoption of the gold standard and of the industrial and commercial extension that Japan has achieved during recent years, the values of labour and its products have nearly doubled, so that the workman can get for his work to-day twice as many *yen* as he did ten years ago. Consequently, his tax-paying capacity is doubled, and it follows that taxes the double of those supported by him in 1891 would be only an equal burden. It will not be erroneous if, even leaving aside the rapid progress effected during the course of recent years in all branches of national industry, one affirms that the wealth of the country and its revenues have increased 100 per cent., or even 200 per cent., as the following table shows (the figures are in thousands of *yen*):—

	1899.	1891.	Increase.
Deposits in the Banks	72,000	564,000	683
Exports.....	70,000	214,000	205
Imports	66,000	320,000	233

The 53 million *yen* of direct taxes in 1891 would thus be equivalent to 106 millions, and since the actual taxes amount to only 83 millions, it follows that the charge borne by the Japanese subject has diminished by 25 per cent.

It has been stated above that undoubtedly at this moment Japan is passing through a financial crisis. But this crisis in itself is only natural. In principle it may be said to have been born of the disturbance of

equilibrium between fixed capital, on the one hand—that is to say, capital which takes the form of constructions destined for industrial purposes, machines and implements, lines of communication, etc.,—and, on the other, circulating capital; that is to say, capital which is consumed in each operation and which re-appears, transformed, in the new product, capital which includes raw materials destined for manufacture, manufactures themselves and money required for workmen's salaries and provisions. In most cases it is a disturbance of equilibrium between these two kinds of capital that determines crises, whether they are simply financial, or commercial and industrial as in Japan. Such was the case in Europe in 1847, and in America in 1856 and 1872 after the construction of railways *en masse*. Such is the case in Japan to-day. Circulating capital, which should serve to exploit fixed capital, has been itself transformed into fixed capital; coined money which should serve for exploiting mills and factories, and for purchasing the raw materials required to feed them, has been itself converted into the form of mills and factories. Japan has devoted the greater part of her capital to enterprises which, though giving her a considerable revenue, have absorbed the whole of her floating capital. Besides, during late years, imports have largely exceeded exports. This year, in consequence of the war in China and a diminution in the demand for silk and *habutaye* abroad, the ratio between imports and exports has been 6 to 5. This difference in favour of foreign countries, namely, 50 millions of *yen* or 125 millions of francs, has had to be paid in gold.

The direct result of this outflow of money has been an increase in the rate of discount and of interest.

The demand for ready money increasing without cessation, the Imperial Bank—the great regulatory bank of the country—suddenly raised its rate of discount, and the period of expansion of recent years has been succeeded by a reaction. Merchandise purchased not being able to be paid for, has accumulated in the warehouses and the public emporiums; credit has been contracted, and confidence has disappeared for some time. The same phenomenon has naturally been produced in the money market; stocks, shares and securities of all kinds have suffered considerable depreciation.

But to stop there would be to look at only the outside of the question. To infer the bankruptcy of the country from the crisis through which Japan is now passing would be to draw from the premises conclusions which they do not warrant.

We have just seen that the crisis had for prime cause the disappearance of floating capital, the disturbance of equilibrium between capital fixed and capital circulating. Let Japan recuperate this capital under one form or another, and her former prosperity will return, for the vital forces of the nation have not been affected; the sources of her wealth remain intact, not to say still un-

exploited; the basis of the national economy has not diminished, on the contrary, it has increased; her soil is covered with lines of communication; her railroads have multiplied; everywhere her ports and her navigable routes have been improved; her machines and her factories have been considerably augmented; the skill of her artisans has been developed in sensible proportions; the intellectual and technical capital of the nation has undergone considerable increase.

So soon as Japan possesses means to exploit the sources of her riches, the crisis will be removed. These means, in the eyes of the majority of her enlightened men, can be found only in a foreign loan; a loan which will place the State in a position to buy up the railways and thus to restore to circulation the enormous portion of floating capital which has been withdrawn. In order that this loan itself be possible, Japan must evidently work to bring her legislation and her codes into fuller harmony with foreign legislation, and it is necessary that the right of property in land and mines, as well as the right of hypothecation be accorded without restriction to foreigners.

THE WAR IN SOUTH AFRICA.

Since the controversy about the manner of conducting the Boer war has extended to the Far East and has been carried on in these columns, we think that our readers, Japanese and foreign, especially German, will be interested by the following extract from a speech recently delivered by the Secretary of State for War:—

THE CONDUCT OF THE WAR.

But Sir Henry Campbell-Bannerman has accused the Government and his country of a very grave matter. He has accused us of methods of barbarism in the conduct of the war. ("Shame.") I believe and I am here to uphold that no war at any time by any nation under such conditions has been waged with more humanity than the war in which we are engaged. (Cheers.) I will not carry you back to the old controversy about farm-burning, of which I will only say that in any case in which farm-burning was the result, as it was in many, of the fact that our soldiers were treacherously sniped from the farm after they had left it, or that our communications had been cut on the railway lines by organized parties proceeding from certain houses, or for other acts of treachery of which there have been too many in this war—I say in all those cases we have been too amply justified in carrying out the natural retribution which all civilized nations carry out for such offences. (Cheers.)

THE CONCENTRATION CAMPS.

But the great attack on which our opponents base themselves in this charge is in regard to the concentration camps. So long as every house in the Transvaal and Orange River Colony was used at once as a telegraph station, a recruiting office, and a refectory for the enemy, it became impossible for Lord Kitchener to ignore the necessity of relieving the country of the population which was rendering futile the exertions of our troops. Under those circumstances you have to consider not what their condition is now as compared with what it would be in time of peace, but what their condition is now as compared with what it would have been if they had been left on their farms. (Hear, hear.) You have not got to consider the difference between luxury and privation, but between starvation and great suffering and the less suffering we can arrange for. (Hear, hear.) I want to put this question as fairly as I can, but let me remind you, to a large extent the disease in the camps is due to this—that a large number of persons came in, some compulsorily, but a great number voluntarily, already half starved, because their resources were at an end, half clothed and with their bodies in a condition fit for the reception of disease. Under those circumstances a large death-rate was certain. The death-rate in these camps has been moderately large and has given me and my colleagues great anxiety. But remember that the statistics furnished and the comparisons made are necessarily inaccurate. You

cannot compare the death-rate of camps from which all the healthy males have been taken out with any ordinary death-rate.—(Hear, hear.) If you look only at infants, it has been pointed out to me within the last few days that in the 33 great towns of this kingdom the mortality of infants under one year was 248 per 1,000. In Portsmouth it was 325 per 1,000, in Preston 327, in Manchester and Salford 350, and in Birkenhead 362 per 1,000. Therefore, those who compare the death-rate in these camps, in which there are a large number of young children, with the ordinary-rate of the great towns are, of course, speaking without their host. I have heard of people who think that measles, however epidemic, cannot have much effect on the death-rate. But I have seen that the *garde mobile* of Paris during the siege had a death-rate of 40 per cent. in measles cases. The French soldiers in the Italian campaign who were similarly attacked had a death-rate of 40 out of 125 in one hospital. Remember that nobody knows the statistics of death in the houses of the Transvaal itself. Owing to the ignorance of the Boers and the absence of ordinary medical necessities comparatively few children survive; and we know this, that though they are a highly prolific race the increase of their population has not been equal to that of European nations under the same conditions. We have had to deal with great difficulties in these camps, we have had to deal with ignorance of ordinary sanitary laws, with concealment of disease, which has caused epidemics, with obstinate determination not to call in the doctor, and, as will be found from publications which will shortly be put before you, with the horrible and deadly concoctions—I can use no other word—with which the Boer women in their ignorance dose their own children when they are suffering from disease. We have throughout the last six months done everything which inspection and great care can suggest to ameliorate these conditions. (Hear, hear.) I neither apologize for the policy nor will I accept for the Government the whole responsibility for the loss in a country of which the capitals are in our hands but in which an irresponsible body of men are determined to make our communications difficult, and have been for months past engaged in looting our very convoys sent up to support their wives and children. When people talk about barbarism I want to ask them this question—What nation engaged in war has at any time, in any country, or under any conditions, endeavoured to feed, clothe, house, nurse, doctor, and educate 150,000 persons who have been left on their hands by the enemy, whom they have called upon, as Lord Roberts did on two occasions, to take over and maintain their own belongings, but who said they would leave them upon our hands?—(Hear, hear.)—I am not going to say anything about the breaches of the rules of war by our antagonists. I am not going to press this question of firing on ambulances or the professing to surrender and then opening fire again, or the firings on our wounded which have been established on various occasions, except to say in passing that these terrible breaches of the rules of war have never provoked any retaliation on our side or any divergence from the civilized law of quarter to our enemy.

BRITISH LENIENCY.

Nor am I going to labour, although I mention it in defence of the humanity of this country, the fact that the war has I fear, been greatly protracted by undue leniency in the treatment of rebels found in arms against the Sovereign under whom they have enjoyed the freest of institutions, or of breaches of parole by the Boers in the Orange Free State, which in their humanity have been permitted by our generals. I believe that to a large extent our present troubles are due not to that undue severity of which I hear so much, but to a leniency applauded at the time by all those who now condemn us, but forgotten now that the result comes in evidence against us.

HOW THE BOERS HAVE ELUDED US.

We may have paid heavily for our humanity, but there is one thing which on behalf of our armies in the field and our credit as a nation I am not going to allow to pass without notice, and that is the practice by which our enemies have been eluding us during the last few months. I am constantly asked, the question, "How is it, if you send this vast number of horses, if you have your columns, if you have good leaders, who are well equipped, that our men cannot catch the enemy? Is your intelligence defective; is your system at fault?" One explanation, not the only explanation, but a main explanation, is this—the system of our country and people with regard to the Kafir is different from the Boer system.—(Hear, hear.) The Boer columns have only too frequently in the last few months eluded our columns by hiding their tracks by murdering the Kafirs behind them. It is a serious charge, and I make it only for this reason that I had occasion to notice that in the secret intelligence reports so many cases were mentioned of the murder of Kafirs that I telegraphed to Lord Kitchener to ask whether this was a general practice, or whether it was

the action of isolated persons. His reply to me, which I receive only to-day, was:—"Cold-blooded murders by the Boers have been frequent of late." ("Shame.") He adds:—"It was only on the 10th instant (three days ago) two dead natives were found with their hands tied behind them down a main shaft at Greylingstad." The leader of a column, whose letter I saw not long ago, mentioned that he was within two or three hours of a column of the enemy whom he had been pursuing for a considerable number of hours. That was at a Kaffir kraal, and he found the place deserted, but in one of the houses he found four little Kaffir boys all under 12 all with their heads battered in two or three hours before. ("Shame.") Now, I do not bring this forward with the intention of making an impeachment against the whole Boer nation. I say that Lord Kitchener informs me of this, that he has sent a despatch on this subject and that this is in itself a most serious development of the war, and it is serious in this respect—that if this becomes more general it becomes the act, not of belligerents, but of bandit desperados who can no longer be treated as belligerents.—(Cheers.)

A LETTER FROM SOUTH AFRICA.

The following interesting letter from a Sergeant of Cavalry in South Africa has been placed at our disposal:—

MY DEAR MOTHER.—It is a very long time since I wrote to you, but we have been on a very long "trek" since then and have finally handed here, and have now only 17 horses in the whole Squadron.

As I wrote and told you last, we expected to go to Middleburg and then to Pretoria and rest. When we reached Middleburg we got a lot of horses and they packed us on the train and we travelled day and night till we reached Naauwpoort (where we first started fighting). We stayed there 4 days refitting and then started after the "Cape Rebels." We marched to Graaff Reinet, Bethesda, Willowmore, Uniondale, Barrydale, Ladysmith, Ondtchoom, Montagu, and went within 80 miles of Cape Town itself. Oh! by the bye, I visited Aberdeen (its a hot-bed of rebels). Some days we marched 40 miles, and never less than 30. Night and day it was just the same, we would get into bivouac about 7 p.m. and march again at midnight. We got very little to eat, as we could not commandeer anything, and we only had our saddle blankets at night and it was always very cold. At Graaff Reinet "B" squadron left us to go with another column and our 2 guns left us at Willowmore, so there were only about 280 of us. Round Uniondale "A" squadron got ambushed twice, losing about 8 killed and about 20 wounded. When we arrived at Uniondale Scheeper's Commando was round there.

We arrived on a Sunday and two troops of my squadron were sent out at night to hold the "nek." We had to climb the hill to it (3½ miles) so you may fancy the height, and we got there about 8 p.m., but Mr.— would not go down the other side till daylight. Well, we went down about 6 a.m. and went about 5 or 6 miles where we were told to halt and stay till the regiment came out in a couple of days. About 3 p.m. Scheepers drove all outposts in, and probably would have had us all only the other two troops came out and strengthened us and we held our own till dark when we retired to the "nek." Next morning the Colonel came up with "A" Squadron and kicked up a row about our not holding the position (?) so down we all went again and had not gone 5 miles before they started, and we had a terrible time of it for 6 hours. The Boers got nearly all round us; one troop managed to get to the nek first and save it. There were between 700 and 800 of them. All our ammunition was used up and we had to get away the best we could. We held on to two little ridges. The horses stampeded; no orders were given (in fact the Colonel had cleared). My troop was the last to come down and there were only about half a dozen horses left for us. Mine was shot dead (through the head and heart). Some of the men would not shift, so lay there till they were captured, some got away on spare horses. Another man and myself walked all the way back to the foot of the hill where we picked up two horses and rode up into the nek. I expected every minute to be hit as there was no shelter and the Boers were firing from three sides. The bullets were sending the dust up all round and you could feel the bits of stone hit you on the hands and legs. Three fellows offered us horses. You see some of the men made stands whenever there was a rock or cover, but I am sorry to say only a few. One of my corporals offered me his horse which I declined and he had not gone 20 yards before the horse was shot dead; another one I was offered was also killed. The third man wanted me to get up behind him but as I am not a circus rider I also said, "No thank you." However I got off. I was determined I wouldn't hurry for the Boers or anyone else and I did not.

I was angry about my horse being killed (she was a fine black waler and I had had her a long time). I was angry about everything and had 10 rounds in the magazine of my rifle with which I intended to make it hot for any one who tried to capture me. One of our young officers emptied his revolver and then threw it in one of their faces and then got off.

"A" Squadron had only one man hit on the wrist (grazed) as they were cut off on our right and had to go 15 miles round to get back to the neck.

"C" Squadron had 3 men killed (including our Sergeant-Major; he was a young fellow of 29 and has a wife and 5 children and has been through all the campaign; he was well liked); 2 officers and 12 men wounded, 28 taken prisoners and about 60 horses killed and missing, so we did well.

The whole thing was the fault of the Colonel and we have no good officers left. Major — has taken command of another column and taken Captain —, and Capt. —, with him, so we have only a lot of young lieutenants, who know nothing, under him. He knows nothing himself and although he was told about the Boers he would go on. Scheepers told the prisoners the colonel must have been a fool to come down. I would not have cared if he had tried to get us out of the mess. We had to stay 3 days in the neck till the 12th Lancers came about 80 miles with 2 guns to relieve us; they stayed with us till the day before yesterday at Laingsburg where we handed over all the best horses and took their bad ones and came down here, where we are to rest. We had several fights with Scheepers afterwards and got all the prisoners back, and if we had had a good officer in charge of us would have pretty well captured the most of them. We have been very badly off for food some days; only a couple of biscuits and a piece of goat's flesh, as sheep are scarce; and we had no change of clothing with us and no time to wash anything. Those who had money bought changes at the different towns. Altogether it was the worst time we have had since the war began. Of course there were times when we were very badly off before; then it could not have been prevented and no one grumbled, but now it is different. Simply gross mismanagement and incompetency on the part of the Colonel, and a want of the first principles of business. We followed Scheepers just on a thousand miles, driving him ultimately into Col. Crabbe's force, who killed two of his best commandants and a lot of his men, took 80 prisoners and 500 horses. They have most lovely horses, mostly stallions, and as each of them had three or four we had very uphill work with our worn-out horses. Poor brutes! We simply worked them till they dropped—some had sores on their backs as big as one's hand, as long as they could get along they had to do so. I was perfectly sickened with it all.

When we got to any town we were not allowed out without a pass and in fact we were treated more like dogs than men.

At Montagu a lot of men were sent to Ashton (about 6 miles off on the railway) to fetch horses, and as old Joe would never let them get anything to drink they had a real good time (you see all over the Colony it is Martial Law); you must have a chit signed by one of your own officers and then signed by the commandant of the town before you can get a drink of beer (2/6 per small bottle). Well this station had no troops and no commandant, and they all got speechless. Only nine of our Squadron got back with 17 horses. My troop had to go out at 5 next morning to collect the rest of the men and horses, Lancers, Artillery, and Hussars. I didn't go myself as I was Orderly Sergeant. We got 71 horses about and 20 men. To make matters worse, about a mile from camp a farmer had a farm (wine and grapes) and old Joe, being the senior officer, put a guard on this farmer's cellars to keep the men away. The 12th mounted guard about 3 p.m. and had to be relieved at 7 p.m. by one of ours (all drunk). At 10 p.m. same night ours were all speechless and had to be relieved by an Artillery picket. Morning came; Artillery ditto. Nearly all of "A" squadron raising the devil, singing all sorts of songs about the Colonel, upset his tent, and generally "painted things red." Consequently, 12 Lancers, 4 Artillery and 9 of ours got Courts Martial; all the officers were afraid to go to bed. Serves them right. They are the rottenest lot I have ever served under; what few waggons we have are loaded up with their *bills* and cases of champagne, &c., chairs for the mess, and yet the men have to go on half ration of biscuits and a piece of goat because there is no room on the waggons to carry it. Same with the horse forage. I don't mind going short myself, but when I think of the poor beasts having to go over that distance on 6 lbs. of corn a day it makes my blood boil. We got most beautiful horses at Ashton. Some colonial Americans and English. I got a lovely chestnut pony (or colt) but I gave him to a Captain of the 12th Lancers (Intelligence officer) so he will be well looked after. I sent all my horses to the 12th that were any good. They all look after their horses. All their waggons are loaded with forage and men's kits and rations.

We are all tired of it all. This is the first time I

have had no horse and been left clear since the war began and I don't want any more of it.

I have still got no troop officer, only Mr. — looks at it sometimes. He has been out only about 3 months, stutters, and knows nothing. I don't take any notice of him. Make my own arrangements and tell him afterwards. He doesn't mind, saves him trouble, and gives more satisfaction all round.

This is a terrible country, all hills and passes and great valleys between them (Karoo Mts.). One can only go along the roads (which are good as a rule). We were 16 miles from the sea once (Mossel Bay) but did not see it. It is very dusty, as a rule, and very cold at night, but hot in the day. The last three days have been very windy, and cold, more like March at home, but we have had very little rain.

I have nothing more to tell you at present. I hear the regiment goes to India when this war is over, but do not know yet for a certainty. I don't care much, myself, where we go as long as we get out of this country.

The people round here are the most disloyal lot you ever saw. All in favour of the Rebels. At a place called Mile River they had dinner laid out for them in the schoolhouse but, alas, "C" Squadron appeared on the scene with two guns and Jonathan had to clear with a loss of four killed and six wounded, and we ate their dinners and took the entertainers prisoners. It was all right too, bacon, fowls, roasted, boiled and curried, ham, but no desert, only plenty of coffee.

Now I must finish as I have no more to say.

This is not a very nice letter but I feel "bad tempered."

With love, your affect. Son.

Matjesfontein, Cape Colony, Sept. 14th, 1901.

FOOTBALL.

THE RUGBY MATCH.

A large crowd of spectators, among them many ladies, assembled on the Yokohama Cricket-ground on Saturday to witness the football matches. The climatic conditions were perfect, the sun flooding down from an almost cloudless sky, while the air was absolutely windless. The Rugby match with H.M.S. *Albatross* came off first. Yokohama began the attack, the Naval team starting three men short, and a try was very soon obtained. Goddard failed to convert however. Within the next five minutes the home side touched down again but once more the kick was ill-judged and the leather did not pass over the bar. By this time the missing players had turned up and the naval team settled down to steady work and the tide turned in their favour. Their passing from now on was much better than anything done by the Y. C. and A. C., and their work in the scrums, too, was infinitely superior. A fault on the home side was the hesitancy displayed in passing the ball, which spoilt several very fine rushes and prevented the team from scoring time after time. But this can be remedied by more earnest practice play as the season progresses. At half time the score was even, the Navy having also made two tries. On change of ends the visitors pressed, keeping the leather mostly in their opponents' territory. They piled up two more tries in this half, but just towards the close the Yokohama men broke away and secured a touch-down which was converted into a goal, bringing their score almost level with the visitors. Directly after the whistle blew and the game thus stood: H.M.S. *Albatross* 12 points; Y. C. and A. C., 11.

THE ASSOCIATION GAME.

Soon after three o'clock the Association teams took the field and put up one of the fastest and most interesting games we have seen this season. Yokohama began the attack the forwards rushing the ball right through the naval men, and they scored the first point from a scrimmage in front of goal within five minutes of the start. This put the *Argonauts* upon their mettle and by good wing play they worked the leather down the ground and shot for goal. Had the Yokohama goal-keeper been intent on his business he could easily have stopped this ball. As it was, he lazily put up one hand and the leather passed over his head. Soon after, by similar tactics on Pearson's part, another goal was made against his side. At half time the score stood two goals for the visitors and one for the home eleven. On change of ends the Yokohama men fell off somewhat and the Naval men scored two more goals, amid the rousing

cheers of their brothers-in-arms, who lined the field on both sides. These cheers eventually had an effect upon the local players, and amid a scene of great excitement J. E. Moss shot two capital goals in quick succession. But the pace was too hot to last in the fast-fading light and the whistle blew soon afterwards, leaving Yokohama one goal to the bad. Kilby at back was a tower of strength: the half-backs were not seen to such advantage, the brilliant forward play rather eclipsing them, still they put in useful work and fed the line with great discretion. J. E. Moss, Strome, and Drummond all deserve praise for their work. Teams:—Y. C. and A.: B. H. Pearson, goal; E. W. Kilby, W. B. Mason, backs; A. R. Firth, E. G. Fradgley (Capt.), W. J. White, $\frac{1}{2}$ backs; J. E. Drummond, J. E. Moss, O. Strome, H. Kilby, W. R. Le Marchand, forwards. H.M.S. *Argonaut*: A. Robinson, goal; J. Morrisson, R. Jarman, backs; W. Clissold, H. Hodge, W. Percy, $\frac{1}{2}$ backs; W. Brown, H. Ansley, T. Paton, R. Stevens, J. Callaghan, forwards.

SIX-ASIDE COMPETITION.

The following rules for the six-aside Association games to be played in Yokohama, have been issued by the Y. C. & A. C.:—Ground to be 80 yards by 60 yards. Goals, to be $3\frac{1}{2}$ yards wide and 8 feet high. Time, 15 minutes each way with 5 minutes interval. Off side, 2 men. Substitutes, if any man is unable to play a substitute shall be chosen by the Captains to take his place, for that occasion only. Goal-keeper shall not be allowed to handle the ball more than 20 yards from his goal. Drawn games to be replayed. The draw is as follows:—

TEAMS.

No. 1.	No. 3.
H. Kilby (Captain)	Firth (Captain)
Stephens	Le Marchand
Squire	Wilkinson
E. Powys, Jun.	F. O. Stuart
Cartwright	F. J. Hall
C. S. Moss	Eddison
No. 2.	No. 5.
J. E. Moss (Captain)	Drummond (Captain)
Mason	W. S. Moss
Marshall	W. Goddard
E. J. Moss, Jun.	A. W. S. Austen
Hayward	Crowe
Marquetti	Thorn
No. 6.	No. 8.
O. Strome (Captain)	F. W. Kilby (Captain)
A. W. Read	Edwards
Wheeler	Pollard
Waddilove	N. G. Maitland
Hellyer	H. Irvine
Graham	Meiklejohn
No. 4.	No. 7.
W. J. White (Captain)	Fradgley (Captain)
Van Smith	Alcock
Barnard	Pearson
Libaud	A. K. Owen
Thwaites	Reece
A. Kingdon	Helm

1st round to be played on 21st December, 1901. 2nd round to be played on or before 11th January, 1902. 1st round.—The ground will be reserved for the first round matches on the afternoon of Saturday, 21st December, and in the event of any game being undecided after that date, the same must be played off before the 5th January, 1902.

The return Rugby match between local players and the Fleet came off on Tuesday afternoon. There was a high north-westerly wind which interfered seriously with the play, which was consequently very rough and tumble. The home team secured two tries against a penalty goal by their naval opponents, thus scoring six points against their opponents' five.

THE FIRST SNOW.

The first snow of this winter fell on the 19th Dec. at 6.30 a.m. in Yokohama, and after continuing during about three hours ceased.

The dates of the first snow-fall since 1896 (the year the Yokohama observatory opened) are as follows:—

WINTER.	DATE.
1896.....	22nd Dec.
1897.....	6th Jan. (1898).
1898.....	22nd Dec.
1899.....	27th Nov.
1900.....	17th Jan. (1901).
1901.....	19th Dec.

FIRES.

On the evening of the 12th at 5 o'clock, fire broke out in the Tokyo Yoshiwara (Asakusa). Thirty-three houses were destroyed and four partially burned. Three persons were injured.

An Osaka message reports that shortly before 1 a.m. on Dec. 12th, fire occurred in the steerage accommodation of the steamer *Eiko Maru*, of the Osaka Shosen Kaisha, then anchored in that port. Despite the desperate efforts of the crew and assistance from the shore, the flames spread to the deck in a very short space of time and by 4.30 a.m., portions of the hull were destroyed together with a large quantity of cargo. A woman who was among the passengers, was burnt to death. The loss is estimated at over yen 30,000. The vessel was captured by the Japanese from China during the Japan-China War and had a tonnage of 390 tons.

About 1 a.m. on Tuesday, fire broke out in unoccupied premises consisting of four houses at No. 129, Yamashitacho, Yokohama, owned by a Chinese named Kan Kosho. The building was destroyed. The flames were fortunately suppressed before they could spread to the adjoining houses. The cause of the fire is believed to be accidental. There was a good supply of water; a steamer from Satsumacho was present as also the police floating steamer and so it was possible to confine the fire to the spot where it originated.

An incendiary fire was started on Dec. 17th on the premises of Sasaki Masakichi at 49 Sanchoe, Masagocho, evidence of recently applied kerosene being present. The fire was discovered early and immediately extinguished.

On the afternoon of Dec. 18th, fire occurred in the Osaka Club Hotel, Osaka, and the building was reduced to ashes. The fire is believed have originated in a stove. Several persons are reported to have received injuries. The hotel was insured in the Yokohama, *Meiji* and other Fire Insurance Companies for yen 70,000 altogether.

THE "KUMANO MARU."

On Monday the new screw steamer *Kumano Maru*, carried out a series of most successful trials in Tokyo Bay near Kisaradzu, when the vessel made a mean speed of 16.697 knots on the measured course.

This vessel has been built by the Fairfield Ship-building and Engineering Company (Govan) for the Nippon Yusen Kaisha's Australian trade, and is of the following dimensions:—

Length between perpendiculars.....	400 feet 0 in.
Breadth moulded	48 " 6 "
Depth moulded	30 " 0 "
Gross tonnage about	1,400 tons.

The *Kumano Maru* is of the three deck type, built of steel to class 100 A.1 at Lloyds and fitted out in accordance with the latest Japanese Government Rules and the British Board of Trade requirements for passenger steamers.

She is constructed on the cellular double bottom system, with water ballast right fore and aft from peak to peak holding about 650 tons, exclusive of peak tanks, in addition to which there is a deep tank to hold about 400 tons. The hull is divided into watertight compartments by eight steel bulkheads and the double bottom is closely subdivided by floors and girders so that risks of loss from collision or grounding are reduced to a minimum.

There is a long bridge deck, affording a splendid promenade for first-class passengers, with a shade deck above extending the whole length of the bridge deck and on which the boats are stored.

The first-class dining saloon and smoke room are on the bridge deck; and below the dining saloon there is accommodation for 48 first class passengers. The dining saloon and entrance are very tastefully ornamented, in old English style, the side paneling being white oak with chaste

pillasters of the same and lighted from above by a large skylight fitted with beautifully coloured glass windows in addition to the ordinary side lights. At the forward end of the saloon, forming an annex, there is the social hall with easy chairs and couches upholstered in silk plush and paneled in the same style as the saloon. The smoking room is at the after end of the bridge deck and is paneled in stained oak and upholstered in morocco leather. The first class passenger berths are very large and airy rooms, all well ventilated and lighted, and upholstered in tapestry.

The arrangements made for baths, &c., are most comfortable, all the baths and lavatories being quite adjacent to the rooms, indeed nothing more complete could be desired.

A bar is fitted near the entrance to the saloon on the bridge deck with the usual appliances for the supply of drinks of various kinds.

The second class accommodation is arranged under the poop deck, provision being made for 24 passengers. The state rooms are in many respects similar to the first class rooms and as there are almost equally good baths, lavatories, smoke room, &c., one might travel second class in this ship as comfortably as in the first class of many other passenger steamers we might name.

Steerage berths are fitted for a limited number of passengers in the forward and after compartments on the main deck.

A special feature of the vessel is the very elaborate and complete arrangements that have been made for heating or cooling and ventilating the cabins. Fresh air is blown into all the living rooms by means of electric fans, and this can be either warmed or cooled so that passengers can be supplied with air either at the natural temperature of the atmosphere or higher or lower according to the climate in which the vessel may be sailing; and as the amount of air supplied is under the control of the passengers themselves they can to a certain extent make the temperature to suit themselves. To get this result the air in cold weather is heated on its way to the rooms by passing over a series of steam pipes which raise it to the required temperature; it is then conveyed by steel trunks to the various compartments. Each cabin has its own adjustable louver, so that the amount of air admitted can be controlled to a nicety. There are no objectionable steam pipes in the rooms or steam heaters and as the air is in constant circulation, without being draughty, there can be no complaint of headache from over heated rooms. When, in hot climates, it becomes desirable to cool the rooms, this is done by passing the air over a series of pipes through which cold brine from the refrigerating engine is constantly kept circulating, the air is then conveyed to the rooms through the trunkways mentioned and controlled as already described. Four large electric fans are also provided for ventilating the holds through the usual cowl heads and there is a large chamber for fresh provisions where the temperature is always below freezing point. The vessel is lighted throughout by electricity and the electric light plant is duplicate to secure immunity from breakdown.

There is a complete outfit of winches, windlass, steam steering gear and other deck machinery, all of the latest design. The vessel is schooner rigged, with two pole masts, and with her high funnel and fine lines fore and aft presents a magnificent appearance.

The propelling machinery consists of one set, of triple-expansion surface-condensing engines, having three inverted cylinders working on three cranks. The high pressure cylinder is 31 inches diameter, the intermediate 51 inches, and the low pressure cylinder 85 inches, all adapted for a stroke of 4 ft. 6 in. The high pressure cylinder is fitted with a piston valve, the remaining cylinders with slide valves, and all are worked by the usual double eccentric link motion valve gear, controlled by combined steam and hydraulic reversing gear. The crank shaft is in three pieces each piece being built up and interchangeable, and, like the thrust and tunnel shafts, is of mild steel. The propeller shaft is of Morison's patent "Lockfast" iron. The propeller boss is of cast iron, and is fitted with four blades of manganese bronze. The engines have the latest im-

provements for economical working, including feed heater and an evaporator for producing fresh water to supply the boiler. An Edward's air pump driven by levers from the main engines is fitted, also a complete system of donkey pumps necessary for the special nature of the service in which the vessel will be employed. Steam is supplied by two double-ended and two single-ended boilers, made entirely of steel. Each of the double-ended has six Morison's furnaces, and each of the single-ended three, making a total of 18 furnaces, all adapted to work at 185 lbs. pressure.

To the above description—largely technical—of the *Kumano Maru*, some information may be added about Monday's trial trip. It had been arranged that an early start should be made, but owing to late arrivals, and preliminary testing of the boilers and valves, it was close on eleven o'clock in the forenoon before the ship cast off from her buoy. There was a large company on board, for whose comfort and enjoyment no effort was spared by Mr. Kondo, President of the Nippon Yusen Kaisha, his able assistant Mr. Ogawa, Manager of the Passenger Department in Tokyo, and Mr. Nagai, Manager of the Yokohama branch, while Capt. Haswell and his officers, so far as their duties would permit, devoted themselves to the same end. Among the guests were General Ijichi, Admiral Miyabara, Colonel Oshigami, Mr. Fukuzawa, Mr. Kawada, Capt. Matsumoto, Admiral Mori, (Harbour Master of Yokohama); Mr. Obata, (Member of the House of Peers); Superintendent Tsuda, of the Nippon Yusen Kaisha; Mr. A. F. White, Superintendent Engineer, Nippon Yusen Kaisha; Professor Purvis, Mr. F. W. Hammond (who is the representative in Japan of the Fairfield Yard); and in addition to these the managers of eighteen Nippon Yusen Kaisha branches, who have gathered in Tokyo recently.

The *Kumano Maru* got clear from her buoy about eleven o'clock and after about an hour's steaming reached the measured course where two buoys mark one mile, and a third at a distance of two miles makes the three miles run. A fresh northerly breeze told against three of the heats—if they may be so called—but on the other three runs before the wind the ship made most creditable time. Her average for the six tries was 16.697 knots, and her best speed was made running down wind on the second occasion when she did 17.143 knots. The vessel was light, and while one could tell on the superstructure that she was being urged somewhat, below the vibration was hardly noticeable. Altogether, the trial will, we doubt not, be taken as a complete success.

In the course of the early afternoon, the company sat down to an excellent tiffin in the fine saloon. Afterwards, Mr. Kondo, President of the Company, delivered a short speech in Japanese. Having thanked the guests for their presence, he remarked that at the outset of their enterprise designed to establish trade with Australia, the company put on the *Omi Maru*, *Tokio Maru*, and *Yamashiro Maru*. They did not have much cargo, and few passengers rewarded their initial essays, but as each successive trip showed an improvement new ships were put on, the *Kasuga*, *Yanata*, and *Futami*. Further development of the trade continued, and when the *Futami* was lost in the South Seas they decided to replace her with the *Kumano Maru*, which was 1,000 tons larger. He spoke of the various improvements which had been given effect to in the later steamer, calling special attention to the ventilating apparatus for cooling and heating the air throughout the ship, and expressing the hope that these fittings, over which no expense had been spared, would be appreciated by the travelling public and result in increased patronage of the line.

Prosperity to the *Kumano* was very heartily drunk, after which Admiral Ijichi, on behalf of the guests, expressed their thanks for the hospitality of the company's representatives and their best wishes for the prosperity of the line.

The weather was delightful throughout, the wind, which had been rather searching early in the day, dropping towards evening, and Capt. Haswell brought his ship and an exceedingly delighted company of passengers alongside the Pier shortly before four o'clock. The *Kumano* sails for Australia about the 21st of December.

KOREAN NOTES.

(FROM OUR CORRESPONDENT.)

The failure of the rice crop and consequent distress among the people has attracted the anxious attention of the Government. An organization has been formed within the last few days with the object of relieving the sufferings of the aged, widows and orphans. His Majesty the Emperor, has sanctioned the society and graciously contributes *yen* 10,000 and His Imperial Highness the Crown Prince follows with 5,000. The intention seems to be to establish a bureau with a full quota of officers and then give systematic relief to those in distress. This number must be very large according to all reports.

We notice in to-day's issue of one of our local dailies that the editor, in company with a foreigner, happened to be at Chong-no (Big Bell) when an official with attendants on either side came by in a covered chair. The attendants were clearing the streets with a vigour and vociferation that would have been creditable in *ante-bellum* days. The foreigner commented on the scene that such things were possible only in barbarous or semi-civilized nations. The editor tells us he replied to this by remembering the condition of the masses in other countries prior to their having become civilized. He says he thought of Turkey where death is meted out even now to any one who is disrespectful to a superior officer; he thought of Japan in the days of the *samurai* when life was in the hands of the feudal lord and of the assault on an Englishman whose death cost the Japanese Government an indemnity, and of the German in mediaeval times, who, travelling in a lordly region on a cold day, ripped open the body of one of the peasantry to warm his hands in the wound. Compared with such doings the editor thinks the vigorous clearing of the streets for a passing official can readily be controlled and changed when the country becomes "civilized." Korea is beginning to compare herself with other people and is rather complacent over it, if this editorial is to be taken as a criterion.

A few weeks ago, the pupils in the German Language School started a debating society. They discussed the advantage of forests to Korea to begin with, and then ventured on the desirability of young Koreans studying abroad. The question was discussed on both sides with considerable vigour, and one young man remarked that a foreign educated Korean on his return to his own country would be apt to find himself in the hands of the Police Department. He was ruled out of order by the Chairman and the matter was dropped. The affair was reported to the Minister of Education and reached the Palace. A strict investigation was ordered; the Korean tutors of the school were arrested; the Chairman sought refuge among foreign friends; his father was arrested and then he surrendered himself. He soon found himself in the city jail, after a week's delay or more he was tried, and pronounced guiltless of any attempt to reorganize the people's party and hold session at the Big Bell in front of the Imperial Palace gates. The young man, a lad of but seventeen, is still in confinement.

The story travelled and when it reached some thirty and forty miles in the country was something as follows:—The Christians, Catholics and Protestants, 3000 strong, entered the palace and held meetings. There hundred were arrested, the rest escaped and the leader is in hiding at the house of a foreigner and has not been captured. This, let us hope, an exaggerated report of "Korean mirrors." No wonder countrymen are bewildered and alarmed when such reports are carried by our men in scarlet livery.

Another subject that is attracting the attention of our statesmen is the erection of houses in the immediate vicinity of the Imperial Palace more than one storey high. The foreign representatives when appealed to agreed to accede to the request not to allow houses three storeys high to be erected but the Japanese Minister is reported to have withheld his consent.

The *yen* is at a premium of 54 over the Korean dollar, or, to be exact, over the nickel, which is still going down.

The electric railroad is not able to run cars longer than seven o'clock in the evening on account of the scarcity of water. Some people in the city here, it is reported, travel a long distance to get water for private use, while whole villages in the country are deserted on account of absence of water.

This budget of notes deals largely with rumour and one more may not be amiss. An English paper, a weekly, is to be started with the beginning of next year. This under Korean auspices.

Söul, December 6th, 1901.

YOKOHAMA LITERARY SOCIETY.

There was a very large attendance at the fortnightly meeting of the Yokohama Literary Society held at Van Schaick Hall, Bluff, on Friday evening. The lecture was delivered by Prof. E. B. Clarke, who took for his theme, "Tennyson's view of Immortality." In a cleverly constructed essay, the speaker traced the development of Tennyson's intellectual speculations from the early years of the nineteenth century, when the Poems by Two Brothers fell almost still-born among an unresponsive public, until the close of the poet's well-filled life when the fears, doubts, and visions of youth and middle-age had resolved themselves into a sure and certain hope of a glorious resurrection and a life hereafter. Mr. Clarke quoted freely from the poet's works, and concluded his paper with the beautiful lines which we have grown to look upon as Tennyson's farewell to earth, "Sunset, and evening bell." The lecturer was loudly applauded at the close.

The second part opened with an overture by Mrs. J. Strauss and Mr. A. Mason, *Schumann's* "Genoveva," which was brilliantly executed. Then Mrs. J. Pender Mollison gave an exquisite rendering of *G. Papini's* setting of Tennyson's "Elaine, the lily maid of Astolat." The violin obligato was taken by Mr. Max Schlüter, who played in his most finished manner. The audience were so delighted that an encore was demanded and graciously given. Mr. G. G. Brady next recited in a spirited manner Tennyson's immortal story of the fight of the little *Revenge* and the death of that grand old English seaman, Sir Richard Grenville, whose name is still a household word in the West Country, and Bideford town especially. Mr. Brady has seldom done finer work than this, and he was recalled, but had to decline an encore owing to the fatigues of a rehearsal of "The Balloon" earlier in the evening. The fourth number brought out Mr. H. A. Poole with his violin and he played in a tender, charming style "Spring's Awakening" (*E. Bach*) and "Serenade" (*Pierre*). Mr. Poole's advance in musical knowledge and command of the technique of his instrument is most noticeable this season, giving promise of greater things in the future, and it was not to be wondered at that the audience asked for an *encore*, which he kindly gave. Another song by Mrs. J. P. Mollison, "Awake" (*Philisier*), and "The Kerry Dance" (*Melloy*) by Mr. A. Henry Atkinson brought a very delightful programme to a close.

LAW CASES.

The case of Mr. Otani Sobei, butcher, No. 90, Nichome, Motomachi, Yokohama, against Mr. J. B. Hammond, No. 108, Yamashitacho, claiming payment of *yen* 87, which was to have been heard at the Yokohama Chihō Saibansho on Friday morning was postponed *sine die*.

A Tokyo paper says that on Dec. 14th judgment was delivered in the Tokyo Appeal Court in the case brought by Mr. J. H. Ranger, late of Yokohama, against Mr. P. B. Clarke, of the Maples Hotel on the Bluff, Yokohama. The latter was sentenced to major imprisonment for 15 days and to pay a fine of five *yen*. The affair it may be recollected, originated in statements made by Mr. Clarke on the 24th of June this year at a general meeting of the Maples Hotel, on which Mr. Ranger filed a suit in the Yokohama Chihō Saibansho against Mr. Clarke, who was found not guilty by that court.

Not satisfied with this verdict, the plaintiff carried the case before the Court of Appeal, where judgment was announced as mentioned above.

We understand that the decision in the case, *Ranger versus Clarke*, was given by the Tokyo Court of Appeal by default, defendant being unable to be present owing to illness. A doctor's certificate to this effect, through some unaccountable delay, did not reach the Court until after the judgment had been given. Under the circumstance, Mr. P. B. Clarke has raised a protest through his Counsel and the finding will be reopened.

We learn that F. S. Mayer was arrested at Seattle on the 6th inst., at the instance of the Russo-Chinese Bank, and will be detained till the arrival of extradition papers from Japan. He will be charged with forgery and the obtaining of money under false pretences. It is alleged that he forged a number of Japan Laundry debentures. Mayer with his wife and family, left Yokohama by the N. Y. K. steamer *Shinano Maru*, on Nov. 19th.

At the German Consulate, Yokohama, last Saturday, an enquiry into the circumstances of the collision between the German steamer *Nürnberg* and the *Ohama Maru*, a Japanese sailing vessel, in Moji Straits on Dec. 6th took place, says the *Nichi Nichi*. The paper further states that in compliance with the request of the Bikan Water Police the Chief of the Yokohama Water Police visited the Captain of the German steamer on Dec. 13th when the latter entered Yokohama harbour via Kobe, but the Captain stated that as reports relating to the case had already been forwarded by him to the German Consul in this port the matter would be dealt with at the German Consulate.

The case of the Petersen Engineering Co., Ltd., No. 113, Yokohama, *versus* Mr. T. H. Box, No. 114, claiming evacuation of premises held by the latter, which was to have been heard at the Yokohama Chihō Saibansho on Monday morning has been postponed indefinitely.

A case brought by Mr. Nagase Shinhachi, No. 61, Ichome, Kotobukicho, Yokohama, against Mr. F. Retz, of No. 59 Bluff, claiming *yen* 136.415 damages, which was to have come up for hearing at the Yokohama Chihō Saibansho on Wednesday, has been postponed *sine die*.

In the Yokohama Chihō Saibansho on Thursday afternoon, before Judge Kano, was heard an action brought by the Chartered Bank of India, Australia and China, No. 58, Yokohama, against Ah Leng & Co., Chinese tailors at No. 12, Yokohama. Plaintiffs were represented by Mr. Akiyama and defendant by Mr. Ideura. Plaintiffs claimed from defendant payment of two cheques, one valued at £200 and the other £118.9s. 5d. (*yen* 3,143.77 in Japanese money), with interest at six per cent. per annum from the 22nd of November this year until the execution of judgment, costs of the case to be borne by defendant. Counsel for plaintiffs stated that his clients received two bills from a firm in London some time ago which were endorsed by defendant who however failed to effect payment afterward. Counsel for defendant stated that his client was in a very miserable condition since the fire of Nov. 17th, in which his house and property were destroyed and consequently he begged the Court that the case should be deferred to some future occasion when his client might be able to comply with the plaintiffs' request. The proceedings were adjourned till Dec. 24th.

The Paris correspondent of the London *Times* quotes and contrasts two articles in the *Journal des Debats* and the *Triumph* respectively on the subject of the German attacks on Mr. Chamberlain for his Edinburgh speech. The article in the *Journal des Debats* is calm and moderate. It traces in the attacks profound hostility to Great Britain on the part of the Germans, and concludes that the Boer War is only the occasion, not the cause for the display of Anglo-phobia which existed before the outbreak.

ORGAN RECITAL.

As a contrast to the well-nigh unceasing round of gaieties which crowd upon us just now, a "very solemn music" was given on Monday, the 16th, at Christ Church, for the benefit of the Building fund.

The programme was selected entirely from the works of the German composer Mendelssohn: and curiously enough the majority of the numbers were vocal, which is rather an Irish way of carrying out an "Organ" recital. The Church choir was reinforced for the occasion by a bevy of fair ladies, to whom the chief glory and praise of the performance is due.

The occasion is one which precludes serious criticism. What though the *tempi* were somewhat funeral, and in places lacked the *feu sacré*:—yet the ladies sang charmingly; Mr. Vincent did his best under the circumstances, displaying with his accustomed skill the imperfections of the poor old instrument provided for his use: and we spent a pleasant, if sombre, evening. And the Church debt is reduced by the money for tickets sold: so "all is well that ends well."

We append a skeleton programme:—

Organ Solo..Overture for Military Band...Mendelssohn
Vocal Music..Excerpts from "Elijah" (24) "
Organ Solo....."Transcriptions"..... "
Postlude....."War March" (Athalie)... "

DEATH OF MR. G. E. RICE.

The death of Mr. George E. Rice at Nagasaki on Tuesday, from dropsy, removes a once well-known figure among Yokohama residents. Coming to Japan in 1868, he filled various appointments in the American Consular service at Hakodate, Tokyo and Yokohama until 1885, when he took up with commercial pursuits. His wife, who will long be remembered in Yokohama as one of the cleverest amateur actresses ever seen on the local stage, and also as an agreeable magazine writer, died last year, much regretted, but his three daughters survive him, and to them we extend our sympathy in their loss.

LITERARY GOSSIP.

Mr. George Lynch, who first came prominently before the public as a war-correspondent for the London papers during the last days of the Spanish domination in Cuba and subsequently won fresh honours by being captured by the Boers in South Africa while riding a horse painted khaki-colour, saw something of the Chinese trouble and has now brought out the inevitable book. Longmans publish it under the style of the "War of the Civilizations." It is notorious in the Far East that Mr. Lynch did exceedingly well out of "loot," and that the "showing up of the missionaries" which he threatened has not yet come off. We note that for part of the story of the Siege of the Legations he employs the narrative of Chuan Sen, an English-speaking Chinaman employed in the Tsungli-Yamen at the time; and the literary remains of Mr. de Courcy, of the Customs, who has since died. Mr. Lynch writes very sympathetically of the Chinaman and finds much justification for the new ideas of nationality which have sprung up of late among the erstwhile apathetic Sons of Han.

One of the most pathetic books issued in London this autumn is the journal written by Mrs. Susie Carson Rijnhart, M.D., under the title of "With the Tibetans in Tent and Temple." It was through the medium of the *North-China Daily News*, we believe, that the world first heard of the tragic disappearance of this heroic lady's husband, at the close of nearly four years of residence and journeying to and fro on the Tibetan eastern frontier. During those days they penetrated within a comparatively short distance of Lhasa—within 150 miles, that is, and, as distances go in that part of Asia, it was comparatively close. Earlier in the journey they lost their year-old son, and both went on with heavy hearts. The story before us is largely personal, and is sad; but Mrs. Rijnhart seems to have kept up her resolution in a wonderful manner, whilst the demands on her physical strength must have been of the most

arduous nature. Left alone on the disappearance of her husband—for their boys had left a few days before, succeeding a robbery of most of their horses—she had to wend her way to Jyekundo, and thence to Ta-chien-lu, a journey that occupied two months. During that time she—being a woman—was not permitted to enter any tents whilst amongst Tibetans, and frequently amidst frost and heavy snow had to pass the night in the open, and at times was plagued by the dogs that are always in such pressing evidence around Thibetan camps or tents. The roughness of the travelling was great, but the dangers were frequently far worse, and when we have finished the account we marvel at the fact that a woman should have finally accomplished it successfully. The riding or walking was often excessively bad, and the frequency with which the load would fall off the horse when slipping on the snow or ice necessitated the pack being restored with cold fingers and endless trouble. Add to this the difficulties and dangers of the guides, and we are left to marvel more. The mystery of Mr. Rijnhart's death has never been cleared up.

Messrs. Kelly and Walsh send us Macmillan's Colonial edition of Mr. Rudyard Kipling's *Kim*. We often wonder whether folks in the Far East realise how much better off they are in some respects than the people in the homelands. Here is a book, well-printed on good paper, with capitally produced illustrations, which we buy for one yen thirty-five sen, yet at home the same book cannot be had under 6/-, less booksellers' discount. The sale of *Kim*, we understand, has been as brisk in Japan as elsewhere. The book deserves it, for undoubtedly it is the finest thing that Mr. Kipling has achieved so far.

A beautiful cross, 2ft. high, has been erected by the Dowager Duchess of Argyll to the memory of her husband, the late Duke. It has been placed on a high cliff called Dun Dubh, situated at Macharinoch, about twelve miles from the Mull of Kintyre. On the landward side of the pedestal are the Gaelic words, "Bron air son Erraghael," being in English, "The mourning for Argyll." On the west is engraved a verse from a poem written by the Duke on an ancient standing stone near this spot:—

Remember! This the only voice from thee
No other follows from thy sealed lips;
With this thou greekest all the land and sea:
With this thou hailest all the passing ships.

On the east side is an inscription in Latin:—"Viro Optimo Dilectissimo Desideratissimo." On the side facing the sea is inscribed:—"To the beloved memory of George Douglas, eighth Duke of Argyll, K.G., K.T., Ina Argyll, his wife, has erected this cross." On each side of the inscription are the dates—April 20th, 1823; April 24th, 1900.

Dr. Furnival, in his introduction to the superb fine-art edition of *Lamb's Tales from Shakespeare*, which Messrs. Raphael Tuck have brought out this year, explains the causes which brought into existence the Shakespearian Quartos, genuine and spurious. As there was no copyright in those days, the company kept the words of the plays to themselves as long as possible. But the pirates were at work. They took down what they could, and they bought written "parts" from actors who happened to be open to corruption. Thus was produced a very imperfect version of the play, and this brought out in self-defence a genuine edition from the lawful proprietors. When a play was an immediate success a genuine Quarto was published at once, so as not to give the pirates a chance.

The readers of the *Academy* have decided that the following are the twelve best novels published in the first ten months of this year:—"Kim," "History of Sir Richard Calmady," "The Eternal City," "Tristram of Blent," "The Serious Wooing," "The Right of Way," "The Column," "The Octopus," "The Crisis," "New Canterbury Tales." A prize has been awarded to the sender of the list most nearly approximating to the above, and the results show that novel readers think very much together. The winner of the prize named eleven out of the twelve books selected by plebiscite.

THE HOKKAIDO.

According to official investigations, reproduced in the columns of the *Tokyo Asahi*, the productive power of the Hokkaido in a year is put at yen 34,534,312 in value, as will be seen from the following table:—

	Yen.
Agricultural products	12,216,214
Marine products	12,631,056
Mineral output	3,716,018
Industrial output	5,971,015
Total	34,534,312

It is anticipated that the productive power in the island will amount to something like 300 million yen annually in the future, when the island is sufficiently inhabited.

The report further says that during last year there were 48,118 emigrants representing 12,047 families, most of whom were engaged in agricultural pursuits. Ishikawa prefecture stood at the head of the list in supplying settlers and was followed by Niigata, Toyama, Aomori, Fukui, Akita, Yamagata, Tokushima, and Kagawa prefectures. At present, Ishikari province is attracting numerous emigrants, who now number one-tenth of the total population and there come next Oshima, Shiribeshi and Tokachi. The Kurile group and Nemuro are said to contain very little settlers.

At present, coal and timber constitute the principal exports of Hokkaido. During last year, some 107,250 tons of coal amounting in value to yen 845,968 were exported to Hongkong, Singapore and other Asiatic parts from Otaru and Muroran. The export of timber, mostly railway sleepers, to Talienwan and Newchwang amounted to 752,244 koku, representing yen 1,962,296 in value. The following table shows the imports and exports to and from the island during last year:—

	Exports. Yen.	Imports. Yen.
Hakodate	2,127,579	2,904,605
Otaru	770,932	301,929
Muroran	1,077,143	—
Kushiro	—	84,691

HIGH CHINESE HONOUR FOR SIR ROBERT HART.

A Chinese Imperial Decree of the 11th inst., appoints Sir Robert Hart, Inspector-General of the Chinese Imperial Maritime Customs, to the brevet rank of a Junior Guardian of the Heir Apparent, in recognition of the valuable assistance and advice given by him during the Peace negotiations. The *N. C. Daily News* says this appointment does honour to the Throne as well as to Sir Robert. It gives him the rank of a Viceroy, an honour which he has well deserved by his untiring and single-minded devotion to the interests of China; while we honour (the paper continues) the Throne for having recognised the value of his services and raised him to a rank which it would not have been thought possible only a few years ago that a foreigner could attain. It is one of many recent hopeful signs that the Throne is really shaking off some of its old illusions and prejudices and opening its eyes to realities; and while we most heartily congratulate Sir Robert, we feel that the Throne in recognising his merits, has coincidentally honoured all foreigners in China and gained a higher appreciation for itself.

AMERICAN TOPICS.

Senator Shelby Cullom, of Illinois, has succeeded the late Senator Davis, as chairman of the Foreign Relations Committee of the U.S. Senate.

The U.S. navy last year burned 324,108 tons of coal, at a cost of \$2,273,111. Ten years ago the coal consumption was 73,000 tons per annum.

Wife desertion is made a felony in Minnesota under a law passed by the last Legislature, and the first conviction under the statute has just been recorded.

Admiral Schley has positively declined to accept a public subscription to cover his financial losses through the expenses incident to the holding of the naval court of inquiry.

An American Bridge Company has secured the contract for twenty steel bridges on the Uganda Railway, the cost to be a million dollars. The Company beat the English and foreign tenderers both as to cost and time of completion.

According to the *American Agriculturist* the average yield of corn per acre this season is 17.4 bushels. Assuming that the corn acreage finally harvested is 81,515,000, and applying the estimated rate of yield, the total crop is 1,418,849,000 bushels, the smallest since 1894.

Wyoming is one of the few states in the Union which gives woman the suffrage on the same plane as man, and it is the only state which employs a woman as a prison chaplain. The latter is Mrs. May Preston Sloeson, wife of the vice-president of the faculty of the Wyoming State University.

The Rev. Charles H. Brent, Bishop-elect of the Episcopal Church in the Philippines, definitely announced his acceptance of the office conferred upon him from the pulpit of St. Stephen's Church, Boston, on Nov. 17. It is understood that Mr. Brent's consecration will take place about Christ mass time.

An American exhibition is to be held in the Crystal Palace, London, from May to September, 1902. The plans of the managers of this exhibition include the placing on view of exhibits of machinery, natural and agricultural products, food products, vehicles, lighting, heating, ventilating and sanitary appliances, textile fabrics, musical, photographic and optical instruments, an educational and scientific exhibit, naval and military ordnance and small arms, a complete art department, and a woman's section.

A new agreement for the regulation of immigration to the United States through Canada has been entered into by U.S. Commissioner Powderly with the representatives of the principal railroad and steamship lines of the Dominion. This agreement, which is to take the place of one which expired a short time ago, provides for the inspection by United States commissioners of alien immigrants destined for the United States at Halifax, N.S., Quebec, Port Levis, Vancouver, St. John, N.B., and Victoria, B.C. Complete manifests of all alien passengers are to be furnished by masters of vessels to the United States commissioners.

At the last session of Congress an appropriation of \$1,000,000 was made for the erection of a soldiers' home at Johnson City, Tenn. This institution will be different from any other in the country, for it will harbour under its roof Union and Confederate veterans of the Civil War and disabled soldiers of the war with Spain. The home is now being built. It will comprise thirty-five buildings. Among them will be a memorial hall, a mess hall, a chapel and a canteen. These will occupy a site a mile and three-quarters long and three-quarters of a mile wide. The home is located in the heart of a mountainous district. The grounds are to be laid out by a landscape gardener. Each of the barracks will have a park of its own.

A San Francisco paper prints with much complacency the following New York telegram:—Mrs. Willie K. Vanderbilt, who was Miss Virginia Fair, was conceded to be the best-dressed woman at the brilliant assemblage at the horse show to-night. Her costume, which was no more rich nor costly than hundreds of others there, was conceded to be the embodiment of perfect taste and harmony. Briefly, Mrs. Vanderbilt's costume was as follows: Gown, apricot yellow, peau de cygne under fillet guipure, old yellow roses appliqued; hat, Parisian shaped, of white fur felt, burnt orange panne, yellow roses; wrap coat of white broad-cloth, faced with ermine and Irish point appliques; boa and muff, white ostrich plumes; gloves, ivory white suede, reaching almost to the shoulder; flowers, corsage bouquet of violets; jewels, diamond pins and lorgnette

chain. The costume is estimated to have cost \$1,885.

According to the *American Grocer*, the pack of tomatoes in New Jersey in 1901 will be 50 per cent. short of 1900, when the output was 815,102 cases. Last year's "put-up" in Maryland was 1,691,045 cases, but this year there will be a shortage of 30 per cent. In Indiana the pack will be 40 per cent. off. In Delaware conditions are favourable, still the output will show a decrease of 23 per cent. Four states—Maryland, New Jersey, Delaware and Indiana—will be short as compared with 1900 not less than 1,250,000 cases. It must be kept in mind that the total pack in 1900, estimated at 5,495,093 cases in the United States, fell 1,659,830 cases below the output in 1899, when the total reached 7,154,923 cases. The carry-over from 1899 made good the short pack of 1900. It is evident that the total pack this year will not be far from 4,000,000 cases, or fully 2,250,000 cases below the average annual output of 6,350,774 cases for three years, 1898-1900.

The projected treaty of cession of the Danish West Indies to the United States is not so well advanced as it hoped would be the case at this time, remarked a Washington correspondent on Nov. 17th. It is now doubtful whether the treaty will be completed in time to reach Congress when it reassembles next month. The delay appears to have arisen through the change in the Ministry at Copenhagen, the State Department practically having reached an agreement with the Danish Government on the treaty, in fact all questions of large importance had been adjusted when the entry into power of a new Ministry not well disposed toward the new treaty made it necessary to begin the work all over again. While the negotiations are proceeding they have not yet reached a point where it can be predicted certainly that a treaty will result. The issues do not touch the price to be paid so much as the conditions relating to citizenship in the Danish West Indies, sought to be imposed by Denmark. The United States desires a simple treaty and one that will leave it at perfect liberty to deal with the islands without any restriction.

Commodore Albert Leary Gilson, the senior Medical Director of the U.S. Navy, whose death took place in New York on Nov. 17, was placed on the retired list in 1895, having reached the age limit of 62 years. Dr. Gilson received his education in Philadelphia and at Princeton College, and was professor of chemistry and toxicology in the Philadelphia College of Medicine and Surgery in 1853-54. He entered the Navy in 1855, and was in the sloop-of-war *Portsmouth's* boat on November 15, 1856, when it was fired on by the Chinese in the attempt to pass the Barrier forts in the Pearl river, near Canton, taking part in the engagements which resulted in the capture of the forts. He was on the brig *Perry*, cruising off the coast of the Southern States, when the Confederate privateer *Savannah* was captured. From 1862 to 1865 he was on the *St. Louis*, which was assigned to special duty hunting the privateers *Alabama*, *Florida* and *Georgia*. He was on board the *Idaho* when that ship was wrecked in the memorable typhoon of September 21, 1869, and for services in the Portuguese colony at Dilly, on the island of Timor, and to the Portuguese men-of-war *Principe Dom Carlos* and *Sa da Banteria*, received from the King of Portugal, with the consent of Congress, the decoration of Knight of the Military Order of Christ. For services to the British men-of-war *Plymouth* and *Dartmouth* he received the thanks of the British Government, and for similar services to the French gunboat *Scorpion* those of the commander-in-chief of the French East India station. At the request of the chief of the Bureau of Medicine and Surgery he designed and superintended the construction of the model hospital ship for the Centennial Exposition of 1876, and at that exhibition presented his ambulance cot, which was approved by the board of officers and adopted for use in the Navy. As a writer on medical subjects Dr. Gilson took high rank, some of his writings being in use as text-books.

NEWS OF THE WEEK.

Captain W. B. Seabury is to bring out the new Pacific Mail liner *Korea*.

Mr. Hayashi, Japanese Minister to Korea, will leave Soul on Dec. 25th for Tokyo.

Quite a severe shock of earthquake shook up Yokohama about twenty-five minutes before two on Tuesday morning.

Vernacular papers say that in compliance with the request of the promoters of the Soul-Fusan Railway the Imperial Household Department has subscribed for 3,000 shares of the company.

An American soldier on a transport anchored in Nagasaki harbour was robbed of a cheque for yen 800 and \$200 in gold, in a hotel at Ouramachi, a few days ago.

The tiger-tamer of Harnston's Circus was mauled at Rangoon on Nov. 19th. He had a narrow escape. The beast refused to jump a flaming bar, and attacked the tamer, who was removed to hospital.

The Treasury redeemed Tokyo City Loan Bonds to the extent of yen 200,000 on Dec. 16th when the following were drawn:—45 yen 1,000 bonds; 200 yen 500 bonds; and 550 yen 100 bonds.

Mr. Nose Tatsugoro, formerly Japanese Consul in Chicago, left Yokohama on Tuesday for Montreal, Canada, by the steamer *Kaga Maru* to take up his new duties at the Japanese Consulate which has been opened there.

The Iyo Steamship Company has sold its steamers, No. 2 *Hijikawa Maru*, No. 3 *Hijikawa Maru* and No. 4 *Hijikawa Maru* to the Osaka Shosen Kaisha for yen 75,000. As already reported, this steamship company was dissolved on Dec. 14th.

The Japanese steamer No. 3 *Sakaye Maru*, belonging to Mr. Orito Tomosaburo, Tokyo, was wrecked during the storm, off Nagaoka-mura, Shima Province, on the night of the 17th inst. Twelve passengers and the crew are missing. Seven were rescued.

When the White Star steamship *Doric*, which was due in San Francisco on Nov. 26th, sailed again for the Orient she was to carry a new chief officer, Harry Gaukrodger, formerly second officer of the *Belgic* and more lately first officer of the *Georgic* on the Atlantic side.

Rumours are current that the Government intends to sell the Wakamatsu Iron Foundry to private individuals. The *Jiji* says, judging from the fact that no supplementary appropriation in favour of the foundry is included in the Budget for next fiscal year, the rumour may be credited to some extent.

It is reported from Munich that a nobleman named Hildebrand has presented to the Emperor Wilhelm II. the fine country seat, Villa Garda, near Chiarano, on Lake Garda in Upper Italy, and that the monarch has accepted the gift, but that he intends to make it a convalescent station for officers of the German army and navy.

A Japanese junk called the *Injo Maru*, towed by a steam-launch belonging to Messrs. Helm Bros., entered Yokohama harbour on Monday laden with about 3,900 cases of kerosene which have been recovered from the German steamer *Nymphé*, wrecked off Izu peninsula.

A reward of over 20 yen was given to Bun-kichi, a fisherman of Kannon-zaki, by the Captain of the German ship *Thekla*, which entered Yokohama a few days ago for the first time. About 7 p.m. on Dec. 16th when the fisherman was returning home he noticed off Kan-non-zaki, a vessel signaling for a pilot. He rowed off to her at once and offered his services, which were gladly accepted by the Captain.

Last Sunday, when an omnibus running be-

tween Kamenashi, Yokohama, and Hiranuma station was proceeding along Hanazaki-cho the horses took fright and became unmanageable. The result was that the carriage fell into the stream near by. Happily the carriage was unoccupied at the time, except by the driver, who had a narrow escape.

Rear-Admiral H. T. Grenfell, C.M.G., R.N., now in Yokohama, will proceed to the Imperial Palace to-day and be received in audience by the Emperor at 10.30 a.m. in the Phoenix Hall. The Admiral will be accompanied by his staff.

A ministerial crisis was stated in a London telegram of Dec. 10th, published at Osaka, to be impending at St. Petersburg with regard to Vannoffsky's proposed state university education. M. de Witte, Minister for Finance, opposes the project.

A camphor monopoly applicable to Japan proper and Formosa will be carried into effect in April next year, provided that the bill relating to it is passed by the Diet. The chief feature of the plan will be that the Monopoly Bureau of the Formosa Government will buy up camphor in a roughly refined form and after refining it, will export it abroad.

It is reported from Hakodate that some 14 Japanese fishermen belonging to the *Aiyo Maru*, a Japanese sailing vessel, who were lately arrested by Russian officials near Saghalien on a charge of having violated fishing rights, returned to that port on Dec. 16th by the sailing-vessel *Shinyei Maru*, the offence alleged against them having not been proved in the Russian Court.

At the semi-annual general meeting of the Tokyo Electric Light Company held on Dec. 12th the following business accounts were presented and passed unanimously:—

	Yen.
Net profits.....	137,346
To reserve	6,763
Dividend (10 per cent. per annum).....	129,499
Carried to next account	1,084

The *Victoria Colonist* said on Nov. 21st:—More liners are to be added to the fleet of large steamers which ply to the Orient from Victoria and other ports on this side of the Pacific. The additions to the 17 liners now engaged in service between British Columbia and Puget Sound, and Japan and China—all of which make Victoria their last port when outbound and first port of call inbound—will be two of the large steamers of the Leyland line, the British fleet recently acquired by the Morgan-Hill interests.

The following is from the *Bangkok Times*:—A smart engineering feat was accomplished on the gunboat *Sugrib*, which brought up the Vice-Minister of the Interior from the Peninsula the other day. Whilst the boat was at sea in rough weather one of the cylinder covers of the engines gave way—a rather serious accident. Mr. Nielsen the engineer in charge, deftly fashioned a temporary cover from a grid, and so effective a repair was made that the ship was able after a short delay to continue her voyage at full speed.

The Department of Agriculture and Commerce has a plan for opening an experimental botanical station in either Kanagawa or Shizuoka Prefecture in the course of next year, for which enterprise a sum of yen 18,600 has been included in the Budget for next fiscal year. The authorities intend to purchase about 3,000 *tsuho* of land suitable for the purpose and to cultivate thereon various species of fruits, flowers, grasses and trees, raised at home and abroad. Beside this, the authorities will devote attention to the matter of packing, preservation, manuring, etc.

George Graham, at one time a member of the Naval Yard Police, committed suicide at Hongkong on Dec. 5th by shooting himself in the head with a revolver. Graham came out to Hongkong with the 91st Regiment in 1888, and left the army in the following year to take service with the Naval Yard Police. He was for seven years in that body, and bore an excellent character.

He then went to Selangor to fill an engagement as warden in the gaol there, returning to Hongkong eighteen months later to join the Naval Store Department, where he remained for two-and-a-half years. He next took employment with the Canadian Pacific Railway Company, and was in their service until within a few days of his death.

The Kobe *Herald* translates the following London telegrams from the *Osaka Mainichi*:—The New York *Times* states that Newchwang would be safer in Japanese hands, and attributes the loss of trade to the Russian occupation of Manchuria. St. Petersburg reports acknowledge that passenger traffic on the Manchurian railway is temporarily suspended owing to the depredations of banditti.—The leasing of the Nicaragua territory is regarded as an equivalent in effect to an American protectorate over both Costa Rica and Nicaragua.

The C. P. R. steamer *Empress of China* took on board at Esquimalt about 180 men of the Royal Garrison Artillery who have been ordered to the Hongkong Station. On Nov. 28th H.M.S. *Sparrowhawk* arrived at Vancouver with a board of Military Officials, including Major Wynne, Captain McDonald and others, detailed to inspect the arrangements on board the C. P. R. liner for the quartering of the troops on the voyage. The Board expressed itself as highly pleased with the arrangements, individual officers remarking that the accommodation provided for the contingent excelled that of any vessel they had seen engaged in transporting troops.

The extension of the Yokohama Water Works was successfully completed on Dec. 14th after more than three years work and there is some talk that rewards should be given to the experts and officials who took charge of the undertaking. It is understood in this connection that a sum of yen 16,347 will be appropriated for the purpose and that a set of three gold *sake* cups will be given to the chief commissioner, a gold *sake* cup to each commissioner, a sum of yen 1,000 and three months' salary to the chief expert, three months' salary to the general manager, two months' salary to the overseer and a reward corresponding to one month's salary to clerks and other inferior officials and workmen.

A London telegram of November 19th, stated that the British Government had caused the detention of a British steamer which was fitting out, ostensibly for a pleasure cruise, at Victoria docks, on the ground that the vessel was laden with contraband of war destined for the Boers. A searchlight fixed to the steamer's mast brought her under suspicion, and it is said a subsequent search disclosed four field guns and quantities of raw material for the manufacture of powder, and that the vessel was fitted inside to accommodate 500 or 600 men. The captain of the vessel says the instructions from his employers directed him to call at Hamburg after leaving the Thames.

According to the *Kokumin Shinbun*, Japan's expenditure in connexion with the North China campaign was as follows:—

	Yen.
Sums appropriated.....	28,646,435
Paid out.....	22,815,927
Carried to next year	145,291
Balance	5,685,216

Classified according to each Department the expenditure stands as follows:—

	Appropriated Yen.	Paid Yen.	Carried to next year Yen.	Balance Yen.
Communications...	86,304	84,949	—	1,355
Foreign Office.....	228,784	177,756	—	51,027
Home Office.....	11,774	11,525	—	249
Treasury.....	189,800	170,855	—	18,945
Army.....	28,733,886	16,780,093	145,291	4,808,502
Navy.....	6,395,885	5,589,911	—	805,974

At a recent meeting of the chief officials of the Nippon Yusen Kaisha's Yokohama branch a resolution was passed to the effect that with a view to effect the more speedy transportation of goods from Yokohama to Tokyo the branch office will

hereafter, whenever application is made by Tokyo consignees, discharge all the necessary business required at the Yokohama Customs relative to the delivery of imported articles, the expense being, of course, borne by the applicants. Tokyo merchants are therefore requested to send in applications together with bills of lading to the Company's Tokyo office at Yedo-bashi, Nihon-bashi, so that goods can be delivered to them within the shortest space of time.

EUROPEAN NOTES.

We note that Mr. W. T. Stead and the Rev. Harold Rylett stood bail for Dr. Krause.

A London telegram printed by the *Kobe Herald* says that eight submarine vessels have been completed, and twenty-nine are in course of construction, for the French Navy.

The relatives of "Colonel" Lynch, who was recently elected M.P. for Galway, have been informed, in reply to an enquiry, that, if he comes to England to claim his seat, he will be tried for treason and bearing arms against the King.

Seven convicts escaped the other day from Dartmoor. Six were immediately captured after having been shot at. The seventh, named Yaxley, managed to get clear away, but after a night and a day was secured by some farmers with the aid of a dog, and is now back in prison again.

The Newfoundland dog Bouncer, which, with a beautiful little cart and harness, was given to the Duke and Duchess at St. John's, Newfoundland, as a present for their Royal Highnesses' children, was prohibited from landing at Portsmouth, under the regulations of the Board of Agriculture affecting the importation of dogs.

The *Indian Daily News* London correspondent, telegraphing on Nov. 24th, stated that public feeling against Lord Roberts was still running high, as when passing the Army football field at Aldershot enthusiastic cheers were given for Sir Reivers Buller. On a call for cheers for Lord Roberts hooting largely predominated.

The way they have in the British Navy is not always a very nice way, as a certain officer found on the night of 1st Nov. when he arrived at Portsmouth in the *Niobe*, one of the cruisers which has been accompanying the *Ophir* in her trip round the world. He was looking forward to at least a week's leave, which he thought he had well earned; but he found himself under orders to start for China, on a vessel sailing the next day. In such circumstances even the vocabulary with which naval officers are popularly credited proves inadequate.

Tobacco growing in Ireland (says *Country Life*) was a matter which attracted a good deal of attention a couple of years ago, and the Department of Agriculture for Ireland has been prosecuting experiments since, and has now for disposal a quantity of tobacco manufactured from the crop grown in various parts of the island in 1900. The Irish leaf has been manufactured into plug, roll, cut cavendish, bird's eye, cigars, and cigarette tobacco, and these are now offered for sale. The crop of 1899 sold, after payment of the duty of 3s. per lb., at a price sufficiently good to make tobacco growing in Ireland a profitable crop.

In appointing the Rev. J. W. Adams as one of his Chaplains in Ordinary, King Edward has paid a graceful compliment to the only clergyman who wears a Victoria Cross. Mr. Adams, who is now Vicar of Stow Bardolph, has had a remarkable career, and was awarded several medals for service in India and Afghanistan while acting as Army Chaplain. In 1879 he accompanied the expedition to Afghanistan, and during the battle at Killa Kazi several men of the 9th Lancers fell into a deep ditch, full of water. The enemy were close upon them. Mr. Adams rushed to their rescue, and, although up to his waist in water, succeeded in extricating them from the horses

which had fallen over them, and, notwithstanding the close fire of the Afghans, succeeded in getting them away. He lost his own horse, and had to escape on foot.

Replying to the query, who was the first European to explore Siberia, a writer in the *Anglo-Russian* says it was the Greek Aristeas, mentioned by Herodotus, who, about 560 B.C., appears to have penetrated east of the Ural chain as far as the river Tobol. This explorer, or goldhunter, left an account of his travels, now unfortunately lost. It will be remembered that the Greeks then had thriving colonies all along the northern shores of the Black Sea, and in the Crimea. Scarcely a day passes now without Greek coins and objects of art being dug up in the South of Russia, relics of the colonists whom Herodotus described.

We have all heard of the number of unhappy infants who, at the height of the war fever, had strange and weird collection of the names of British generals and scenes of victory bestowed upon them by patriotic parents. But even Master Paardeberg French Baden-Powell Rudd, of whom we were told, will hardly grow up to bear the burden of a heavier name than is borne by an elector in a provincial city, discovered by a correspondent while canvassing at the municipal elections. This elector's surname was Denmark, and his parents took a mean advantage of that fact to christen him Horatio Hamlet Prince. Why will parents commit these crimes?

A man named Gorda, who, according to a Vera Cruz paper, has just died at El Paso, was the last survivor of the firing party who dispatched the unfortunate Emperor Maximilian on July 19th, 1867. A member of the squad has died every year since 1866. Lots were drawn among a company of soldiers as to who should be selected for the distasteful work, and the men on whom the duty fell were themselves threatened with death if they attempted to shirk the business. Gorda was on escort duty with the coffin of Maximilian when, later in the year, the body was given over to the Austrian Admiral Tegethoff, to be conveyed to Austria for interment.

Sir Rowland Blennerhassett contributes to the current *Cornhill* some of his recollections of Cardinal Newman. The life Newman led at the Oratory was extremely simple:

Up to a very advanced period of his life he rose at five o'clock. At seven he said his mass; at eight he breakfasted; at nine he invariably returned to his study, where he remained till two or three o'clock. He always kept on his table the edition of Gibbon with the notes of Guizot and Milman, Döllinger's "Heidenthum und Judenthum," almost always the copy of "Athanasius" which had belonged to Bossuet, and which contained in the margin notes in the handwriting of the great bishop, the "last of the Fathers," as Newman delighted to call him. Newman had also always near at hand some Greek poet or philosopher.

Newman used to say that he owed little or nothing intellectually to any Latin writer with one exception; that exception was not St. Augustine but Cicero.

The half-yearly report of the British East Coast Fisheries Committee has just been issued, and is claimed by the fishery inspectors to be the most satisfactory on record. The shell-fishing, in particular, has been wonderfully successfully. Last year, in the height of the season, the average daily catch of crabs was 110 per boat in April and 150 per boat in May; and it was thought that these figures would not be beaten for many years. But this year the average was 290 per boat daily in April and 170 in May—an extraordinary increase. The explanation of it is that the fishermen are now reaping the benefit of regulations to which many of them strongly objected at first. The destruction of small edible crabs and lobsters for bait in the past was bringing the shell-fishery to ruin, and it is to the prohibition of this that the increase is ascribed. It seems likely to continue, for the fishermen report that in no previous year have they met with so many small crabs, the ground in many places being covered with them.

A supplement to the London Gazette, says the

Saturday Review, contained a proclamation by the King announcing that the new regal title would henceforth run:—"Edwardus VII., Dei Gratia Britanniarum et terrarum transmarinarum quæ in ditione sunt Britannica Rex, Fidei Defensor, Indis Imperator." The announcement was happily timed with the return of the Duke of York from the first complete royal tour of the British Empire; and will be accepted both at home and in the colonies as a fit acknowledgment of the loyalty that girdles the British nation. But the wording of the new title is both academic and unsound. Australia, Canada and South Africa are not "British Dominions beyond the Seas"; they are not even in the proper sense colonies, but integral members of an organic empire though without certain powers such membership technically connotes. It was a pity to crystallise the relation of the colonies to Britain in a phrase suggestive rather of a despotic relation. The Latin phrase "in ditione" is even more unhappy in the associations of its meaning. The King to-day is Emperor of a British Empire and it would have been very simple to say so.

Unless the reproductions of the models and drawings are extremely unfair to the originals, the *Spectator* cannot look forward to any increase in the architectural beauties of the Metropolis from the Queen's Memorial. The total effect may be grandiose; it will certainly be very un-English and very Continental. Masses of stonemason's work and pompous arcades somehow seem out of place in London. The only prospect which can be hailed with unmixed satisfaction is that of an opening from the Mall into Charing Cross. That will be a real public improvement. Would it not be possible to let the rest of the Mall and the front of Buckingham Palace alone, the one in its simplicity and charm and the other in its dreary ugliness, and concentrate the efforts of the architects and sculptors on a great Victorian Arch leading into Trafalgar Square? If there were any money over, it might be spent in putting a simple memorial statue in each of the London parks. The idea of a processional road does not, we confess, sound likely to be really successful in the English capital.

M. Caillaux, the present French Chancellor of the Exchequer, is about to use France's share of the Chinese indemnity to choke the deficit of this year and the next. As the indemnity is to be paid gradually, this of itself would not suffice, and he hits, therefore, upon a most ingenious plan for cashing the whole at once. He borrows £10,600,000 in Three per Cent. Rentes, and with that meets his deficits. He then directs the "Caisse des Dépôts et Consignations" to cancel £10,600,000 of Rentes, and accept instead the indemnity, which, if paid, is of exactly the same value. That is immensely clever as a "dodge" enabling M. Caillaux to avoid an increase either of taxation or of the Debt, but it will be observed that France gives up an asset computed to be worth £10,600,000, and as no economies are proposed and no taxes, the Treasury will in 1903 be again heavily in arrear. Moreover, if China does not pay, France, instead of merely going without, will be compelled either to raise a considerable loan or to invade China in order to recover the indemnity. That looks to the *Spectator* very much like the finance of a young spendthrift, who while his bills are taken and his property will sell feels quite comfortable about his future.

A slight murmur of complaint has been heard in Lincoln's Inn against the promotion of Sir Richard Henn Collins to the Mastership of the Rolls. Not one of the great legal offices is now held by a Chancery lawyer. The Lord Chancellor, the Lord Chief Justice, the Master of the Rolls, the Attorney-General, and the Solicitor-General all belong to the Common Law side. A belief prevails among Chancery practitioners that this section of the profession has a traditional right to the Mastership of the Rolls. It is a belief which has managed to survive a good many severe shocks. During the past quarter-of-a-century there have been six Masters of the Rolls—Sir George Jessel, Lord Esher, Sir Nathaniel Lindley, Lord Alverstone, Sir Archibald Smith, and Sir Richard Henn Collins. Only two of

these judges—viz., Sir George Jessel and Sir Nathaniel Lindley—have been Chancery lawyers.

The German Naval Department has issued its list of naval officers and men, from which it transpires that at the beginning of October the German navy mustered three admirals (among them Prince Heinrich, the Emperor's brother), six vice-admirals, 16 rear-admirals, 52 captains of line-of-battle ships, 20 captains of frigates, 87 captains of corvettes, 206 captain-lieutenants, 323 lieutenants of 1st class, and 203 lieutenants of 2nd class, in all 916 active officers, to which are to be added 34 officers employed in the Naval Department in other capacities. There are 170 engineers and 183 surgeons.

CORRESPONDENCE.

THE HOUSE-TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the article on the House Tax in your issue of the 6th inst. it is stated that "The House Tax, as now imposed, is absolutely independent of the land. It is assessed solely with reference to the nature of a building." This is not quite the case in Nagasaki, where the basis of assessment is partly the area covered by the house, and partly the value of the land so covered. The tax is therefore in part an additional tax on the land on account of the use to which it is put.

I have followed with much interest your persistent advocacy and generally lucid arguments in favour of the fairness of the tax. But from the point of view of the British tax-payers you appear to entirely ignore the fact that they have been advised through the former Minister and Consul, that according to the best legal authorities at home the house is included in the term "property" in Clause 18 of the Treaty. Until they are differently advised surely the British residents are justified, or well excused, in objecting to the tax, even although the *Japan Mail* is so overwhelmingly convinced of its validity.

Yours truly,

A. L. JONES.

Nagasaki, December 12th, 1901.

THE AWOMORI FIRE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On the receipt, a week ago, of a letter from Awomori telling of the pitiable plight of a gentleman and lady friends turned out of house and home by an invasion of firemen, on a false alarm of fire, I rushed into print, perhaps prematurely, seeking redress, it becomes me now, as speedily, to report that an honorable amend seems to have been made. This is the more satisfactory as it may guard against a like mistake in future.

Very sincerely yours,

HONEST INQUIRER.

Yokohama, Dec. 16, 1901.

[CONT.]

I have been so busy since getting back that I have not thought of writing to you, but to-day your letter and enclosed papers came to hand, and also the paper which reached us to-day has your communication, so I had better write to say that the next day a special officer came with the policeman who was on duty at the time, but who had no voice on account of a cold and so could not produce any effect on the mob. They made an investigation, and an estimate of the injury done to property, and so I suppose the money will be returned in some way, or they will pay the workmen for effecting the repairs. Our carpenter was on the spot at the time and they asked him for his estimate of what he would have to do, which I think was fifty yen. Then there was hardly a whole karakami in the house, some of them being smashed into match-wood.

The head of police (*keishi*) called later and expressed his regret for what had happened, and said that he had had up the head of the fire department and his under officer (*nyakuni* and *kogashira*) and had charged them to hunt up the offenders and to see that nothing of the kind happened in future. This was important because it would have been trying for such a thing to have happened while ladies were alone; providentially I was there on evangelistic work.

Although most of the Japanese thought that the house was afire, still there were some who were bent on mischief, for numbers were heard calling, "Yaso da kara, yare, yare!" and when I would not give them permission to break up the ceilings to get at a fire which was not there, they tried to hustle me out of the way, so as to do what they pleased. The head of the firemen was away somewhere, and the *kogashira* when he came towards the end, saw that there was no fire, and so sent them about their

business, but he had to acknowledge that he had seen them do some unnecessary smashing.

When I saw them kick the stove to pieces, while the fire was still in it, and then smash the ceiling to pieces over a burning lamp, and finally catch up the lamp and flourish it around, declining to put it out because they wanted to see, I felt that they were bent on setting the house afire. In this, however, I was probably mistaken, as they could have easily set fire—as if by accident.

When I left, the dining room was habitable,—the kitchen, the room I occupied, and the room of Miss Wada had not been molested—and the two up-stair rooms would be finished in a day or two, except the "karakami." The ladies were still sleeping in the two rooms off the church, even Miss Griffiths, of Hiroaki, had come to stay with them over Sunday, not knowing what had happened.

The parsonage is entirely finished. But through a mistake or forgetfulness the carpenter did not put up a new fence to the front of the lot. I told him to give me an estimate for this, but when this row turned up he was so busy with repairs that he did not do anything, and has not sent it to me yet. The old fence is repaired, and may do very well till spring. When the new one is put up the gate will be opposite the church door, instead of opposite the straight road leading past the side of the house. This will look better for the church, and will make but little difference to any one living in the house.

With kind regards, and "Merry Christmas" to all of you.

Sincerely, E. ROTHESAY MILLER.

A SUGGESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Profanity does not now exist in the Japanese language, except so far as it has been planted there by the influence of Christians in taking the name of God in vain, as they do in reading and speaking of 主 * 父. Let us use 主 to cover it in print vide, Exodus XXIII, 13; Joshua XXIII, 7.

Yours ever, 智神和

KOBE AND THE CROWN PRINCE.

The illuminated address and casket which the foreigners of Kobe agreed to present to His Imperial Highness the Crown Prince, were handed on Wednesday to Governor Hattori for transmission to the Prince. The delay has been caused by the fact that the casket has been made in London from designs sent home. A deputation of foreigners waited upon Governor Hattori at the Kencho, and delivered the illuminated Address and the Casket into his hands to be conveyed to His Imperial Highness. The deputation was headed by Mr. A. H. Groom, and comprised also Messrs. F. J. Abbott, J. A. Allion, F. J. Bardens, R. Home Cook, A. De Ath, C. L. de la Camp, J. Favre (Osaka), E. H. Gill, F. Gutierrez, T. W. Hellyer, H. Lucas, F. H. Olmsted, H. Pitteri, H. E. Reynell and R. Young.

Governor Hattori was accompanied by Mr. Tokonami, Secretary of the Ken.

Addressing His Excellency, Mr. Groom said:—

Your Excellency, as representatives of the Committee appointed by foreign residents of Kobe and Osaka, of all nationalities, to present a congratulatory address to His Imperial Highness the Crown Prince on the occasion of his marriage, we have now the honour and pleasure to deliver into your charge the duly signed and illuminated Address in question, together with a Casket, and we beg your Excellency will have the Casket and Address forwarded to His Imperial Highness the Crown Prince, with the assurance of our profound respect and best wishes.

Having explained the reason of the delay in the presentation of the casket Mr. Groom read the Address, as follows:—

"May it please Your Imperial Highness!

"The auspicious occasion of Your Imperial Highness's approaching marriage inspires in the minds of the Japanese people feelings of respectful interest and joyful anticipation, in which resident foreigners are privileged to participate. They appreciate with sympathetic insight the public importance of this event, and their desire to associate themselves with manifestations of national rejoicing which, amongst a people so devotedly loyal to the Imperial Dynasty, are naturally evoked by the nuptial celebrations of the Heir Apparent to the Throne.

"Influenced, therefore, by these sentiments, we, foreigners of all nationalities residing in Kobe and Osaka, join in respectfully tendering to Your Imperial Highness and your affianced Bride the expression of our sincere congratulations and best wishes for your united happiness and welfare; and we beg that you will deign to accept this Address and Casket as a token of our respect and of the earnestness of our desire to identify ourselves with the great public and social interests of the land wherein we sojourn."

Governor Hattori, who spoke in English, said he desired to express his deep appreciation of the present which foreigners had made in congratulation of the wedding of His Imperial Highness, who, he was sure, would value the Address and the Casket in which it was placed as evidence of the friendly relations which existed between resident foreigners and the people of this country. He thanked the deputation most sincerely for the trouble they had taken, and said the Casket would be sent to Tokyo that day in special charge of Mr. Hori for presentation immediately to his Imperial Highness.

Mr. Groom thanked the Governor for the assistance he had rendered to the Committee, and asked him also to thank Mr. Omori, his predecessor, for the advice the latter had given in the matter of the design. This terminated the proceedings.

CANADIAN MAIL NEWS.

Queen Wilhelmina was able to leave her sick room on Nov. 30th and participate in the family dinner. Prince Henry, her husband was to return to Het Loo at 6 o'clock the same evening.

The steamer *Gauss*, bearing the German Antarctic expedition, headed by Prof. Ehrlich von Drygalski, of Berlin, which sailed from Kiel on August 11th, and concerning the safety of which considerable anxiety has been felt, arrived at Capetown on Nov. 23rd.

Telegrams from Glasgow on Nov. 27th intimated that there may be an earlier challenge for the *America's* Cup than Sir Thomas Lipton's. The Dennys, builders of *Shamrock II.*, are again reported to be preparing for the construction of a yacht of their own design. If certain results are attained they hope to secure the co-operation of some club in issuing a challenge.

The long-delayed correspondence of Prince Bismarck has been published. The work is in two volumes. The first is made up of the letters between the Emperor William I. and Bismarck, many of which are extremely interesting, while the second volume is composed of miscellaneous letters exchanged between Bismarck and various notable personages.

The *Temps* on the other hand, is so devoted to the Boer cause that, in attacking Great Britain it minimizes, while not excusing the German proceedings in the invasion of 1870. It adds that when Mr. Chamberlain compares the conduct of the British troops in the South African War with the acts of the soldiers of any other nation, he insults the whole people.

Amid scenes of violent disorder, the Socialists on Nov. 28th forced an adjournment of the Belgian Chamber of Deputies, owing to the refusal of the Government to consider a universal suffrage resolution. The Socialists also announced that they will continue their obstruction indefinitely, and prevent a vote on the Budget until their demands are granted.

The Duke of Teck was thrown from his horse on Nov. 29th while out hunting near Nantwich, Chester, sustaining a concussion of the brain and an injury to his hip. The Duke of Teck, who succeeded to the title on the death of his father, on January 22nd, 1900, is a brother of the Princess of Wales. The Duke's horse struck a barbed wire fence, and pitched the Duke violently on to his head. The attending physicians reported that the Duke's injuries were not alarming and hoped for his recovery in a few days.

A Seattle telegram of Nov. 20th stated that Seattle women, wives and daughters of wealthy business and professional men, according to United States secret service detectives, have been conducting systematic smuggling operations on a large scale. Their violations of the law have become so frequent that the matter is receiving serious consideration from Government officials. A large quantity of expensive silks and dress goods were smuggled into Seattle from Victoria during the past winter.

Thomas Peterson Goudie, the bookkeeper of the Bank of Liverpool, who disappeared at the time of the discovery that the bank had been robbed of about £170,000 was captured on the morning of Dec. 2nd at Bootle, near Liverpool, where he had been in hiding. Goudie had £300 in his pocket when arrested. He will be brought to London for trial with the other men taken into custody in connection with the robbery, two of whom, "Dick" Burge, the pugilist, and F. T. Kelly, the bookmaker of Bradford, were remanded the same morning after a partial hearing of the evidence against them.

Seemingly fearing that the alliance between the pro-Bullerites and the pro-Boers, during the demonstration to be held on Nov. 30th in Hyde Park, in

sympathy with General Buller might be the beginning of a series of anti-Government agitations, the *Standard* of the 29th semi-officially warned General Buller that unless he checked the extravagance of his partisans, the Government might be compelled to make further disclosures, which would cause a revulsion of feeling against the General. The *Standard* hinted that General White at first refused to regard General Buller's heliogram as authority, and when it was deliberately repeated General White decided to disobey it.

The Devonian dinner, at which Gen. Buller presided, at the Hotel Cecil London on Nov. 30th was the scene of great enthusiasm and a remarkable tribute to his personal popularity. It passed off without any actual anti-government demonstrations. Long before the hour fixed for the reception the great court-yard of the hotel was crowded with people. The arrival of the General and Lady Buller was the signal for enthusiastic cheering. The most dramatic scene was in the banquet hall, where Gen. Buller, as the presiding officer, necessarily proposed the health of the King. A remarkable demonstration ensued. For several minutes there were deafening cheers, waving of handkerchiefs and singing. It is doubtful if London has ever seen a more hearty response to the toast to the King.

Debate opened on the German tariff bill in the Reichstag on Dec. 2. "This bill is the most important which has been before the house for a long time, but it does not imply any deviation from the policy to treaties of commerce," said the Imperial Chancellor, Count von Bulow. "On the contrary, the federal Government are firmly resolved to pursue a policy, with commercial treaties in future, in the interests of German industry, while of course upholding the just rights of Germany. The Emperor has approved the bill which is the result of several years' comprehensive, careful labours. The measure also is intended to furnish a better weapon for future commercial treaty negotiations with other states." Dr. von Thielmann, Secretary of the Imperial Treasury, said that in spite of higher duties on cereals, the Government hoped to come to an understanding with the United States.

When Dr. Krausse, the former governor of Johannesburg, who was arrested on September 2 on the charge of high treason and inciting to murder, was brought up at Bow-street on Nov. 20th for the thirteenth time, the Treasury representatives created some excitement by announcing that they withdrew the application for the prisoner's extradition to South Africa and wanted Dr. Krausse committed to the Old Bailey on the charges of high treason and incitement to murder. The Treasury officials consider there is ample justification to try Dr. Krausse here on the charge of inciting Dr. Cornelius Broecksmas, the former public prosecutor of Johannesburg, who was executed on September 30, to murder Douglas Foster, an English lawyer attached to Lord Roberts' staff, who was very active against the Boers. Krausse was remanded for a fortnight in £6,000 bail.

The London *Daily Graphic* discussing editorially on Nov. 30th the troubles in South Africa, ridiculed the accusations made in the press of the continent that the United States is fomenting disturbances in Colombia. The *Graphic* pointed out that what the United States has done at Colon, Germany may soon be compelled to undertake in Venezuela, with the result of disturbing the existing relations between Washington and Berlin. The paper asked whether it is impossible to arrive at some arrangement permanently and effectively to prevent these crises, such as the recent one at Colon and suggested if the United States will add to the Monroe doctrine a guarantee of foreign interests in these explosive republics and will itself undertake to perform police duties there, there is no reason why they, the European Powers, should not cease their opposition to Monroeism.

Owing to the recent anti-Prussian agitation in the province of Galicia, and at the capital, Cracow, Baron Speshart, the German consul at Lemberg, Galicia, has returned to Berlin. It is reported this step was taken under government orders on account of the hostile demonstrations against the German consul. It was at Vienna on Dec. 22nd that Germany had notified Austria of her intention to withdraw the German consulate at Lemberg altogether. The Emperor Francis Joseph summoned the leaders of the Polish party in the Reichsrath and appealed to them to exercise their influence to lessen this anti-Prussian feeling. According to a despatch to the Associated Press from London, dated November 23, the wholesale flogging of Polish children by school-masters for refusing to learn the catechism and the prayers in German nearly produced a riot. The parents and relatives of the children violently denounced the authorities. Many persons were arrested on charges of insulting government officials and sentenced to imprisonment.

EARLY SUBMARINES.

It is often said, remarks a writer in the *Globe*, that the first attempts at solving the problem of submarine navigation are hardly more than a century old; but this is incorrect, inasmuch as the idea of penetrating the depths of the sea suggested itself to at least one of the ancients, and was a more or less engrossing pursuit with several seventeenth century inventors. The ancient exponent of submarine warfare was Alexander the Great, who made use of divers' bells at the siege of Tyre, B.C. 332. Submarine navigation, however, appears as an object of discussion only with the sixteenth century. Bacon mentions it in describing the experiments carried out at Toledo in 1538 before Charles V. The vessels were something like divers' bells, and several men could remain under water a long time in them. Quite as vague are the descriptions of William Bourne and Magnus Vegelinus about the year 1600, in reference to other apparatus designed for submarine use. But the Father of submarine navigation may be said to be Cornelius Drebbel, a Dutch philosopher and scientific inventor, who settled in England in 1600. In London, in or about the year 1620, Drebbel built an impermeable submarine boat, in which twelve rowers and some passengers could be carried. This vessel appears to have embodied the principle now common to all submarine boats, namely, of the water-ballast compartments, with pumps for emptying them, to restore the buoyancy of the vessel. Respiration was obtained by means of a wonderful liquid invented by Drebbel himself, and called "quintessence of air." This liquid had the properties of purifying and regenerating vitiated air. If the accounts of the matter are correct, Drebbel submerged and navigated his boat, without the use of artificial light, from Westminster to Greenwich. After this James I. was anxious to take a submarine trip, but was eventually dissuaded by his courtiers. The inventor jealously guarded the secret of his invention, and died in 1634 without having been able to perfect it.

Following Drebbel a number of inventors worked at the problem; and one, Father Mersenne, advanced some important improvements. Mersenne, in fact, was the first to advocate the fish-shape, realising that to be able to go forward and astern without turning would greatly facilitate the navigation of submarine craft. He also suggested the use of phosphorescent substances for internal illumination; while his scheme for obtaining a supply of fresh air was by the use of tubes, wrapped in leather, which should float on the surface. Leather bags, furnished with "faucets," and fixed to leathern doors, were to serve for exit to the men and the materials in the boat. But Mersenne's project for a submarine vessel was purely theoretical. In the year 1660 a French engineer built at Rotterdam a semi-submarine boat, 72 feet in length. It was crossed from stem to stern by great beams, which ended in solid spikes. The craft floated on the water level, and was propelled by a paddle-wheel, situated in the centre of the boat between two impermeable walls. The boat was intended to act as a ram, the spikes being destined to bore holes in the hull of a hostile vessel below her water-line. However, no serious trials with this curious craft are believed to have been made.

Tradition relates that somewhere about the close of the same century a Yarmouth mechanic, named Day, invented a submarine boat, in which he, at the first trial, succeeded in remaining under water for twelve hours. The second trial was not so fortunate, for neither was ever seen again. But the annals of Yarmouth appear to be silent on the subject, which omission, of course, rather discredits the story. A long break then occurs before we hear anything further of submarine craft; but when at last the silence is broken, during the American War of Independence, the result is startling in the extreme: for an American inventor, named Bushnell, then actually got under an English frigate by the agency of a submarine. Bushnell's vessel, the *Turtle*, so called because it was formed of two parts resembling turtle-shells, was submerged by means of water-compartments, and propelled by a kind of horizontal screw, both contrivances being actuated by the one and only man on board. Two reservoirs of air answered for the purposes of respiration; a little conning-tower at the top enabled the navigator to see where he was steering; the thermometer and barometer inside were rendered visible by a coating of phosphorescent composition; while if the pump that expelled the water from the compartments failed to act, a large mass of lead could be detached from the keel, and thus a return to the surface be assured. For offensive purposes, the craft was equipped with an apparatus that enabled the navigator to attach an infernal machine to the keel of a ship. In 1776 Sergeant Ezra Lee went down in the *Turtle*, with the object of torpedoing H.M.S. *Eagle*. The submarine herself answered splendidly; but owing to an iron plate in the *Eagle's* keel, the torpedo failed to catch, and floating off, exploded prematurely

inflicting no greater damage than the shattering of the cabin windows. After this we hear nothing more of the *Turtle*; but in 1801 another American inventor, named Fulton, who had joined with Bushnell in his experiments, journeyed to France, where he built for Napoleon a sister-vessel to the *Turtle*. This craft, christened the *Nautilus*, could remain for a long time under water, and was also fitted with folding masts and sails to navigate on the surface. Napoleon, however, refused to profit by it, whereupon Fulton crossed to England, and offered his invention to Pitt. The latter favoured this novel engine of destruction, but as he was unable to persuade the Admiralty to his way of thinking Fulton returned to America without having sold his patent.

In 1823 a Frenchman, named Montgéry, took up Fulton's idea, and planned a large submarine boat, to accommodate a crew of 100. This, however, never became anything more than a plan; but Montgéry's project is the one on which Jules Verne based his famous romance "Twenty Thousand Leagues under the Sea." At about the same period, also, an American syndicate was formed for the construction of a submarine vessel, with which to effect the rescue of Napoleon from St. Helena—a scheme nipped in the bud by the death of the erstwhile Emperor. In 1845, Dr. Payerne's half-submarine, half diving-bell, the *Hydrostatic*, was successfully employed in removing sunken rocks at Brest and Cherbourg. When the boat had once sunk to the bottom of the sea, air was compressed in the hold so as to counterbalance the pressure from without, and the bottom being thrown open the crew could work on the ground as though they were in a diving bell. In 1851, during the blockade of Kiel, a man named Bauer built a submarine boat, propelled by a screw rotated by hand. This boat carried torpedoes and an apparatus for fixing them, which being accomplished, the navigator exploded them from the vessel by electricity. Bauer's trial trips turned out well till at length he ventured to a depth of 30 fathoms, whereupon the pressure destroyed the boat and the inventor. It may here be noted that submarines of the "Holland" type are equipped with an automatic mechanism that checks their sinking to a greater depth than 21 fathoms.

During the blockade of Charleston in 1863 the Confederates adopted Lucknell's idea for a submarine boat by constructing the *David*—a cigar-shaped, iron vessel, sinking and rising on the water-compartment principle, and propelled by hand-power. The *David* had caused the death of two crews before she made her famous attack upon the Federal ironclad *Housatonic*. At the last moment, however, the crew became fearful, and insisted upon delivering the attack on the surface, and with the man-holes open. This timorousness proved their own undoing. The torpedo was discharged with deadly effect; the *Housatonic* split amidships, and sank like a stone; but the great wave which she caused broke over the *David* and flooded the manholes, so that six out of her crew of eight also lost their lives. This affair created a feeling of horror throughout the civilised world, and the submersible boat was execrated as a diabolical machine which ought to be forbidden by International Law. This prejudice had the effect of putting a stop to further experiments with submarine torpedo-vessels for a period of twenty years. In 1885, however, Mr. Nordenfelt built at Stockholm a submarine boat which marked the commencement of the latest stage of its development. It was made of steel, had two tillers, and attained the desired positions, not by water-ballast, but by the means of two vertical screws. In choosing a steam engine as his motor, though, the inventor made his work doubly difficult. Nordenfelt's boat was exhibited at Landskrona in the presence of officers sent by all the great Powers in September, 1885; and was successfully tried in Southampton Water in December, 1887. Lastly, in 1888, France commenced those experiments which have resulted in the recognition of submarines by her own, the United States, and British Governments, in the order named.

JAPANESE DWARF TREES.

The opening meeting of the eleventh session of the Japan Society was held in the hall at 20, Hanoversquare, W., on 13th Nov., when a paper was read by Mr. Toichi Tsumura, M.J.S., "On Japanese Dwarf Trees," illustrated by specimens of dwarf trees and by lantern-slides. The chair was taken by Mr. Arthur Drosy, F.R.G.S., Chairman of Council, J.S.

The lecturer said:—It is always a pleasure for Japanese people to find that what they think graceful and beautiful is also loved and admired by other nations. And I have particular pleasure in telling you that the dwarf-trees, which our artists try to make beautiful, are greatly admired by Her Majesty, Queen Alexandra, by whose gracious permission I am enabled to show you pictures of those specimens, which are treasured and cultivated in the Royal Household. Now, the fancies of artistic horticultural-

ists have created almost improbable dwarfish trees, which Europeans looked at in amazement. They did not understand that every shape was an attempt to express some thought or feeling of the soul. So landscape gardening (the kindred industry called *Bonsai*) is seen in its utmost glory when the artists are philosophical, when the spectators regard their work with serious reverence, and when art ceases to be, as it so often is, a mere idle recreation. It is said that these dwarf-trees are "decidedly curious," "half crippled," "distorted," or "cruelly tortured," &c.; those who thus criticise our trees in bitter language, walk in to their gardens, pick the first flowers that come to hand and arrange them anyhow in a manner, which (to excuse themselves) they call "studied negligence." This is ignoble. It is evident that every one of the Laliput specimens of horticulture can hardly be called artistic. Imitation is often practised by way of flattery. Many of the eclectics are studied and copied, and not always with success. Again, it is alleged that a great deal of timber could have been obtained in all these years from such a multitude of potted, shrivelled up trees which now decorate rooms and make cabins more elegant. Such an argument proves that the rigid principles, which are wrongly termed utilitarian, are truly ridiculous, since they would abolish the cultivation of the æsthetic sentiment, that forms such an important element in realising and promoting the utopian ideal of mankind.

If we acquaint ourselves with the moods and habits of a people, we are sure to meet with fewer difficulties in appreciating what a people produces. How the little trees are looked upon in Japan is, therefore, a matter of considerable interest. You sometimes read in English newspapers such headings as "Motor cars as a social force" or "Telephones as a social force." The writers evidently believe in the greatest happiness of the greatest number. But have they ever speculated upon teapots as a social force in the humble dwelling of a miner or bricklayer? In Japan a jirikisha man will bring home a pine-tree about six inches tall, with uplified, exposed roots intertwined and twisted in a most irregular fashion; he buys it with part of a day's hard-earned wages. He might, indeed, have bought something that would yield more substantial comfort—but he preferred this—a pride to him—and to place it under a poor flickering light on the tiny supper table at his right hand. He looks at it, smiles at it. He forgets, for a time at least, the bitter struggle for existence and the foolish race for wealth, while his inner self pays due homage and reverence to the little tree, which is like a sympathetic friend and mesmerises him with its silent beauty. He is, indeed, a Japanese in the true sense of the word. He is surely happier in the society of his favourite friend than the British working men, when he hears that "The Father's Beer" Bill has been rejected by an overwhelming majority. The lecturer then went to invite the audience to look at some of the specimens, by means of the lantern slides reproduced from photographs. In commenting on the various pictures, the lecturer gave a good deal of interesting information concerning the planting, cultivation, and training of the dwarf-trees which it is impossible to reproduce at length here. Amongst other things he remarked:—"If we examine closely we find what deliberate care is taken in bending and twisting the younger branches. The possibility of life and health in a branch, such as will be required to work it up, or rather conform it to one's ideal, is the first principle of this kind of art. Only by trying it can you understand and appreciate the difficulties we have to face, for every branch has its own habitual growth, direction and power of growth, and finally the possibility of its future; all these factors must hence be counted upon; the result of the art is not one that can be obtained immediately but after a very long period of expectation. On the contrary, the cultivation of these dwarf-trees requires indefatigable supervision, and can only be entrusted to competent gardeners. The general principle of nurture is as depicted. But every one has his own way of giving water, manure, and sunlight, and it only shows that dwarf-trees are very hardy, indeed hardly enough to survive almost any treatment, unless it is overdone. As to the history of the dwarf-trees, some of them are said to be of great antiquity. If so, this quaint art of training trees must be a very old practice.

I would, however, fain dispense with the discussion of the ages of these dwarf-trees, by mentioning my authority that potted trees are said to have become general favourites since the time of Sakakibara Judo, who introduced the cultivation of trees in pots. It is said it was somewhere about the end of Kioho and the beginning of Genbun—namely, in the European calendar, beginning of the eighteenth century. But it seems rather dubious whether this be the true date, when we remember that the curious tea ceremony and the peculiar style of garden-making originated as early as the thirteenth century. The trees in the garden of this school were very likely trained in much the same style as we see them in pots to-day, and again we see some pictures of the potted trees drawn by Chinese artists over 2000 years ago. Here I re-

gret I can offer you no more than a conjecture that the practice of potting trees was very likely learned from China early in our history, and has undergone some changes on Japanese soil. Later on, it appears to me that the schools of flower arrangement in various ways have affected the cultivation of potted trees. But how far this is so I could not ascertain at present, principally owing to the scarcity of references at my command and the short notice given by the Japan Society to prepare this paper. To conclude, I should like to add how these miniature trees illustrate the character of our people. It is evident that they can enjoy and dwell upon abstractions, though the traces of this quality seem, especially within the last few years, to be on the wane, being displaced by the more urgent necessity of turning dynamos and setting up boilers or engines. But what they are in heart is reflected in their pastimes. Japanese recreations tend to be mental rather than physical, and enjoy, more or less, the same reputation in this respect as the recreations of the Asiatic. I remember, having spoken in the introduction to this paper of paintings, which formed a distinctly idealistic contrast to those of the realistic school, and in the cultivation of our miniature trees, it seems to me that these two schools of painting came together into play. Need it be mentioned here that the influence of the idealistic paintings had a great bearing upon the gardeners in forming the shapes of their trees? Now the gardeners in Japan are keenly sensitive to the beauties of the trees in Nature, but at the same time they exert all their conceit in copying them to try and excel Nature. Yet how their humour and ingenuity succeed in the result. The *Bonkei*—miniature landscape—is the highest development in this industry of the cultivation of dwarf-trees. The idealistic painting is indisputably the foundation of the *Bonkei*. Their peaceful recreation and gentle refinement may, as is often anticipated, vanish away before the tyranny of economical competition. This point I cannot here discuss. But they have happily established in the pages of art history their claim to be artistic; they may not have been either thinkers or travellers, or inventors, but they were artists who cultivated such trees. And, though we must understand them, before we can admire and sympathise, I have every confidence that the world will admire them more, in proportion as it understand them better.

GERMANY AND CHAMBERLAIN'S SPEECH.

A New York telegram of Nov. 21st said: With the appearance of the comments of the *North German Gazette* on the anti-Chamberlain feeling in Germany on account of the Colonial Secretary's reflections in his Edinburgh speech on the conduct of the German troops on certain occasions, the London press seems to have reached the conclusion unanimously that the matter is more important than they hitherto believed.

The *Post's* Berlin correspondent says: "The actual facts are that the demonstrations have been practically spontaneous and reflect the genuine color of the feeling of aversion and hatred with which the overwhelming majority of the German nation regard the war and the British people."

Mr. Chamberlain, through his secretary, has replied to interrogatories by some correspondents here of the continental newspapers in England in regard to the expressions he used in his speech, for which he is being criticised. The Colonial Secretary says that when, in order to justify severer measures which were to be adopted in the Boer war, he made reference to the action of other nations, he had not meant that severity was authenticated by official histories, and went beyond what was just and necessary. What he did mean, is that what is just and proper for other nations cannot be barbarous and inhuman on the part of Great Britain.

The fact, said another correspondent, that the anti-Chamberlain agitation in Germany has at last extracted a semi-official expression of approval from the *North German Gazette* has had the effect of convincing the British press that the situation is becoming serious. Heretofore there had been a disposition to disregard and belittle the influence of the agitation. Now the papers are taking the trouble to explain that Chamberlain's words were not intended to insult or offend Germany.

"The temper of the German public is dangerous," says the *Morning Post*, "and it behooves our people to be on their guard. The Germans appear to regard Great Britain as covetous, rapacious and barbarous. From that belief to the corollary that a barbarous nation ought to be suppressed is a short and easy step."

The *Daily News* remarks:—"Mr. Chamberlain, as the French say, 'costs dear.' The new imperialism which was to strengthen our position in the world has left us without a friend. America cannot supply what we have lost in Europe, for the German Dutch and Irish elements in that great community are to-

day more hostile than they were during the Venezuelan trouble."

The *Daily Chronicle*, which admits that the "agitation is the outcome of misrepresentation of Mr. Chamberlain's ill-judged and ill-timed remarks," says:—"This does not diminish the gravity of the situation. It is a serious thought that Lord Salisbury's self-congratulation at the Guild Hall at the correct attitude of the great Powers is beginning to be falsified."

Referring then to the "scurrilous attacks made by the German press," the *Daily Chronicle* concludes as follows: "Unless the authorities restrain the unlicensed abuse of England in the German press, we fail to see how this country can much longer ignore these accumulated insults."

The *Standard* and the *Daily Telegraph* are much less alarmist in tone, but they recognize that "such agitations, even when artificial, are not always harmless and it is a good thing that the relations between the two governments are so friendly, and that Queen Victoria's blood runs in the Kaiser's veins."

All the papers publish long specials from Berlin describing the public feeling, and agreeing that the article in the *North German Gazette* is a proof that the German Government is altogether powerless to stem the agitation, which is intended, if possible, to force Count von Bülow into some anti-British pronouncement.

The *Times*, defending Chamberlain against German attacks, says: "We must beg to remind the Germans that we claim an equal right to guard our own honor and to resent accusations founded upon the most hateful and poisonous calumnies disseminated with a deliberate persistence inexplicable in a friendly community. We hope the German people and Government will understand that the British nation will not acquiesce in any impeachment of the honour of our gallant soldiers, which is as dear to us as is that of the German army to the German nation."

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE NICARAGUA CANAL.

Shanghai, Dec. 3.

A telegram of December 12th says that Senator Lodge, speaking in the Senate at Washington, declared that the result of the new Canal Treaty was that Great Britain transferred to America the entire management of the Canal, both in peace and in war, with the right of fortification.

KITCHENER TO TAKE THE FIELD.

A telegram from Pretoria says that as General Ian Hamilton has arrived, Kitchener will personally take the field and direct the movements of the troops.

MARQUIS ITO.

A telegram of the 13th says that Marquis Ito has dined with Count von Bülow.

SIGNS OF SURRENDER.

Meetings of the Boers in the field are frequent lately, and are significant of an increasing inclination on the part of individual Boers to surrender.

THE CASE OF DR. KRAUSSE.

London, December 13.

Doctor Krausse has been committed to take his trial at the January sessions on a charge of inciting to murder Mr. Forster, a barrister.

LOYAL CANADIANS.

ENTHUSIASTIC SCENES.

The Canadians are mobilizing at Halifax and will embark on the 10th of January for South Africa. The departure of the quotas from the different towns is marked by scenes of enthusiasm equalling the departure of the first contingents.

SOUTH AFRICA.

London, Dec. 14.

Botha's force has again split up. General Hamilton's columns which captured Bethel's commando, covered 51 miles in 24 hours, including seven miles of a dashing pursuit.

MINING RECOMMENCING.

Lord Kitchener has authorized the starting of 100 stamps on the Rand weekly. The stock exchange at Johannesburg reopens in a few days.

FURTHER CAPTURES IN SOUTH AFRICA.

London, Dec. 15.

General Bruce Hamilton reports from Ermelo that on the 13th he surprised Piet Viljoen's laager and killed 16 Boers, and captured 76 armed prisoners, besides many wounded. He also recaptured one of Colonel Benson's guns.

THE GERMAN TARIFF.

Great Britain has drawn Germany's attention to the grave apprehensions entertained in England with regard to the injury likely to be caused to the trade of both countries by the proposed new German tariff.

The Russian and Austrian press also continue to express apprehension with regard to the probable effect of the new German tariff.

MARQUIS ITO DECORATED BY THE KAISER.

Kaiser Wilhelm has conferred upon Marquis Ito the Grand Cross of the Red Eagle with brilliants.

SOUTH AFRICA.

Colenbrander and Dawkins have captured Commandant Badenhorst and fourteen others. The effect of this important capture is expected to be good. The blockhouse system has already resulted in securing a clear country for a hundred miles radius round Johannesburg.

WIRELESS TELEGRAPHY.

PENZANCE TO NEWFOUNDLAND.

London, Dec. 16.

Marconi is now at St. Johns, Newfoundland, and he declares that he there received, through wires raised 400 feet by means of kites, faint wireless signals from a powerfully equipped station at Penzance.

SOUTH AFRICA.

It is reported that Louis Botha has been severely shot below the left knee, and that he only escaped by crawling into the bush.

THE ISTHMIAN CANAL.

London, Dec. 17.

The U.S. Senate has ratified the Canal treaty.

THE QUESTION OF MANCHURIA.

Great Britain, the United States of North America, and Japan are energetically pressing China to procure the submission to them of any Manchurian agreement before signature.

Japan has notified China that she will require an equivalent for all advantages given to Russia in Manchuria.

LORD ROSEBERY ON THE WAR.

Shanghai, Dec. 18.

A telegram of Dec. 17th said Lord Rosebery, speaking at Chesterfield, declared that the honour of the British empire, as well as the future of South Africa, require that the war should be brought as vigorously and as successfully as possible, to the promptest and completest conclusion. The Liberal Party are now entirely free from an alliance with the Irish, who openly ranged themselves with their country's enemies. The independence of the Boers is out of the question, and the relentless prosecution of the war is necessary, but though it is impossible to negotiate with the Boer generals, overtures for peace from the exiled Boer Government should not be rejected. He advocated a liberal amnesty, and in conclusion placed his services at the

disposal of the country, with the watch-words "national efficiency."

KRITZINGER CAPTURED.

Later.
A telegram of Dec. 18th says that Kritzing was captured, having been severely wounded in attempting to cross near Block-house 9.

During the week 458 Boers were disposed of.

PROBABLE EARLY CLOSE OF THE WAR.

London, Dec. 18.
The *Daily News* correspondent at Heidelberg telegraphs that a feeling prevails that the war will be over in two months.

It is rumoured that Delarey wishes to surrender.

BOER PRISONERS FIX A DATE.

The Boer prisoners say that the war will cease on the 22nd December.

RUSSIAN GROWN TEA.

The British Consul at Batoum reports unfavourably upon the prospects of the tea cultivation in the Trans-Caucasus.

SOUTH AFRICA.

London, Dec. 19.
Kritzing and two adjutants and three others were also wounded (in the recent attempt to pass the block houses).

(RECEIVED AT THE LEGATION OF FRANCE.)

NEWS FROM FRANCE.

Saigon, Dec. 13.
The Chamber is discussing the religious budget which was suppressed by the Commission. M. Waldeck Rousseau demands its re-establishment.

SOUTH AMERICAN POLITICS.

Saigon, Dec. 15.
There is a grave situation between Chili and the Argentine Republic. The United States has tendered its good offices. The Argentine Republic has called out sixty thousand men of its reserves. Nevertheless it is not believed that war will break out.

FRANCE.

The French Minister of Public Instruction, speaking in the Chamber, severely censured the anti-military doctrines of a certain professor. The Chamber, by 412 to 69, voted for the *affichage* of the speech.

FRANCE AND ITALY.

Saigon, Dec. 16.
The Italian Minister of Foreign Affairs, questioned in the Chamber with reference to the agitation in Tripoli, said that an exchange of views between France and Italy had demonstrated the perfect accord of their respective interests in the Mediterranean.

FRENCH NEWS.

Saigon, Dec. 19.
In the Chamber, M. Waldeck-Rousseau defended the Budget of Religions and insisted on the advantages of the Concordat. The Chamber by a vote of 390 to 187 decided to pass to the discussion of the articles of the Budget of Religions.

M. Caillaux has introduced a project of two provisional twelfths.

(RECEIVED IN TOKYO.)

THE CHINESE INDEMNITY.

Great Britain has named Mr. Hillier, Manager of the Peking branch of the Hongkong and Shanghai Bank, as commissioner for receiving the Indemnity.

THE CHINESE COURT.

Their Majesties the Emperor and the Em-

press Dowager left Kaifong on the 15th instant, and will reach Peking on the 7th January. They will stop one day each en route at Chang-teh and Shun-teh, and 4 days at Paoting.

CHINESE STUDENTS IN JAPAN.

Mr. Hsü, who was formerly inspector of Chinese students in Japan, was to leave Shanghai by the *Kobe Maru* on the 14th instant for Japan, with 10 new students from Hupeh. The same steamer was to carry Mr. Lo, who, with 5 students from Hupeh and two fellow-travellers, comes to Japan for the purpose of compiling text books for use in Chinese schools.

(FROM THE "N.-C. DAILY NEWS.")

NEWS FROM THE NORTH.

Peking, Dec. 7.
H.E. Viceroy Yuan Shih-kai has been in constant communication with the Foreign Ministers since his arrival in Peking.

It is stated that the views of the Yangtze Viceroy in regard to the Manchurian Convention, as conveyed by them in a dispatch to H.E. Yuan Shih-kai, are entirely in accord with those of Prince Ching.

FATAL FRACAS AMONG THE SOLDIERY AT TIENSIN.

Tientsin, Dec. 9.
A sepoj ran amok and shot two of his comrades. The Germans shot him and a free fight ensued, resulting in four Germans and three sepojs being killed and several wounded.

NEWS FROM PEKING.

Peking, Dec. 10.
H.E. Lu Chuan-lin, reactionary member of the Grand Council, conscious of his own unpopularity, is anxious to resign, and has recommended Lu Jen-hsiang and Yi Ko to Yung Lu's patronage. The Emperor is prepared to accept Lu Chuan-lin's resignation, but the Empress Dowager is hesitating.

H.E. Wang Wen-shao arrived at Peking on the night of the 8th and called on Prince Ching early yesterday morning to discuss the Manchurian Convention. He has stated that it is his intention to consult on all matters with Prince Ching, and he will not act on his own account as his predecessor Li Hung-chang did.

H.E. Yuan Shih-k'ai has been advising Prince Ching to reject the Manchurian Convention. H.E. Yuan is continually discussing with the Foreign Ministers the discontinuance of the Tientsin Provisional Government.

MARINE ACCIDENT AT SINGAPORE.

Singapore, Dec. 7.
The steamer *Arratoon Anear* collided early to-day with the Tanjong Pagar Wharf. She penetrated thirty feet into the wharf and wrecked a godown, while apparently receiving no injuries herself.

NEWS FROM PEKING.

Peking, Dec. 6.
Prince Ching, under advice of the British and U.S. Representatives, proposed the following four suggestions to the Throne:—

1. Disinherit the Heir-Apparent Pu Chün;
2. Keep the Grand Secretary Yung Lu away from Court;
3. The decapitation of Tung Fuhsiang, and
4. The abolition of the Empress Dowager's so-called Regency.

The Empress Dowager reluctantly consented to the 1st and 3rd suggestions, but absolutely rejected the 2nd and 4th. Viceroy Yuan Shih-k'ai has been instructed to learn the opinions of the Foreign Ministers on the above and report to the Throne.

Although the date for the departure of the Court of Peking has been fixed by Imperial decree for the 14th instant, whether there is to be any further change of date will depend on Viceroy Yuan's report on the above.

Prince Ching's first conclusion regarding the Manchurian Convention was that there were certain points in the late Viceroy Li's negotiations

which required slight changes, after which the Convention could be adopted at once; but the Foreign Ministers advised him not to do so; especially the U.S. Representative, who called on Prince Ching yesterday and proposed to intervene in the matter. Prince Ching has therefore changed his first intention and the Convention is likely to be set aside.

Peking, Dec. 11.

H.E. Yuan Shih-kai has been endeavouring to arrange for the discontinuance of the Provisional Government before dealing with the Manchurian question. He has met with strong opposition from the British and German Ministers, and has had to leave for Paotingfu without having succeeded in his object.

AUDIENCES.

Kaifeng, Dec. 9.

Their Majesties granted audience this morning to Heng Shou, Manchu Brigadier-General of the Liangchou Circuit, of Kansu province, and to the Manchu Colonel, Tu Erh-su.

Kaifeng, Dec. 10.

His Imperial Highness Prince Chun, and the First Secretary of the Special Mission to Germany, Chang Yen-mou (Chang Yi) Sub-Chancellor of the Grand Secretariat, were received in special audience this morning by their Majesties. Prince Chun was granted the privilege of lunching with their Majesties after the audience.

Kaifeng, Dec. 12.

Their Majesties granted audience this morning to Prince Chun, Sheng Yün, Governor of Shensi, Major-General Fang Yu-sheng, and the Chihli expectant prefect Wang Hsuan.

DEATH OF A NOTED STRAITS CHINESE.

Singapore, Dec. 13.
Chang Keng-kwe, Captain China, Perak, is dead. His property is valued at ten millions.

(FROM "DER OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, Dec. 5.

The German Reichstag received to-day the Budget of Kiaochow for 1902-03. It shows expenses amounting to 12,528,000 marks, rendering necessary an allowance of 12,168,000 marks from the treasury of the German Empire, the revenue of the Colony itself being calculated only at 360,000 marks. During the present year the expenses were calculated at 11,050,000 marks, whereof 300,000 marks, was the income of the Colony and 10,750,000 the contribution of the Empire.

Among the extraordinary expenses are mentioned:—

	1902. Marks.	1901. Marks.	Increase. Marks.
The ordinary expenses reach the sums of against.			
Civil administration	799,547	723,062	76,485
Military administration	2,458,593	2,119,599	338,994
General expenses	1,688,040	1,403,615	284,425
	1092. Marks.	1901. Marks.	
Building of harbour	3,400,000	3,385,000	15,000
Construction of buildings	2,105,000	1,590,000	515,000
Floating dock ...	400,000	300,000	100,000
Electric plant ...	350,000		

The following addition to the military forces is required commencing from the first of October 1902: one chief of the Staff, one company of horse, and one detachment of Marine-Artillery, altogether one captain, three officers, and 165 men.

Berlin, Dec. 7.

The German Budget for 1902 provides for Consulates at Nanking, Ichang, and Chinanfu. Marquis Ito has made arrangements at St. Petersburg for the establishment of a steamer line between Tsuruga and Vladivostock.

It is reported that a treaty has been signed whereby the Danish Islands in the West Indies have been ceded to the United States of America. The German newspapers *Vorwärts*, *National*

Zeitung, and *Kölnische Zeitung* have been prohibited in South Africa.

NEWS FROM THE NORTH.

Peking, Dec. 7.

The German Minister Dr. von Mumm returned to-day from his visit to the treaty ports and Kiaochow. Immediately after his arrival the Acting Governor-General of Chihli, Yuan Shih-kai, paid a visit to the German Minister.

Peking, Dec. 9.

A man of the 4th Indian Punjab Regiment, who was supposed to have run amok, fired to-day in Tientsin at two men of his own regiment and killed them. Then he entered the store rooms of the German Brigade and fired more shots. He thereby fatally wounded Controller Ehlert, seriously two German soldiers, and slightly one, before the German sentinel could kill the Indian.

NEWS FROM THE SOUTH.

Hongkong, Dec. 9.

The Hongkong Regiment arrived here this morning from North-China.

LATEST COMMERCIAL.

IMPORTS.

Manchester advices show an advance of a half-penny per pound for Yarns but dealers hold off expecting the rise to be purely temporary. There has been very little done in Shirtings, Fancy Cottons and Woollens.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirting—8½ lb, 38½ yds, 39 inches	2.85 to 3.50

	PER BALE.
Hoop Iron (¾ to 1½ inch)	5.50 to 6.00

KEROSENE.

A better feeling can be reported in this market.

American	2.66
Russian	2.40
Langkat	2.35

SUGAR.

There have been small deliveries of Refined, but prices are unchanged.

	PER PICUL.
Brown Takao	Y. 5.90 to 6.55
Brown Manila	6.35 to 7.30
Brown Daitong	5.80 to 6.00
Brown Canton	6.00 to 7.70
White Java and Penang	7.90 to 9.40
White Refined	9.95 to 11.70

EXPORTS.

RAW SILK.

The market has been quiet during the week and settlements have been small. Prices for crack chops are unaltered, while medium grades are lower in price and easy in tone. Taking it all round sellers are inclined to be current and we shall probably see lower prices before the close of the year.

BEAUTIFUL SKIN

Soft White Hands

Luxuriant Hair

Produced by

CUTICURA SOAP.

MILLIONS OF WOMEN USE CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many antiseptic purposes which readily suggest themselves to women and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients, and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines, in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour.

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the severest humours, with loss of hair, when all else fails. Sold throughout the world. "All about the Skin, Scalp, and Hair," post free, of Aust. Depot, R. TOWNS & CO., Sydney, N. S. W. So. African Depot: LENNON LTD., Cape Town. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 28TH, 1901.

BIRTH.

At Yokohama, on the 21st December, 1901, the wife of MARTIN SCHEILLENBERG, of a Son.

SUMMARY OF NEWS.

THE Crown Prince has made a donation of yen 500 to the Railway Bureau.

DR. AND MRS. HATUYAMA are expected to arrive at Nagasaki about the 7th of next month.

THERE was a heavy snow-fall at Takata on the 23rd. The drifts were over two feet deep.

A BRANCH of the Russo-Chinese Bank will, it is reported, be opened at Nagasaki some time next year.

THE steamer *Sutherland*, which went ashore in a gale on the Tapatau Rock at Kiaochow, is expected to become a total wreck.

A COLLISION occurred between a passenger and some goods cars on the Sanyo Railway at Nishinomiya on the evening of the 22nd inst. One man was killed.

A TELEGRAM published in Osaka dated London,

Dec. 21st, says:—The American cruiser *Philadelphia*, now in San Francisco, proceeds to Panama under urgent orders.

THE materials for a fine floating dock, ordered from Europe for the Sasebo Admiralty, will arrive at Nagasaki by a Nippon Yusen Kaisha's steamer about the 7th of January next.

PROF. JOHN H. WIGMORE, formerly an instructor in the Keiogijiku, Tokyo, has been promoted to the position of Dean of the Northwestern University Law School, Chicago.

ON the night of Dec. 18th, the residence of Mr. Sufu, Governor of Kanagawa Prefecture, was broken into by a burglar who carried off some valuable articles. The thief is still at large.

A PRIVATE telegram received in Shanghai on Dec. 19th, said that the *Peiho* was being closed by ice, and the steamers were leaving Taku, many of them with their inward cargoes undischarged.

THE Hongkong Police Force will be represented at the coronation ceremonies next summer by sixteen of its European members, who are all going home on leave in the spring of the coming year.

ON Saturday afternoon, a series of entertainments was given at the Noge reservoir to commissioners, officials and workmen who took charge of the extension of the Yokohama Water Works.

AN 11-knot steamer of 900 tons gross, the *Hingchai*, built at Kwong Tuck Cheong's ship-building yard for the Wayun Steamship Co., Ltd., and engined by the Tin Hing Co., was launched at Hongkong on the 12th.

IT was reported in Shanghai on Dec. 15th that the spinning mill which formed part of the property formerly owned by the Yah Loong Cotton Spinning Co., Ltd., had been sold to Japanese purchasers for the sum of Tls. 75,000.

A SOUL telegram dated Dec. 21st says that Mr. Hayashi, Japanese Minister to Korea, had farewell audience with the Korean Emperor on that day, and that the Minister will leave Chemulpo on Dec. 25th by the Japanese war-ship *Saiyen* for home.

MR. K. ISHIKAWA, Principal of the Tokyo School for Dumb and Blind, was decorated by the Emperor on Dec. 21st with the Sixth Class Order of Merit in recognition of valuable services rendered by him to the institution, over which he still presides.

WE are asked by Mrs. Van Petten to state that the bazaar held on the 13th and 14th in aid of the Charity Hospital at Negishi, netted 212 yen profits. The ladies in charge desire to express their sincere thanks to all who contributed to its success.

THE British steamer *Yiksang*, which arrived at Yokohama on Dec. 18th from Hongkong, and for which Messrs. Jardine, Matheson and Co. are the agents, has been purchased by the Mitsui Bussan Kaisha. The vessel has a tonnage of 1,317 tons.

A FEW days ago, says a native paper, the Yokohama branch of the Standard Oil Company lowered quotations for their oil by six sen per case. This step is attributed to the importation of Russian petroleum in large quantities and to the appearance of the new "International" brand on the market.

THE Military Engineering school had some successful balloon experiments at Wakamiya-cho Ushigome, Tokyo, on the morning of the 23rd

inst. Mr. Wada, of the Meteorological Observatory, went up in the car and when the balloons had reached 150 metres, released two pigeons and at 300 metres other three, all of which reached a military office. Prince Fushimi, General Nozu, and other officers were present.

ON the evening of Dec. 18th, a Japanese woman named Fujiki Osa, aged 32 years, living at No. 1,119, Negishi, Yokohama, attempted to set fire to an adjoining house but was prevented by some neighbours who took her to the Bluff Police Station. Upon examination, she was found to be in a state closely bordering on insanity and consequently the police had to deliver her to her sister living in the neighbourhood.

IT is reported from Nagano under date of Dec. 19th that under the auspices of Viscount Honda and other leading inhabitants of that place a line to be called the Hochu Electric Railway has been organized and that the work of construction is expected to commence at an early date, sanction having already been obtained. The new railway runs from Toyono station on the Shin-yetsu railway to various hot springs at Shibu, Yasuhiro, Tanana, etc. in that district.

ON Monday afternoon Baron Sannomiya, Chief of the Board of Ceremonies, while proceeding in his carriage from the Household Department, met with a nasty accident at Miyakezaka, Haya-busacho. The horse shied at a telegraph pole, and striking it, broke the glass of the window. Baron Sannomiya was slightly injured on the face by a piece of the broken glass. The *betto* was severely injured. Viscount Katsura happened to be passing at the time and he conveyed the Baron to his residence at Takanawa.

THE foot race from Mita, Tokyo, to Hakone a distance of 22 *ri*, by the students of the Keio-gijiku came off successfully last Saturday, the 21st. Mr. Kobayashi Hoji, 20 years old, was the winner and received the gold medal presented by the *Jiji Shimpo*. The second man was Mr. Morimoto Risaburo, 18 years old, who obtained the silver medal offered by the same journal. There were 15 competitors in the race. Starting from Mita at 3.30 a.m. the successful runner arrived at his destination at 3.57 p.m. and the second man at 4 p.m. via Kanagawa, Totsuka and Oiso.

VISCOUNT WATANABE, former Minister of Finance, writing from Vienna under date of Nov. 3rd, said that since his arrival at the Austrian capital on Oct. 26th, from Rome, nearly every day had been passed busily and pleasantly in either accepting or giving entertainments. After describing an interview he had with the Austrian Minister of Finance, the distinguished tourist remarked that he will shortly set out on a tour of inspection in Turkey and Greece, *via* Servia, Roumania, and the Balkan peninsula, and thence proceed to Odessa, whence he will visit St. Petersburg. The Birthday of the Japanese Emperor was celebrated at the Japanese Legation in Vienna with due respect.

A COLLISION took place in the Inland Sea on the evening of Dec. 16th between the German steamer *Serbia* and a Japanese fishing boat, with the result that the latter was sunk. There were two fishermen in the boat, and one of them was rescued, but the other is missing. The collision was due to the fact that there was no light in the fishing-boat at the time. Though the Japanese boat was blameworthy in this case the Captain of the steamer is reported to have given, out of sympathy, to the rescued fisherman and the family of the other man a sum of yen 135, which was collected from among passengers and crew of his ship. The German steamer was on her way from Kobe to Hongkong when the accident occurred.

THE POLITICAL SITUATION.

Saturday, Dec. 21.

The Minister President of State has taken the exceptional step of inviting the *Seiyun-kai* leaders, Messrs Ozaki Yukio and Masuda Masahisa, to meet representatives of the Cabinet in conference so as to find an exit from the present dilemma, and the *Seiyun-kai* leaders have readily assented. The initiative came from Viscount Katsura, who has thus shown wise statesmanship, for the question at issue is merely one of form, and it would be at once unsightly and injurious to the nation's reputation that a crisis should be precipitated about such a question. Viscount Katsura originally proposed that the Cabinet should be represented by Admiral Yamamoto and Mr. Sone, but the reply of the *Seiyun-kai* leaders was that they earnestly desired the presence of the Minister President himself, in view of the importance of the occasion, and that while regarding Admiral Yamamoto as eminently suitable, they neither approved nor condemned the project of appointing Mr. Sone. This last hint seems to have been taken, for the members of the Cabinet who ultimately attended the conference were the Premier himself and Admiral Yamamoto. The first meeting took place on the 18th instant and the second on the 19th. No definite decision is understood to have been reached, but there is a general feeling that a healthier atmosphere has been created. No one attempts to say definitely what concessions the Government is prepared to make, and, indeed, it is easy to appreciate the difficulty of making a forecast, for everything turns upon one point—shall the Chinese Indemnity be drafted into the general budget or shall it be placed in a separate account. Judging from the tone taken by the Minister of State for Finance in the Lower House on the 19th instant, the Cabinet is quite determined not to change its attitude in the matter. On the other hand, the leaders of the *Seiyun-kai* are not in a position to challenge a conclusive trial of strength. They are without their head—whose astuteness in being absent from the scene must now be recognised—and if they defy the Cabinet to the extent of having the duties of administration placed upon their own shoulders, they certainly could not discharge those duties in the face of a hostile House of Peers. If indeed the embarrassment be purely an affair of sentiment, then a common basis of agreement may be very difficult to find. But there are many men of sound sense and business instincts working behind the scenes, under the guidance of Count Inouye, and it is not unreasonable to hope that their united efforts will discover an exit satisfactory to both sides. Marquis Ito is reported to have telegraphed that as certain foreign States have already taken the step of drafting their share of the Chinese Indemnity into their budgets, there can be no valid objection to Japan's doing the same.

For our own part, we are disposed to regard the issue with confidence. It is certain that the Prime Minister would never have taken the course of inviting the *Seiyun-kai* leaders to a conference had he not previously been assured of their readiness to accept the invitation. Further, when a meeting of the *Seiyun-kai* parliamentary members has been called for the purpose of consulting them about the new development, they unanimously agreed to leave the matter in the hands of Messrs. Ozaki and Masuda, and to appoint a small committee through whom information as to the course of the conference could be conveyed from time to time. It may be described as an almost uniform experience

in Japan that conferences of this kind, where both parties approach each other in a conciliatory spirit, end in an understanding, and that is the result we venture to predict in the present case, though we do not offer any confident analysis of the bases of settlement. The probability is that the Cabinet will give way as to the drafting of the Indemnity into the general budget and will agree that the Naval Capital Fund should be restored out of the surplus revenue of the next two years, while the *Seiyun-kai*'s concessions will be in the matter of railways and with regard to the method of redeeming the national loan bonds.

Monday, Dec. 23.

A meeting of the representatives of the Cabinet and of the *Seiyun-kai* was to have taken place in the Imperial Hotel on the 20th instant, but it was postponed by desire of the Ministry. In political circles it does not seem to be inferred that any hitch has taken place, but only that the Cabinet finds it necessary not to enter the conference without a distinct determination as to what portions of its financial programme it is prepared to abandon and what portions it considers essential. Those points are said to have been already fixed by the *Seiyun-kai* on their side, but an agreement on the part of the Cabinet Ministers is not so easy. There is a "strong party" among the Ministers, and the majority of the Peers also advocate a policy of non-concession. It is to be observed that the Minister of State for Finance declared emphatically in the Diet last Thursday that the Government was determined not to agree to place the Chinese Indemnity in a special account, and inasmuch as that question is the cardinal demand of the *Seiyun-kai*, a situation appears to have been created involving either the failure of the conference or the Cabinet's repudiation of Mr. Sone's affirmation. There is an idea that the Ministry's back has been strengthened by an alleged telegram from Marquis Ito to the *Seiyun-kai* leaders, explaining that since other countries are treating the Indemnity as the Cabinet proposes to treat it, there can be no valid objection to the latter's project. At all events Saturday saw the capital in a state of bewilderment as to the issue of the complication. The newspapers found scarcely anything else to talk about.

As the situation takes more definite shape it becomes easy to foresee that should the *Seiyun-kai* force the complication to a rupture with the Cabinet, the latter will find itself in a camp with the Progressists and the House of Peers for allies. The Progressists have shown their usual astuteness in this instance. They have deliberately brought their programme into explicit agreement with that of the Ministry, although the process has involved some rather marked departures from previous assertions, and has exposed them to caustic criticism at the hands of their enemies. The occasion seems to constitute an opportunity for the Progressists to attract to their ranks some of the older statesmen, as the *Seiyun-kai* have already done, and such a chance is not to be neglected by a wise political party. It need scarcely be said that this pause in the negotiations has opened the mouths of the critics in whose eyes nothing can ever be right; the men who denounce with equal vehemence the things done and the things left undone. There is no interest in following the outcry of such persons, but we may note that all seem agreed in condemning Mr. Sone, the Minister of Finance. Mr. Sone appears to labour under the disadvantage of

having the courage of his opinions and of attaching little importance to the obstacles confronting him.

Up to the moment of going to press we have no information of a definite adjustment of the difficulty having been effected. A second meeting of representatives of the Cabinet and of the *Seiyun-kai* was to have been held on Saturday, but it did not take place, the Government not being yet prepared to formulate its concessions. The parliamentary members of the *Seiyun-kai* are certainly not united in their views, a small but influential minority being resolutely opposed to an uncompromising policy. In the Ministerial camp also there are two sections. Meanwhile the eyes of all are fixed upon Count Inouye who is endeavouring to effect a compromise. An informal meeting of the members of the conference was to have taken place at the Count's residence on Sunday, but in political circles there does not appear to be any confident hope of a settlement. It is easy to appreciate the Government's dilemma. If it goes too far in conciliating the *Seiyun-kai*, it will alienate the goodwill of the Peers. To many onlookers it seems as though the Cabinet's wisest course would be to let the machinery of the Diet work without interference until a veritable deadlock is reached. In whatever manner the Lower House alters the Budget, there is almost a certainty that the Peers will restore it to its original form, and the conference ensuing in the ordinary course of parliamentary procedure would appear to be the most suitable place for mutual concessions. Against that course, however, there is one strong objection, namely, that it would imperil the existence of the Budget altogether. Did the conference of the Houses fail to reach an understanding, that would be an end of everything. Doubtless what the Cabinet is bound to consider *in primis* is the passing of the Budget, and to achieve that object an understanding with the *Seiyun-kai* is the best course.

The *fitsugyo-ka* (business men) are also seeking to bring about a composition of difficulties. Baron Shibusawa, Mr. Okura and Mr. Shoda are said to be exerting all their influence.

Tuesday, Dec. 24.

Monday morning found things still uncertain. A large part of Sunday was devoted to discussions in Count Inouye's residence, but though they were continued up to a late hour at night, no definite decision was reached. The crucial points are the Chinese Indemnity and the repeal of the law authorizing the Treasury to effect the payment of the national debt by purchasing bonds in the open market instead of by periodical drawings of lots. The Cabinet seems resolved to oppose the latter change of system, though its pertinacity of determination is not easy to comprehend; while as to the Chinese Indemnity it is not unwilling to sell the bonds to the Deposit Bureau at a lower rate than 80, but it declines to abandon the transaction altogether as the *Seiyun-kai* leaders demand. Count Inouye is understood to be siding with the moderate view. He is too astute not to see plainly that several inconvenient consequences would result from forcing matters to a final rupture. In the first place, the Progressists would be the only gainers, since they would find themselves practically allied with the present Ministry. In the second place, there would probably be a split in the ranks of the *Seiyun-kai*, since a section of the latter is strongly opposed to

uncompromising opposition. In the third place, the *Seiyun-kai* would alienate the House of Peers and throw the latter into the arms of the Progressists. And in the fourth place the Party would be acting contrary to the wishes of its leader, who is understood to have telegraphed more than once deprecating a collision with the Cabinet. Count Inouye consequently urges concessions mainly on the side of the *Seiyun-kai*. Doubtless the Prime Minister also clearly sees the value of the cards he holds, and is resolved not to make any retreat that involves an abandonment of important conditions. But of course the *Seiyun-kai's* face must be saved as well as the Cabinet's, and it is the difficulty of accomplishing the dual operation that involves delay, and causes many people to declare that the situation is hopeless. That pessimistic view, however, is hard to accept. It is hard to imagine that the Ministry and the *Seiyun-kai*, especially when assisted by a statesman so fertile in expedients as Count Inouye, should be unable to discover a basis of agreement, when both sides are anxious to agree. Meanwhile, the date for the presentation of the Budget Committee's report, namely, the 26th instant, is rapidly approaching. Little time remains for discussion. Of course the Government can solve that difficulty by suspending the Diet for a few days; but suspension would probably be resented by many members, and would at all events add a disquieting element to the situation. It is not unlikely that before going to press there will be a possibility of making some definite statement.

Count Okuma is represented as laughing at a difficulty which he declares to be merely a question of accounts, and which he compares to a dispute between two bank clerks as to how they shall write up a ledger. Far more important in his eyes is the fact that the Cabinet should condescend to hold conferences with political parties in the rooms of a hotel—the upper storey of an inn, as Count Okuma puts it. He finds that very humiliating, and is curious to know what may next be expected.

Just as we go to press news reaches us to the effect that the conferences between the Cabinet and the *Seiyun-kai* have failed. At first it seemed that a settlement had been reached. The Government, on its side, consented to modify the matter of the Chinese Indemnity by selling the bonds to the Deposit Bureau at 70 instead of 80, and promised to appoint a special committee for the purpose of drafting a programme of financial and administrative reforms; upon which terms the *Seiyun-kai* representatives agreed to withdraw their opposition. The complication appeared then to be solved, when an unexpected difficulty arose. The *Seiyun-kai* representatives asked the Cabinet to pledge itself to accept the Budget as amended by the Party, but the Cabinet naturally declined to make any engagement without seeing the amendments. Thereupon the Committee of the *Seiyun-kai* hastily called a meeting of the parliamentary members of the Party, when after an animated discussion, it was resolved by a narrow majority of 3 votes that the Cabinet's proposals must be rejected. The haste shown in summoning this meeting is said to have been due to the fact that every day's delay was found to add to the numbers of the moderates in the *Seiyun-kai's* ranks.

Meanwhile, the Saturday Club of the Upper House held a meeting and passed a resolution to the effect that the Ministerial Budget, being better than that of the *Seiyun-kai*, must be supported. Steps were taken to communicate with the other six sections

of the House, and all of them endorsed the resolution. Thus the whole of the House of Peers stand solid for the Cabinet, and have declared that if the latter surrenders to the *Seiyun-kai*, the Upper Chamber will oppose both the Cabinet and the Party.

A strange situation is thus created. It is now by no means improbable that if the Cabinet's Budget were brought before the Lower House, the Ministry would find a majority in their favour, since the Progressists, the Imperialists and nearly a moiety of the *Seiyun-kai* would vote for them. On the other hand, if any further concessions be made to the *Seiyun-kai*, the Budget will not pass the Peers. Practically the Cabinet's situation is good.

The National Unionists held a largely attended meeting on Sunday, the 22nd inst. and passed a long resolution with regard to Russia's occupation of Manchuria. The resolution sets out by declaring that Russia's occupation of Manchuria is opposed to the preservation of China's integrity and to the security of Korea, and must also prove a source of lasting trouble in Eastern Asia. So long as this question remains unsettled, the restoration of peaceful relations between China and other Powers carries no assurance of permanent tranquillity. On the occasion of the withdrawal of the proposed Manchurian agreement, the National Union—we still quote the resolution—expressed satisfaction that the Japanese Government had brought about that result, but urged that the responsibility devolved upon the Ministry to cause the actual occupation of Manchuria by Russia to terminate. Since then several months have passed. Russia has continued to pursue a course plainly calculated to achieve her own ends at China's expense, and on the other hand the Japanese Government has rightly maintained its attitude of firm opposition to such a result. But the true solution of this problem is to be found in the actual withdrawal of Russia's forces and in her final abandonment of the designs she entertains. To urge upon China the necessity of reflection and upon Russia the desirability of self-restraint can not prove more than a temporary expedient. Doubtless the Japanese Government followed that course, first, in deference to Russia's assurances that she would give up Manchuria as soon as the Court returned to Peking, and secondly because the conduct of the peace negotiations engrossed attention. The National Unionists, on their side, desiring to strengthen the hands of their statesmen, refrained from any expression of opinion and awaited the coming of the proper moment. That moment has now come. The return of the Court to Peking is the signal. The peace negotiations have been concluded; in a few weeks the Central Government will be re-established in Peking; public opinion in China has been roused to the necessity of preserving a region that is the cradle of the dynasty, and the Powers are agreed, on the whole that the restoration of Manchuria must be effected. Japanese statesmen must not lose this opportunity. They must consider the interests of a friendly neighbour, and must establish a basis of lasting tranquillity in the Orient by bringing about Russia's evacuation of Manchuria. If they proceed boldly and resolutely, the people of this country will support them. They must not destroy all that has been hitherto accomplished by failing to put the last touch to the work.

The above manifesto was adopted by acclaim, and the assembly subsequently partook of a banquet at which several speeches were delivered.

Wednesday, Dec. 25.

Yesterday's Tokyo journals contain particulars of the result described briefly in these columns on the 23rd instant. It appears that the *Seiyun-kai* representatives made three sets of proposals, none of which could be accepted by the Cabinet, but that finally an agreement was almost reached on the basis that the Chinese Indemnity Bonds should be transferred to the Deposits Bureau at 70 instead of 80, that the Government would verbally guarantee their trustworthiness as securities, and that measures should be taken with regard to administrative and financial reform, the *Seiyun-kai* on their side promising to withdraw their bills which provide for the treatment of the Indemnity in a special account and for a change in the present system of redeeming public bonds, and engaging to support the Cabinet's railway proposals. But now when a settlement seemed certain, an unexpected difficulty arose. The *Seiyun-kai* representatives had asked in one of their tentative proposals that the Cabinet should promise to accept the Party's amendments of the Budget provided that any point difficult of endorsement should be made the subject of consultation. At the last moment, however, the *Seiyun-kai* seem to have withdrawn the saving clause from this condition, and to have demanded that the Cabinet should pledge itself absolutely to accept the Party's amendments to the Budget. In short, the *Seiyun-kai* required that in consideration of their having yielded with regard to the main issues, the Cabinet should yield unreservedly with regard to minor alterations. The Cabinet refused to give any unconditional pledge of the kind, and thereupon the conference broke up. Subsequently a general meeting of the parliamentary members of the *Seiyun-kai* was summoned. It was attended by 131 members. The General Committee presented a report of the negotiations, and suggested that further *pour-parlers* would be quite futile. Mr. Tada Sakubei then proposed that as the course of the negotiations had shown virtual agreement between the Cabinet and the Party, it would be advisable that each section should appoint two representatives to form a new committee for the purpose of consulting with the Government. This proposal was opposed by Mr. Sameshima, who declared that the views of the Party being now clearly proclaimed, no further discussion of them was necessary. A closed ballot was taken, when 64 voted for Mr. Tada Sakubei's proposal and 67 against it, the moderates being thus defeated by 3 voices. How much significance attaches to this split in the ranks of the *Seiyun-kai* no one can venture to assert at present, but the fact has to be noted that at a friendly *réunion* of the Party held on the evening of the same day in the Maple Club, 58 members of the moderate section were conspicuous by their absence, being in fact engaged holding a *réunion* elsewhere on their own account.

The leader of the "strong-policy" section in the *Seiyun-kai* is said to be Mr. Ozaki Yukio, and the leader of the moderates is Baron Suyematsu, with whom are Mr. Inouye Kakugoro, Mr. Ooka Ikuzo, Baron Kaneko and other influential men. But this analysis is open to doubt.

Mr. Ozaki Yukio has never been an advocate of compromise. His fighting powers as well as his remarkable abilities are fully appreciated. But his present situation is not secure against damaging criticism. Reason is outraged when a Ministry is asked to pledge itself blindly to accept whatever changes a political party may make in the Budget. The changes may be of a minor character,

but if so, that is an argument in favour of not exacting any unconditional promise with regard to them. Briefly speaking, it comes to this, that if the budgetary alterations which the *Seiyun-kai* representatives have in view are insignificant, then to insist upon the Ministry's pledging itself beforehand to accept them, is frivolous and vexatious. If, on the contrary, the contemplated alterations are radical, then the Ministry should be given an opportunity of considering them. It can not be supposed that the voice of the nation will be raised in support of such procedure as that attributed by the press to the extremists among the *Seiyun-kai*. That is the more regrettable inasmuch as the concessions made by the *Seiyun-kai* in other directions indicate an unequivocal desire to avoid a disastrous collision. Of course, to those reading between the lines, it is obvious that the main budgetary amendment contemplated by the extremists was the excision of all appropriations for increasing the emoluments of junior officials, the *Seiyun-kai's* contention being that such increases must be postponed until financial and administrative reforms have been effected. But the nation is convinced that these increases are inevitable, and, further, if the extremists had such a purpose in view, they should have formulated it distinctly, instead of seeking to pledge the Cabinet to blind agreement. Their position is decidedly unfortunate.

With regard to the Cabinet itself, the general opinion seems to be that whereas the Premier and Admiral Yamamoto are in favour of conciliatory measures and of compromise, the Minister of State for Finance and the Minister of State for Justice are showing an implacable mood. There can be no doubt that the difficulty of an agreement was greatly accentuated by the emphatic declaration which the former statesman made to the Lower House on the very eve of the conferences, namely, that under no circumstances could the Government agree to treat the Chinese Indemnity in a special account. Very likely that was the Government's resolve. Indeed, subsequent events go to show that it was. But it could not conduce to the success of an amicable negotiation that one of the negotiating parties should publish an ultimatum when the negotiation was just about to commence.

Wednesday, Dec. 25.

The leaders of the *Seiyun-kai* have apparently recognised the very equivocal character of the situation in which they placed themselves in the sequel of the recent negotiations. At a meeting held on the 24th instant, they adopted several important resolutions, namely; (1) That the appropriation for building barracks in Formosa should be passed. At first it was proposed to eliminate this, as had been done last session, but on the motion of Mr. Tada Sakubei the meeting agreed to approve the appropriation. (2) That the appropriation for the Kure Steel Works should be sanctioned. (3) That the salaries of *hannin* officials of the Central Government should be increased by 10 per cent, making the average 36 *yen* monthly; that the salaries of *hannin* officials of the local governments should be augmented as proposed by the Government, and that the salaries of judicial officials should be increased by whatever amount could be obtained from reductions of the *personnel*, but that no special allowance should be provided for the purpose. They decided, on the other hand, that the Chinese Indemnity must be placed in a special account. This last point, however, is probably a mere matter of form, for the Party's leaders

have already shown in their conferences with the Government that their objection to drafting the Indemnity into the general revenue is based solely on its apparent insecurity, and that if the bonds were assessed at 70 instead of 80, there would be no difficulty.

The result of all this is that agreement between the Cabinet and the *Seiyun-kai* should now be easy. The Party's leaders have seen that to persist in their attitude of opposition would have caused a serious split in their own ranks. The only obstacle to a settlement at the close of the recent conference was that the *Seiyun-kai's* representatives insisted on the Government's pledging itself to accept the Party's amendments of the Budget while those amendments were still in the lap of the future. No inference could be drawn from such a demand except that the Party intended to make drastic amendments which could not possibly obtain the Ministry's consent on their own merits. But at the meeting on the 24th all the important demands of the Government were accepted by the Party, with slight modifications, so that there can no longer be any apprehension as to the nature of the projected amendments. But it remains to be seen whether the solidarity of the *Seiyun-kai* will fully survive the shock of this curious collision. We may add here that the Independent members of the Lower House, numbering some 18 or 19 and including Mr. Shimada Saburo, Mr. Taguchi Ukichi and other important politicians, held a meeting at the *Seiyoken* in Tsukiji on the 24th instant and decided to support the Government's Budget.

Marquis Ito's telegrams to Count Inouye have been disclosed by Mr. Hara Kei in order to prevent misapprehensions. The first was as follows:—

St. Petersburg 29th Nov.—Your telegram about the *Seiyun-kai* has been received. The state of international relations renders it imperative that the country should have a strong and lasting Ministry. With the exception, therefore, of some question vitally affecting the national interests, I can not endorse any collision with the cabinet at this stage. You are at liberty to communicate this to the members of the *Seiyun-kai*.

This telegram was shown to Mr. Hara Kei by Count Inouye, and Mr. Hara communicated its contents to Mr. Masuda and Baron Suyematsu, but it was not made known to any others of the *Seiyun-kai's* committee.

Then on the 16th instant, after the Party's financial policy had been decided at a meeting of parliamentary members, Mr. Masuda sent the following telegram to Marquis Ito:—

The Government proposes to draft the Chinese Indemnity into the general revenue and to make this the basis of the Budget. Our Party unanimously decided to-day that the Indemnity must be placed in a separate account inasmuch as it is an uncertain asset and further there is a better programme of finance than the Government's. Our procedure is framed in accordance with good intentions, as directed by your Excellency, and is not prompted by any desire to oppose the Cabinet. If the latter makes some slight amendments in the Budget there should be no difficulty.

On the 18th instant, Marquis Ito made the following reply by wire, addressing it to Count Inouye:—

The French Government has obtained the consent of the Chambers to raise a loan of 265 million francs on the security of the Chinese Indemnity. Germany has included the amount of the Indemnity in her next year's Budget. It is therefore a mistake to regard this asset as uncertain. It is well suited for restoring the Capital Funds.

At the same time Marquis Ito telegraphed to Mr. Masuda desiring him to ask to be shown the above message. It may be explained here that Marquis Ito's reference to Germany did not carry much weight inasmuch as the portion of the Indemnity included by the

latter Power in her Budget is only the installment to be received next year. No other telegram has been received from Marquis Ito on this subject.

The special committee of the Lower House, which was entrusted the duty of examining and reporting upon the private Bill—i.e. a *Seiyun-kai* Bill—for placing the Chinese Indemnity in a special account, held a final meeting on the 24th instant, and decided to recommend the approval of the Bill, 10 voting for it and 7 against it. The minority will of course present their report also, in the usual order of things.

The Moderates of the *Seiyun-kai* are now said to number 71. They held a meeting at the Hamano-ya on the 24th instant. Ultimately by the intervention of Messrs. Masuda and Ozaki, who came to the restaurant for the purpose of restoring peace, it was agreed that all differences shall be forgotten and that the Party should march in line once more. That means, we take it, that an agreement with the Government is certain.

Thursday, Dec. 26.

The Budget Committee having, in its session on the 24th instant, carried its examination and deliberation to such a point that the general result could be foreseen with sufficient clearness, the Cabinet invited the *Seiyun-kai* to hold another conference. It will be remembered that the last conference failed at the eleventh hour owing to the *Seiyun-kai's* representatives demanding that the Cabinet without seeing the amendments contemplated by the Budget Committee, should nevertheless pledge itself to endorse them. The Cabinet naturally refused, and there the matter ended for the moment. But it had become plain in the course of these negotiations that the moderates held a very strong position in the *Seiyun-kai* and that to persist in a policy of opposition to the Cabinet would be to alienate them altogether. Accordingly, when the Budget Committee met on Saturday, its decisions were guided by a desire to conciliate the moderates, and there resulted a situation which practically removed the Cabinet's difficulty in endorsing the Committee's amendments. Under these circumstances Viscount Katsura invited the representatives of the Party to re-open the negotiation, and after due deliberation the General Committee of the Party decided to accept the invitation. Accordingly, at 4 p.m. on the 25th instant, Messrs. Ozaki and Masuda proceeded to the official residence of the Premier. Viscount Katsura being confined to bed with a cold was obliged to receive the visitors in his sleeping chamber. He was assisted by Admiral Yamamoto, and after a conference lasting for four hours, the following agreement was arrived at, its basis being the third of the series of propositions originally put forward by the *Seiyun-kai*:—

- 1.—That the Cabinet should withdraw the Budget and that the *Seiyun-kai* should simultaneously withdraw the Bill for treating the Chinese Indemnity in a separate account.
- 2.—That the Cabinet should declare the Chinese Indemnity to be a secure item of State revenue.
- 3.—That in the new Budget to be submitted to the Cabinet the Chinese Indemnity Bonds should be valued 70 *yen* instead of 80.
- 4.—That the Government should give its assent to the general scheme of the Budget Committee's amendments; provided that items still undecided by the Committee, especially those connected with the Fixed Expenditures, should be open to consideration according to the result of the Committee's deliberations.
- 5.—That the Government should take practical steps with regard to the questions of administrative and financial reform.

Carrying this compact, Messrs. Ozaki and

Masuda returned to the residence of Marquis Ito, where the members of the General Committee awaited them, and their action having been approved by the committee, the latter repaired, at half-past nine p.m., to the office of the Party, and submitted the result to the members there assembled. A vehement discussion ensued. It appeared that the extremists were by no means pleased to find themselves on the eve of a placable denouement. They insisted that the Party would lose face altogether if it struck its colours in such a manner, and that it should insist at all events on the placing of the Chinese Indemnity in a separate account. The fact is that the *Seiyun-kai*, weakened by the divisions in their own ranks, have been gradually drifting, partly under a desire to obey their President by avoiding a final collision with the Cabinet, and partly in consequence of seeking to prevent a secession of the moderate members, until they finally discover themselves in a position of practical agreement with the Ministry. It would obviously be an act of purely vexatious antagonism did they now insist upon a point which they previously conceded, namely, the exclusion of the Chinese Indemnity from the general revenue. Yet no alternative remains except to desist from further opposition. They were unable to choose between the two courses on the night of the 25th, though they continued the discussion until 12 o'clock, and a general meeting was held at 9 a.m. on the 26th to consider the question. Its result will be known before we go to press. But there is no difficulty in predicting that unless the parliamentary members of the Party endorse the action of its representatives, a serious split in its ranks must ensue.

Thursday, (evening), Dec. 26.

It will be seen from our report of yesterday's proceedings in the House of Representatives that the moderates have carried the day, and that an *entente* between the Cabinet and the *Seiyun-kai* has been established. The necessary changes have been made by the Government in the Budget, and the Party's Bill for placing the Indemnity in a special account has been withdrawn. Farther, the House has decided to pass the Budget before rising for the New Year's recess.

CHINESE AFFAIRS.

Monday, Dec. 23.

It is stated that the first of the resumed conferences with regard to the Manchurian agreement was to take place at the Russian Legation in Peking on the 20th instant, China being represented by Prince Ching and Wang Wen-shao.

Later news gives what is alleged to have occurred at this first conference. Prince Ching is reported to have carried on the whole negotiation, Wang Wen-shao remaining silent throughout. The Prince represented that as a secret agreement already existed between Russia and China with regard to Manchuria, China's chief point now was that nothing should be done to impair her sovereignty in that region. Consequently, she could not agree to the conditions providing for the posting of Russian troops in the district and limiting the number of Chinese troops stationed there. There were other conditions, also, demanding modification, but these were the most important. M. Lessar is reported to have replied that the discussion of details might be deferred to another meeting. How much reliance may be placed on this news we can not tell.

It comes from the *Jiji Shimpō's* correspondent. The allusion to a secret agreement sounds apocryphal.

Although the Chinese Court is now actually *en route* from Kai-fong to Peking, a rumour—published by the *Asahi Shimbun*—declares that Viceroy Yuan has advised their Majesties not to enter the capital until the Manchurian question and the problem of the Tientsin civil government are settled. It is difficult to believe that had Viceroy Yuan deemed delay necessary for these reasons, he would have postponed his recommendation to such a late hour. On the other hand, the advice attributed to him is natural and by no means wanting in astuteness.

It is stated that the Emperor will enter Peking on the 7th January and the Empress Dowager on the 8th.

The problem of restoring the civil government of Tientsin to China seems to be causing some discussion. A conference of the Foreign Representatives is said to have been held for the purpose of considering the matter, when five States—England, Germany, Holland, Italy and Austria—were found to be in favour of retaining the government in foreign hands, whereas five others—Japan, France, Russia, America and Belgium—were in favour of surrendering it. Spain stood neutral. This is a matter of some importance, for Viceroy Yuan is understood to have declared his resolve not to enter his *Yamen* in Tientsin until the civil government of the place is in the hands of China. If the news of this division of opinion be correct, it would appear that the concord of the Powers is not standing the test of practice.

Tuesday, Dec. 24.

The *Tokyo Asahi* publishes a telegram which undertakes to give an almost verbatim report of the conference between the Russian Minister, on one side, and Prince Ching and Wang Wen-shao on the other. It is scarcely possible to place implicit reliance on the report, but its gist may be re-produced. M. Lessar sought to obtain the Plenipotentiaries' consent to the agreement of four articles which had already been accepted by the late Viceroy Li, but Prince Ching and Wang Wen-shao maintained that what Li might have agreed to was one thing and what they were prepared to agree to was another. Asked the views of the Emperor and the Empress Dowager, they replied that Their Majesties would never sanction an agreement which was not calculated to secure the approval of the other Powers. M. Lessar objected that the other Powers were not concerned in a question between Russia and China with regard to Manchuria, but the Plenipotentiaries held firmly to the contention that whatever compact was made must be of a nature to secure the endorsement of Great Britain, the United States and Japan. This conference took place on the 20th instant. The *Asahi's* account will be seen to differ in one respect from that previously published by the *Jiji Shimpō*; for whereas the latter represented Prince Ching as having carried on the whole negotiation on China's side, and Wang Wen-shao as having preserved silence, the *Asahi* makes out that Wang did most of the talking.

The *Nichi Nichi Shimbun* publishes a later telegram from Peking to the effect that on the 22nd instant M. Lessar conveyed to the Chinese plenipotentiaries an intimation that no change could be made in the terms of the Agreement as previously formulated.

It is alleged that what China proposes as the basis of a Manchurian Agreement is the withdrawal of the Russian forces within a twelvemonth; the restoration of the Newchwang-Shanhaikwan Railway on payment of compensation amounting to 700,000 taels, and various other provisions regarding the military situation. These details are published by the *Nichi Nichi Shimbun*.

Friday, Dec. 27.

The *Asahi Shimbun* published on the evening of the 26th instant an extra containing a telegram from Peking to the effect that the Chinese Plenipotentiaries have presented an official document to the Russian Minister taking exception to the following four points in the proposed draft of the Manchurian agreement:—(1) That the Chinese troops in Manchuria shall be trained by French military experts, no other Power being allowed to take part, and that the number and positions of the Chinese forces in Manchuria shall be determined after consultation with Russia. (2) That the Russian forces shall be withdrawn within 3 years, which seems to China too long a time. (3) That the Manchurian mines shall be worked in combination with Russian subjects, no subjects or citizens of any other State being allowed to participate, and that the opening of mines shall be preceded by consultation with Russia. (4) That without Russia's permission no extension of existing lines or construction of new ones shall take place in South Manchuria.

The Chinese Plenipotentiaries are said to have added that the above are the clauses to which principal objection is taken but that other minor details will also require consideration. They ask, however, for Russia's answer with regard to the foregoing, and they declare that they have the instructions of the Throne to conduct the negotiations in a spirit of the fullest amity and with due regard to the rights of other States.

The Chinese Court was to arrive at Ching-ting on the 20th instant. Ching-ting is the next town to Pao-ting. Rumour now insists that Their Majesties will remain in Pao-ting until the Manchurian question is settled.

There is a report that General Tung Fuh-shang is dead.

A body of troops, said to be twenty thousand strong, from Viceroy Yuan's army has reached Pao-ting.

The *Jiji Shimpō* publishes a London telegram to the effect that the Chinese Government has satisfied England's scruples with regard to the Manchurian question. Exactly what that means it is difficult to conjecture. England has asked for nothing except that any arrangement made by China shall conserve the treaty rights of Great Britain.

The Chinese Representative in Sōul has asked the Korean Government to give to Chinese subjects the same fishing privileges on the coasts of the peninsula as those enjoyed by Japanese.

THE QUESTION OF THE RAILWAYS.

The question of the State purchase of private railways and their hypothecation as security for a foreign loan is again beginning to occupy a prominent place in public attention. It receives the support of many leading men of business, notably Baron Shibusawa and the members of the Tokyo Chamber of Commerce, as well as the great majority of the members of other Chambers

of Commerce throughout the country. The element of a foreign loan does not figure conspicuously in the project as now again brought forward in a memorial addressed by Baron Shibusawa to the Government, but there can be no doubt that the measure is generally regarded as a means of obtaining the much-needed supply of floating capital. Briefly speaking, the plan is that the Treasury should purchase the private railways at a price calculated by taking their average net earnings for the past three years, multiplying the total by 25 and issuing four-per-cent. bonds for the resulting figure. These bonds would remain for three years unredeemed, and would thenceforth be redeemed in 25 years at the rate of twelve millions annually. The aggregate net earnings of the nine principal private lines at present are 12,271,713 *yen*, and the earnings of the State lines are 8,819,277 *yen*, the total of the two being 21,090,990 *yen*. It is calculated that, at the conclusion of three years, this total will be augmented by 5,061,837 *yen*, in consequence of extensions of the lines as now planned and of developments of traffic. Hence the funds flowing into the Treasury from the railways at the end of three years would aggregate 26,152,827 *yen*, and this also would be an increasing quantity. Now the purchase prices of the nine principal private roads, assessed on the above basis of profits, would be as follows:—

	Yen.
Nippon Railway	121,575,840
Sanyo Railway	43,623,269
Kobe Railway	8,321,844
Kiushu Railway	59,164,785
Kwansei Railway	24,282,398
Tanko Railway	24,884,622
Kyoto Railway	2,453,692
Hokuyetsu Railway	6,558,250
Nishinari Railway	544,500

Total..... 291,409,200

The interest payable upon this amount would be 11,656,368 *yen*, and the sinking fund being 12,000,000 *yen*, a total of 23,656,368 *yen*, the sum remaining would be 2,496,459 *yen*, which, together with the gradual increment of earnings, should be applied to improvement and extension. Moreover, during the first three years the Government would receive the total earnings of the lines, and would have to pay out only the interest, namely, 11,656,368 *yen*, as against profits of at least 12,271,713 *yen*, while at the end of 28 years the State would find itself in possession of a very large and unencumbered source of yearly revenue.

Such is the plan mapped out in Baron Shibusawa's memorial. He makes no direct allusion to a foreign loan, but he suggests that the bonds should carry their sterling equivalent on their face, and should be payable in sterling to all foreign holders. Apparently they would be issued at par, but whether the shareholders would consent to receive at par bonds which would not fetch more than 80 in the open market, the memorial does not say. It may be assumed, however, that Baron Shibusawa is not without exact information as to the attitude the various companies would assume towards his scheme. Of course, so far as the State is concerned, the sacrifice demanded of it is that it should surrender its present railway receipts—some nine million *yen*—for the sake of carrying out the purchase programme. It would ultimately be found to have devoted 167½ millions, approximately, to the acquisition of property producing about 15 or 16 million *yen* annually. That would be a fine transaction. But the main consideration is that the nation has fixed the greater portion of its floating capital in

railways and other enterprises, and that much inconvenience is now felt in consequence. A state of affairs exists which plainly impedes the development of the country's resources, and if those best qualified to judge—as merchants and manufacturers certainly are—believe that relief might be furnished by the scheme indicated in Baron Shibusawa's memorial, it is the Treasury's duty to give full consideration to the matter.

AGAIN THE OLD QUESTION.

It is our desire to consider fully and fairly every argument advanced in good faith with regard to the house tax, and we therefore devote a few lines to the position taken by Mr. Snodgrass in a letter published in our correspondence columns.

The inference which Mr. Snodgrass deprecates as likely to be drawn from our previous remarks is precisely the inference we intended to suggest. It is our contention that no foreigner settling in Japan has any right to expect that land will be available for his occupation on terms cheaper than those obtainable by a Japanese subject. Mr. Snodgrass has frequently made a comparison between the land rent paid by foreign land-holders and the land tax and land rate levied from Japanese subjects, and for the purposes of his comparison he has always placed on one side of the account the whole of the foreign payment, as though it were entirely a tax. We reply that it is not a tax alone or even chiefly, but is first, a rent for the privilege of occupying the land, and secondly a tax upon the land. We further say that if a Japanese subject desired to obtain the use of land in Tsukiji or its neighbourhood for building purposes or for any purpose whatsoever, he would have to pay a rent several times larger than that paid by the foreign lessees. Mr. Snodgrass admits the fact, but seeks to make the point that whereas the Japanese subject would pay rent to the owner of the land, the foreigner pays it to the Government. Precisely. But it happens that the Government is the owner of the lands leased to foreigners. If those lands became vacant now, the Government would not think of letting them to its own subjects at a rent even approximately as low as that paid by the foreign holders. The trouble with Mr. Snodgrass is that he can not persuade himself to regard the 28 *sen* per *tsubo* paid by foreigners as anything but a tax. Yet that payment has invariably been regarded as rent, and the holders of the lots used to be uniformly called "land-renters." If Mr. Snodgrass can show by any valid line of reasoning, that foreign settlers were entitled to receive rent-free land from the Japanese Government when the settlements were first assigned, and if, further, he can demonstrate either by documentary evidence or by proof of practice that they actually did receive rent-free land, then we shall agree with him in regarding the whole of their present payment as a tax. But so long as any validity attaches to the principle, elsewhere universally applicable, that unless the ownership of land be acquired, rent must be paid to the owner for the use of the land, just as long must we contend that the foreign lessee, not being an owner, pays rent to the owner. In the latter part of his letter Mr. Snodgrass advances the plea, in one breath, that many Japanese subjects pay taxes only on the lands held by them, and makes the admission, in the next, that to give the land to foreigners rent-free would not have been just and was not to have been expected. We

fail to detect the relevance of the former contention in the face of the latter admission, but the point is worth further reference since Mr. Snodgrass appears to labour under the impression of a former correspondent that the initial payment made by foreigners differentiates them from mere renters. But that payment was never intended to represent the value of the land. Its declared purpose was to recoup the Government for expenses incurred in levelling and preparing the settlements. Figures will perhaps convey a clearer idea than words as to this subject. The area of the land hitherto assigned by the Government to foreigners in the Tsukiji Settlement is 25,641 *tsubo*, and the total initial price paid by its holders is 43,148 *yen*, or 1.68 *sen* per *tsubo*. Is it conceivable that the latter figure recouped the Authorities for the sums expended in building the sea-wall, making roads and otherwise preparing the settlement? We have no record of the monies laid out by the Government on the various Settlements—Tokyo, Yokohama, Hakodate, Kobe, Osaka and Nagasaki—; but this we do know, namely, that the sums obtained for the lands in all these places aggregated 409,000 *yen*, whereas in Nagasaki alone five hundred thousand *yen* were expended in compensating Japanese citizens whose lands had to be taken for forming one half of the settlement area. So far from receiving the equivalent of the value of the lands, the Treasury unquestionably expended a very large amount in preparing them, and has never been even partially recouped. The drainage system in Yokohama alone must have cost hundreds of thousands of dollars. The situation then is that the foreign lessees are occupying lands on which Japan has spent large unrecovered sums, and that, further, the Treasury had to pay out annually for municipal purposes in the Settlements more than a hundred thousand *yen* over and above the total receipts from land rents and other local taxes. That can scarcely be called a just situation.

FOREIGN TRADE.

During the middle period of this month—10th to 20th instant—the exports from Japan totalled 8½ million *yen* and the imports 5½ millions, so that there was a balance of 3 millions on the side of the former.

The details will be gathered from the following table:—

	Ten days. Yen.	From January. Yen.
Exports.....	8,552,627	243,988,884
Imports.....	5,506,902	251,187,646
Balance.....	3,045,725	7,193,762
Gold exported.....	110,000	11,477,852
Gold imported.....	281,196	10,553,287
Balance.....	171,196	924,565
Silver exported.....	61,589	2,539,638
Silver imported.....	32,420	307,810
Balance.....	29,169	2,231,828

Classified according to each port the following figures show the business done from December 10th to December 20th:—

	Exports. Yen.	Imports. Yen.
Yokohama	4,626,633	1,667,015
Kobe	2,595,214	3,346,624
Osaka	477,326	148,977
Nagasaki.....	182,552	171,516
Hakodate.....	102,844	44,902
Niigata	—	4,549
Moji	436,559	40,237
Shimonoseki	19,431	82,889
Kuchinotsu	112,668	173
Total.....	8,552,627	5,506,902

EARLY DECAY OF THE JAPANESE.

The old question of early maturity and early decay among the Japanese has been raised again by the *Nippon* and opinions are invited on the subject, which, as will have been seen from the last "Monthly Summary of Current Literature" published in these columns, it does not consider by any means settled. Is there not a tolerably conclusive answer within the field of every-day vision, so far as concerns the question of early decay, at any rate? Do we not see many comparatively old men in the enjoyment of thorough vigour, both physical and mental; vigour such as would be a subject of comment even in the Occident? The names of Count Inouye, Marquis Ito, Baron Shibusawa and Mr. Okura Kihachiro need alone be mentioned. Here are four prominent men all well on in the sixties; all as energetic and competent to discharge business as they were twenty years ago, and all astonishingly juvenile in appearance. They seem to offer strong evidence that the theory of early decay has at least numerous exceptions. It would not be unreasonable, perhaps, to expect that in a subtropical climate rapid growth and possibly rapid decay ought to be the general rule. But, speaking from our own observation, we should be disposed to say that hale and energetic old age is as common here as it is anywhere else. Doubtless some responsibility rests on the old-time custom which directed that a man should step aside at the age of 50, or at latest 60, in order to make room for his juniors. An idea has thus been educated that after 50 or 60 decay of moral and physical powers becomes so pronounced as to dictate the expediency of the *inkyo* habit. But history shows that the custom of segregating oneself from the world of affairs on the threshold of old age had its origin in the religious pessimism of Fujiwara days, and was quite unconnected with physical or mental decay.

"A WHITE AUSTRALIA."

The Hon. Sir Horace Tozer, writing in the *Empire Review* about the question of a white Australia, says:—

Japan can hardly complain of Australia's desire to manage her own affairs as to her own people seems best. Japanese legislation is not over liberal to Australians, and in their military schools the Japanese make no secret of their ultimate aims to acquire territory in Australia.

Sir Horace Tozer must have been greatly misled, or else he is one of those not uncommon writers that speak without serious thought. His statement that "Japanese legislation is not over-liberal to Australians" has no foundation whatever. Japanese legislation does not discriminate in the smallest degree against Australians. Her treaties are absolutely impartial in that matter, and if Sir Horace Tozer were required to give any practical illustration of his assertion, he would be much embarrassed. As for his second allegation that "in their military schools the Japanese make no secret of their ultimate aims to acquire territory in Australia," the only term applicable to it is "pure silliness." No such doctrine has ever been propounded in Japanese military schools within the knowledge of those best qualified to speak. If Australia's anti-Japanese legislation rests on any chimerica of the kind—which we do not believe—she is battling with phantoms.

KOREAN NICKELS.

The problem of the coinage of nickel pieces in Korea seems to be more complicated than might be imagined at first sight. French citizens, American citizens, and Japanese subjects are all said to be engaged in the lucrative operation, and the possibility of restraining the last-named is said to be dubious, whatever may be the case with regard to the two first. The treaty between Japan and Korea provides that "in case any subject of either of the two countries counterfeits the coin of either of them, he shall be punished according to the laws of his own country." But the laws of Japan do not provide for the case of a Japanese subject counterfeiting the coin of a foreign country within the borders of that country. The Criminal Code enacts merely that if a Japanese subject counterfeits the coin of a foreign country within the borders of that country, he shall be liable to imprisonment. There is no provision that covers the case of a Japanese subject counterfeiting foreign coin in a foreign country. Evidently no such provision would be inserted under ordinary circumstances, for the duty of restraining offenders of that nature devolves upon the country where the offence is committed, and Korea's incompetence to discharge the duty is due solely to the fact that her judicial autonomy is limited by the treaties. Japan, of course, is bound to enact the necessary legislation without a moment's delay. It was constantly and justly contended in her behalf during the days of Consular Jurisdiction that the Powers exercising judicial functions within her realm were under the strongest moral obligation to provide that their assumption of such functions did not interfere with the preservation of law and order. She has now to apply the fable to herself in Korea. We do not know how it is with regard to the laws of America and France, but there can be no doubt as to how it ought to be.

FREEDOM OF SPEECH.

The incalculable injury inflicted upon international relations by the writings of some newspapers is now pretty generally recognised. A case in point is the German press. Judged by the articles and paragraphs persistently published in Germany during the past two years, England and everything English are cordially hated by the German nation; so cordially that whatever forbearance or magnanimity England may show, she must reckon Germany among her declared foes. On the other hand, Germans who have no connexion with journalism deny emphatically that the temper of their nation can be inferred from the writings of its press; insist that Englishmen must not attach the same importance to German journalistic utterances as they attach to the utterance of their own newspapers, and allege that despite this unceasing vehemence of attack, Germany is at heart friendly to England. It may be so, and we trust that it is. But if it be so, what shall be said of German journals? Can they be regarded either as exponents of domestic public opinion or as contributors to the general good of mankind? On the other hand, German editors may with perfect justice retort that English newspapers, which are admittedly representatives of English opinion, showed a spirit of marked unfriendliness in criticising Germany's conduct during the war of 1871, and that what is happening now is merely repayment of that old debt with compound interest accumulated during thirty years. There is no adequate answer to such

a retort, though we may be disposed to plead that the rate of interest is very high. The accusation is thus brought round, to British newspapers, and again the fact emerges that the press is, in some respects, a factor of mischief. What is the reason? Probably it is to be found in the impersonality of the newspaper; in the editorial "we," which while imparting a fictitious plurality, and therefore weight to the utterances of some self-sufficient scribbler equipped with no qualifications but assurance and glibness, enables him at the same time to shirk the consequences of identification. Signed articles would surely serve in some degree to check scurrility and slander. A man writing over his own name would hesitate to say things which he dared not utter in society. But will the practice of signing articles come into general vogue? Not for many a year, according to present appearances. The "we" is too convenient a weapon from the editorial point of view, and besides it really seems as though the public liked to be addressed in that sovereign form of speech; liked to have opinions suggested with a semblance of strong authority. Mr. C. S. Grinnell, writing in the *Atlantic Monthly*, says that "the newspapers, with all their faults, are among the most constant aids to the vigilance which is the price of the liberty that is protected by the courts." "With all their faults"—that is the point. How many newspapers could be fairly classed as honest guardians of public morality compared with the number that would have to be classed as simply vendors of slander?

BALL AT THE RUSSIAN LEGATION.

A brilliant ball was given by His Excellency the Russian Minister and Madame Iswolsky at the Russian Legation in Tokyo on the 19th instant. The guests were very numerous, including all the Ministers of State and members of the Corps Diplomatique, several of the most prominent statesmen out of office, and the principal officers of the Army and Navy stationed in Tokyo. At about ten o'clock His Imperial Highness Prince Fushimi arrived, and after a short interval for conversation, supper was served, dancing being deferred to a later period. This departure from the usual routine proved very convenient, for it enabled the Prince and such of the guests as felt no interest in the dancing to take their leave immediately after supper, without their departure causing any break in the continuity of the party. Thereafter dancing was kept up with great spirit until a late hour, the ball proving in every respect a marked success.

THE WAR AND NAVAL DEPARTMENTS.

It is rumoured that in consequence of Baron Kodama's resolve to devote himself solely to the duty of administering Formosan affairs, and for that purpose to resign the portfolio of War, Viscount Terauchi will be appointed to succeed him at the latter Department. As to the Viscount's replacement in the position of Vice-Chief of Staff, the only forecast is that one of the officers now belonging to the Head-Quarters Staff will be appointed.

Field-Marshal Marquis Oyama is said to have decided that he will not at present resign the position of Chief of Staff.

Vice-Admiral Baron Inouye, now commanding at Yokosuka, has been raised to the rank of Admiral. There are thus four full Admirals, namely, Marquis Saigo, Viscount Ito, Count Kabayama and Baron Inouye.

FUNERAL OF MR. E. H. HOUSE.

The funeral of the late Mr. E. H. House took place on the 21st instant and was attended by a large concourse of friends. Among the most conspicuous figures were their Excellencies the Minister of State for Education and Colonel Buck, United States Representative, Admiral Viscount Enomoto, Lieutenant-General Viscount Terauchi, Mr. Sonoda Kichichi, Professor Hozumi, Professor Mitsukuri, Mr. Yokoyama, Mr. H. Sato, Dr. Green, Mr. J. Griffin, Mr. Scidmore, Baron Kanda, Mr. Yoshida, representing the Minister of State for Foreign Affairs, Count Okuma's Private Secretary, Mr. Cox, Dr. MacDonald, Mr. A. Brent, &c. The cortege left the residence of the deceased exactly at one o'clock. It was escorted by a strong guard of honour, and the numerous floral offerings and vehicles constituted a procession of considerable length. In accordance with the wish of the deceased, all religious observances were dispensed with, so that the ceremony at Aoyama consisted solely of music by the Band of the Imperial Household and addresses by friends. The first address was delivered by Mr. Oishi, Count Okuma's Private Secretary, who said:—

It was Count Okuma's intention to attend in person and pay a tribute to the memory of the late Mr. E. H. House, whom he had known intimately for many years. But an insuperable obstacle at the last moment prevented him from carrying out that intention, and he has therefore delegated me to speak in his behalf. Mr. House's association with Japanese foreign affairs commenced when he proceeded to Formosa in 1876, accompanying the Japanese expedition thither in the capacity of special correspondent. He rendered excellent service on that occasion, not only by his account of the campaign, but also by faithfully and succinctly recording the facts that led up to it. Subsequently he laid this country under a deep obligation by his advocacy of her cause, especially in connexion with the Shimonoseki Indemnity. His writings on that subject greatly influenced public opinion, and it may be said that to his representations was largely due the restoration of the United States share of the Indemnity. It is with profound regret that this country receives the news of his death.

Captain Brinkley spoke next. He said:—

Friends—The man whose body we consign to the grave to-day and whose memory we have met to honour, was worthy of the homage we desire to pay him. For he was remarkable alike from a literary point of view, an artistic point of view and a philanthropic point of view. From a literary point of view, because, among all those who have been connected with foreign journalism in the Far East, his pen was incomparably the ablest, and because also in the higher and less accessible domain of book writing he earned no small distinction. From an artistic point of view, because music and the drama were the loves of his life, and in both he won the applause of the public. And from a philanthropic point of view because he devoted his ability and his energies to combatting the racial prejudices which are the disgrace of this twentieth century. But highest in his epitaph must be written a fact which he himself would have most desired to be remembered, the fact that he was the friend of Japan; her friend in the distant days, now more than a quarter of a century ago, when to say a word on her behalf or to plead for any international recognition of her rights was to provoke a storm of obloquy and even to incur the charge of treachery to the interests of one's own country. Japan has now won for herself such a place among the nations that no foreign voice need be raised any longer on her account. But although her present position vindicates the advocacy of those that espoused her cause in the early years of *Meiji*, when she stood on the threshold of her modern career, it can not mitigate the pain they suffered for her sake. Whenever, then, the name of Edward

Howard House is spoken, let it be remembered that he was Japan's pioneer friend, and that he fought her battles in the time when opponents were numerous and allies few. Now the long day's work is done. We lay him in a grave hallowed by a nation's gratitude.

Professor Hozumi, having explained that he appeared as the representative of the students who had profited by the instructions of Mr. House in the early years of his residence in Japan, read the following oration:—

I reverentially offer this address before the bier of the late Mr. Edward Howard House, on behalf of the students whom he taught. At the beginning of the *Meiji* era, when the Government was endeavouring to promote education, Mr. House served as instructor in English in the *Nanko* of the Imperial University. The *Nanko* was the successor of the *Kaisei Gakko*, and Mr. House was the principal teacher. In the dual capacity of instructor and organizer he rendered valuable assistance. Education was then in its infancy in Japan and organization was incomplete. The services of Mr. House at such a time were of special assistance. He was a man of exceptional abilities, and remarkable singleness of purpose, who pursued with unflinching courage whatever aim he had set before himself as right and just. His manner of teaching was most conscientious and painstaking, and it is in no small degree due to his instruction that we, his former students, have won our present positions. In countenance and demeanour he seemed gentle and full of amiability, but behind this appearance of suavity there was the true spirit of *fortiter in re*. Thus we all regarded him as an inflexible parent, and he treated us as loved but not indulged children. That he possessed high literary abilities and was exceptionally qualified in many branches of learning are facts too well known to call for comment, but we, his pupils, can say that we have never known a teacher possessing such personal magnetism or such a power of imparting instruction. It is nearly thirty years since we enjoyed the benefit of his teaching, yet his gentle but commanding countenance is still before our eyes, his persuasive voice still sounds in our ears, and the instruction he gave us still lives in our memory. All these things are there, but alas! the man himself is no more. He is gone, but not his ashes alone will remain in our country. There will remain also the students he educated, some in official positions, some in private, but all serving their country through his aid. The flower is crushed but its perfume is imperishable. May the knowledge bring some satisfaction to the spirit of the departed! It was his last wish that no religious rites should be performed at his grave. Therefore we now merely bid him a long farewell, and beg that his spirit will receive this address in lieu of incense and litanies.

Mr. G. H. Scidmore then read the following.

FRIENDS OF MR. HOUSE:—I have lived in Japan during the greater part of the past twenty-one years and I regard as one of the pleasantest features of that sojourn the close friendship of Mr. House. I knew him intimately and I feel it a great privilege to testify in his honour to-day. Nearly all of you know something of the brilliancy of his intellect and of his complete mastery of his mother tongue, as shown in the work of his pen. In social intercourse his mental forces were more striking. Added to these great equipments he possessed a chivalrous nature with a staying, fighting quality that led him to sacrifice himself when he believed that he was in the right.

Toward those who had earned his confidence he was true and constant.

Toward those who were dependant, or needed his help, he was generous to a fault.

The number and character of those I see here present, to pay homage to his remains, are sufficient proofs that he left many and worthy friends to mourn his death.

The last address was read by the Vice-President of the Meiji Musical Society.

With profound regret we bid farewell to the adviser of our Society and our valued instructor, offering at his bier, though with unskilled hands and instruments some of the music that he loved

and taught us to love. We pray that he may listen to it.

UYEHARA, Vice-President of the Meiji Musical Society.

Flowers were then laid on the bier by the mourners, one by one, and the ceremony came to an end, the remains being taken to Meguro for cremation, and the ashes subsequently to Yanaka for interment.

A correspondent writes:—"In your obituary notice of Mr. House, you omitted all reference to his lesseeship of the St. James's Theatre in London, which he held for about 5 years before he came out to Japan. He did excellent work there, for he pulled the old bankrupt house out of its difficulties, and gave it a grand name by the excellence of his entertainments." We were not aware of this incident in Mr. House's career. In fact his life outside Japan was little known to us.

The leading Japanese journals contain most appreciative notices of the late E. H. House. They speak in high terms of his ability as a writer, and say that Japan can not forget the friendship he showed to her. At the same time, they recognise that much of the value of his advocacy was impaired by the extreme character of his views, and by his inability to discover any categorical division of the public except into friends and enemies.

NOSES.

One of the latest wonders of surgery is a paraffine nose. The discoverer of this curiosity is a Viennese surgeon, by name M. Gersuny. It appears that one of the most difficult operations of surgery is to raise to normal proportions a nose that has been lost or mutilated or misconstructed by nature. In the first place, a nasal skeleton has to be made, then it has to be established *in situ* with a thin piece of bony tissue cut from the frontal bone, and then it has to be covered with skin. But the Viennese surgeon substitutes for these intricate manœuvres the simple process of injecting under the skin of the defective organ a quantity of vaseline-paraffine which has been liquified by heat. The mass thus introduced is then shaped to whatever form is desired, and is left to solidify, which it does at the temperature of the body. Experiments show that it is not absorbed, but there is gradually produced a web of connective tissues which unites and traverses all the parts of the injected vaseline. The same method has been applied to replace a jaw-bone. Its greatest triumph is thus described:—

It is well known that natural cavities, as the stomach, the bladder, the terminal portion of the great intestine, etc., are formed by muscular rings called sphincters. When these rings are destroyed, the cavity remains open and the contents escape. Never has a surgeon been able to reproduce a sphincter, destroyed by a wound or a pathologic process. This is done to-day by the injections of vaseline-paraffine. M. Gersuny cites as notable among his observations the case of a woman whose vesical sphincter and urethra had been destroyed by an ulceration. To remedy this state of things many auto-plastic operations had been attempted, but in vain. M. Gersuny then decided to inject vaseline under the mucous membrane which bordered the orifice left by the destruction of the sphincter. This was done and the patient was thus relieved of her infirmity. These few examples will suffice to make the public appreciate the value of the method.

It is will be observed that a new risk is thus added to the marriage lottery. Hitherto a man's chief solicitude has been to ascertain whether his intended has false teeth or hair. Henceforth he must consider also the question whether she has a paraffine nose.

NOTES ON CURRENT EVENTS.

The *Nichi Nichi Shinbun* announces that the Princess Imperial is again *enceinte*, and that the news has been received with much rejoicing in the Court circle.

A telegram from Mayebashi, dated the afternoon of the 21st instant, says that the Thirty-ninth Bank closed its doors on that day. The Bank has its head office in Mayebashi and a branch in Tokyo. Its capital is 1,400,000 *yen* and of that amount 945,000 *yen* is paid up. The bill which precipitated the bank's difficulty was for 66,000 *yen*, but the real trouble is said to have been a sudden demand for the payment of debts due to two other banks. This Thirty-ninth Bank was connected chiefly with the silk trade, and its disaster is reported to have caused something like a panic in Mayebashi. But although the shareholders will lose, there does not seem to be any idea that creditors will suffer.

The above Society, which is practically identical with the National Union, entertained the new Chinese Minister, Mr. Tsai, at the Maple Club on the 21st instant. There was an attendance of about forty, all prominent men. A report was presented showing that five prefectures had offered to send students at public charges to the Society's school recently established in Shanghai, and that a large number of Chinese having announced their intention of coming to the school in Tokyo, the building at Akasaka had been changed for a much larger one in Kanda.

A large number of prominent personages assembled on Sunday at Ikegami to pay a tribute to the memory of the late Mr. Hoshi Toru. The day had no special numerical relation to the date of Mr. Hoshi's assassination; it seems to have been chosen simply because the Diet is now in session. Mr. Kataoka Kenkichi spoke on behalf of the *Seiyukai*, and the heads of the various sections of the Party also delivered addresses. One of our Tokyo contemporaries, describing the ceremony, truly observes that were Mr. Hoshi living, the difficulty of finding an exit from the present political dilemma would probably be soon solved.

The suspension of payments by the Thirty-ninth Bank in Mayebashi has naturally led to a run on several other banks in that town, and the year seems likely to close under painful circumstances in the centre of the silk-producing district.

Within the first two hours of the opening of the Tokyo Local Court on the 23rd instant, no less than 80 applications for permission to become bankrupt were presented. Tokyo journals justly remark that the state of business in the capital may be inferred from this fact.

The graduation ceremony of the Artillery and Engineers College took place on the 23rd instant. The Emperor was unable to attend. Six officers were specially distinguished, four of them receiving swords, and two of them gold watches from the Sovereign. Altogether the graduates numbered 274.

On the 23rd instant some 400 workmen employed at the Abo Coal Mine on Kayakujima near Nagasaki, attacked the offices, and quite a fierce fight ensued, resulting in the deaths of one of the officials and four of the assailants. No cause is yet assigned.

On Friday the Municipal Authorities of Yokohama are to issue a final notice declaring

that house tax from the second half of 1899 to the close of 1901 must be paid before the 20th of January. An intimation has already been addressed by the British Consul to his nationals, advising them to pay under protest if the Local Authorities adopt extreme measures.

"HIRELINGS."

The *Berliner Neueste Nachrichten* repeats the silly charge that the British army is made up of "hirelings." Speaking of English procedure in South Africa, it says:—

The only circumstance which can be admitted in extenuation is, perhaps, the fact that in South Africa the soldiers employed by England are hirelings and not an army recruited under the obligation of universal service. For this reason we repeat it is an insulting insinuation to make any comparison at all between the English Army and the German army of 1870.

One can not but wonder at the thoughtlessness of a newspaper making such statements. If this *Berliner Neueste Nachrichten*—which, it may be mentioned, is the property of Herr Krupp of Essen—paused for a moment to reflect, it would see that with the exception of the rank and file the whole German army is made up of "hirelings," as is the whole of every country's army. The officers and the non-commissioned officers are all "hirelings." England does not compel any of her people to become soldiers. She has been able to get along hitherto without imposing that painful burden on them. Perhaps it offends some other nations that she should be so fortunate. But before they bring against her the ridiculous charge that she uses hirelings to fight her battles, let them remember that all their own officers and most of their non-commissioned officers are "hirelings."

MATCHES.

It may prove a matter of considerable importance to Japan that a new match-making machine of great capacity is said to have been discovered in America. Match-making has become a flourishing industry in this country. Most of the work is done by children, the cost of labour being thus greatly reduced. But children alone can not possibly compete with a machine which turns out nearly a million matches per hour, and can be operated by five boys, whereas the older machines required the services of twenty-five men. A description of the new process is given by American journals:—

The split wood is sawn crosswise of the grain into two-inch lengths, and the splints are cut from these blocks in a specially designed planing tool consisting of two rows of thirty-two knives each. As the knife makes 250 strokes per minute, the capacity of each machine is nearly a million splints per hour. The splints are first dried by hot air and then gathered up and placed in the hopper of a cleaning machine. From the cleaning machine the splints are taken to a straightening machine, where they are shaken down until they arrange themselves side by side in long, parallel rows. They are picked up and put in little boxes four inches deep, two inches wide, and fifteen inches in length. These holders are carried to the large match-making machine proper.

This machine finishes the match in one continuous operation; dipping it in paraffine wax, tipping it with phosphorus, drying it out, and delivering it ready for shipment, the whole operation taking thirty-two minutes, and the matches being turned out at the rate of 6,000,000 per day of ten hours. The machine may be described as an endless belt, six hundred feet in length, known as the carrier, which extends up and down the length of the room. The belt travels with an intermittent motion at the rate of nine inches a stroke and thirty strokes a minute. Each link of the belt consists of a set of transverse slats, known as a block, and in each block are placed four hundred splints. After the splints have been inserted no further handling is necessary, each block being successively dipped in wax, dried, tipped in phosphorus, and again dried, and finally delivered as finished matches ready for packing.

THE BOOKSHELF.

The Sinner and the Problem, by Eric Parker. London, Messrs. Macmillan and Co., Yokohama, Messrs. Kelly and Walsh, Ltd. Mr. ERIC PARKER has a quaint wit and a decided aptitude for telling a tale, but we wish he had not thought it worth his while to ape the mannerisms of bigger men. The story which he has to tell in his queerly-named book deals principally with the thoughts and wayward moods of two English school-boys, and incidentally the story-teller hints at his own love affair. As a study in youthful psychology the *Sinner and the Problem* is very interesting, but the author mars his work by attaching labels to his characters instead of names. Thus we have one boy dubbed *The Sinner*, the other *The Problem*; the principal feminine character appears as *The Lady of the Lake*; an assistant school-master is sketched as *The Chief Butler*, his colleague as *The Other Man*; the head-master as *Mine Host*, and so on and so forth. It is a literary fancy, as you will, but it would have lent a great air of sanity to the story had Mr. Parker dealt in the common names of Tom, Dick, Harry, Smith or Thompson. For all that the book is worth reading, and when the author touches on descriptions of scenery or the joys and delights of an English summer day he rises above the level of the average novelist.

"Some English Conversations."

A friend—not the publisher—sends us a copy of a little book entitled "Some English Conversations," by Messrs. T. I. Chapman and S. Kudo. The idea of the authors is to introduce Japanese students to American slang, and in a section of the educational world there appears to be some indignation that Japanese youths should become familiar with such terms as *grind* for *study*, *foxy* for *astute*, being able to *cat nails* as an expression of great hunger, *that is out of sight*, for *that is good*, and *forking out* for paying. Truly we fail to see the "why not?" It appears to us that if there be folks who desire to study slang, there may reasonably be authors to cater for their fancy. We have slang dictionaries in England and the Japanese student will not be harmed by possessing a *gradus* to slang. Mr. Chapman's preface shows that he quite appreciates the situation, and that he offers his conversations to the curious rather than to the studious. But it is amusing to see how wholly unable Mr. Kudo has been to find Japanese equivalents for his collaborator's phrases. Thus "that is out of sight: you always had the knack of making rarebits," becomes in the Japanese: *Ko wa seiteki ni joto da. Kimi wa rarebit wo koshirayaru no wa itsudemo joudayo*; "Why in thunder don't you swear off," takes the form of, *naze kimi wa karuta wo yosanai ka*, and "I will if it takes a leg" is solemnly rendered *yosarureba yosu sa*. Mr. Kudo would find in the pages of Japanese *shosetsu* a much more picturesque and apposite collection of phrases.

DIPLOMATIC.

Mr. Motono, hitherto Japanese Representative in Belgium, has been appointed Minister in Paris.

Mr. Hayashi, Japanese Minister in Seoul, has been raised to the first rank of high officials.

Mr. Murota has been appointed an official-in-waiting of the Golden Pheasant Chamber.

THE KOBE WATER WORKS AFFAIR.

We read in the *Hochi Shimbun* that the unhappy affair of the Kobe Water Works has been at length settled owing to the intervention of Baron Shibusawa. The arrangement, according to the *Hochi Shimbun*, is that the Kobe Municipality buys back at cost price one half of the 500,000 yen worth of bonds delivered to Mr. Morse, and that it exchanges the remainder for bonds carrying on the back a distinct pledge of redemption in sterling at a fixed rate. As to the costs of the legal proceedings, nothing is said to have been settled, but rumour alleges that they are to be shared. This seems to be an equitable arrangement.

FORMOSA.

Between November 16th and December 10th a vigorous campaign has been carried on in Southern Formosa against the insurgents. Twelve of the leaders and 156 of their followers has been killed or captured.

The expeditionary force sent against the Formosan insurgents expected to have its work done by the 10th instant, but was delayed owing to the difficulty of penetrating to the fastnesses of the bandits. The force returned to Tainan on the 17th. Its total casualties had been 21 killed and 20 wounded.

"THE DECADENCE OF ENGLAND."

Mr. Poultny Bigelow continues to write under the above title in the *Independent*. He prefaces his last essay by the questions: "Is there an American who does not love England?" and he answers it by saying, "I suppose not." On the principle of loving her himself, he chastens her. His present indictment busies itself at the outset with London tailors. What he has to say about them is this:—

Do you want some clothes made in London? You go to a first rate tailor and are elaborately measured and cross measured. The cloth is excellent, the price moderate, as compared with New York. You are requested to call and try them on in three days. You come to be tried on and find that the clothes are basted together and that the fit is merely a preliminary one; the basting is all ripped open and you are pinned up again. The tailor expresses no surprise that his work is badly done; he does not know that it is a wretched job.

You call, after a long interval, and try them on again. The sleeves are an inch too long, the collar fits as though it were made for a horse, the jacket is tight across the chest, and obviously intended for a fat man around the belt.

You ask if he did really take measurements in the first instance. The tailor complacently rips up all his seams again and once more proceeds to make chalk marks all over you and insert a number of pins.

You are inclined to use profane language, but curiosity masters your other feelings and you wonder how any establishment can succeed when so much time can be wasted over one suit of clothes.

You return for another "try on" in three more days, and the tailor is made to see that the coat pinches under the arm pit, that the back is full of wrinkles, that you would be ashamed to show yourself in such a garment.

Once more he proposes to rip you up, chalk you over and riddle you with pins. This time you give the matter up as a bad job; you cannot afford to waste any more time in this manner. An average man of letters could earn \$100 in the time that you are wasting over an English suit of clothes.

So you bundle the ill-fitting things into your trunk, wear them once or twice aboard ship in order to evade the New York customs and then given them away to some poor relation as soon as you can conveniently do so.

This is no isolated case. I ask my English friends on the subject and they answer me that all tailors in London are pretty much the same. They do not know how to take measurements, and if they did they would have to unlearn it because there is a trade union feeling among that fraternity to the effect that

it is good for them to make customers come three or four times to be tried on.

The American tailor cuts accurately because he is accustomed to good tools. The English tailor still works by rule of thumb and is consequently losing a valuable trade.

In Germany I find the tailors cut perfectly because they are accustomed to exact measurement. I have been to tailors in Berlin and have had them make me a suit of perfectly fitting clothes in thirty-six hours. I venture to say that a second rate German tailor will make in thirty-six hours a better fitting suit of clothes than a London tailor in thirty-six days. The price will be about the same, and as to the "style," the German tailor will turn you out a suit quite as "English" as any Bond Street "butter-finger."

For my part, after an experience of many years with tailors in New York, London and Berlin I have come to the melancholy conclusion that the London tailor is hopeless, excepting to the man who finds pleasure in being pinned, tipped and chalked at short intervals, yet interminably. To the American coming abroad I offer this warning—steer clear of the London tailor; get your clothes in Hamburg, Bremen or Berlin.

What are we to conclude from all that? Did any one of us ever discover in London, big a city as it is, such a tailor as Mr. Poultny Bigelow's unhappy fate betrayed him into patronizing? Why, even here in Yokohama one can walk into Messrs. Lane, Crawford and Company and find a tailor who, without pretending for one moment to be in the same flight with the Bond Street artists, will nevertheless make an excellent suit of clothes after one trial fitting. The thing is certain. Moreover, all Japanese coming from Europe bring with them London clothes, and very stylish they look. Is Mr. Poultny Bigelow strictly accurate, and where may one see these wonderful garments of Bremen, Hamburg and Berlin?

Then he goes on to attack British railways, British steamers and British hotels. What he says is too good to be summarized. We quote it in full:—

Here let us note another British specialty—railway service. England has to-day the most expensive, the slowest and the dirtiest railway service of any civilized power in the whole world. In every respect the United States are superior to her—comparing like with like—but what is more notable, in Germany and France railway travel is cleaner, more speedy and cheaper.

No week passes that I do not run out from London for country air, and whenever I find a train that reaches its destination on time I make a note of it as a strange thing. There are one or two trains that run fairly fast, according to British notions, and are tolerably good, owing to a faint degree of competition, but in the majority of cases the Englishman is satisfied to travel twenty-five miles an hour in dirty carriages which are not heated in winter and which are habitually late in starting and arriving.

And as to overcrowding, I have frequently found myself in railway carriages wherein passengers have had to stand up all the way after having paid their fares.

So far as my experience goes, I can travel with more speed and comfort in a German third-class carriage from Berlin to any big town like Hamburg, Frankfurt, or Cologne than in a first-class carriage in England, and it will cost me about one-fifth of the English price.

Turn now to steamships, and what do we see in this country that has been the "ruler of the waves?"

There is hardly a British steamer carrying passengers around the coast or across the channel that would not be, in the United States, regarded as unfit for decent people. In many cases such a thing as a bathroom is unknown, pillows are not provided, not even sheets, let alone private cabins. The passengers are expected to sleep on the benches around the after cabin, over the screw, and to feed on the sort of stuff that would be scouted by third-class passengers on an Atlantic liner.

Perhaps I hear you say that it is rough because it is very cheap. On the contrary, it is very dear, twice as dear as with us.

This sort of roughing it one is prepared for when seeking passage in out of the way parts of the Caribbean Sea, or in the Malay Archipelago, or the Levantine Islands. But here I am referring to the regular boats of the best English companies running from London, Southampton, etc., to the most frequented Continental resorts. Such boats in England are about fifty years behind corresponding craft in the United States.

When it comes to Atlantic travel, the Englishman appears as a diminishing quantity as compared to Germany, whose steamers are not only as fast and as big, but in most cases much more comfortable. What is true of the Atlantic is infinitely more true of the service to Africa, Australia and the Far East. German lines are steadily pushing the English to one side, and for very good reasons. Subsidy does not make good steamship lines. On the contrary, it is apt to make them indifferent to wholesome competition. The trouble with English lines to-day is that they are managed in the spirit which prevailed fifty years ago. The British steamers going to the Cape give such bad food that no one who has tried them once wants to do so again. Out to China no one cares to go on a British steamer who has ever traveled by a German, French or Japanese one. The German studies the needs of his passengers, the Briton is indifferent. The P. & O., a heavily subsidized British line to the Far East, charges six-pence (twelve cents) for a drink of lemonade. The German steamers pass lemonade around as we do ice water. The British ships afford no laundry on a journey lasting five or six weeks; the German line has an excellent Chinese laundry on each ship so that in the tropics all can wear suitable garments. There are dozens of minor items in which the Briton fails to meet the requirements of modern times. Suffice it to say at this moment that the Englishman wastes his time in inveighing against German and American competition. He has only himself to blame—he is doing badly what other countries are doing well.

Nowadays a fairly large item of national revenue is represented by the thousands of strangers who visit a country out of curiosity, or for the education of their children, for health, or for pleasure. The tide at one time set strongly in the direction of England, for obvious reasons. But what has England done to encourage this movement? Worse than nothing.

The English hotels are a byword throughout the world for badness and dearthness. The sweet little inns which tempt the artist and the photographer from the outside prove on nearer acquaintance little more than a drinking shop were the pedestrian or the cyclist may find, if he is lucky, some badly cooked food, a poor bed, and the attendance of some gin-soaked girl who resents being called away from the bar to serve customers who do not make beer or whisky the main staple of their diet.

When you rise to hotels larger than the little wayside inns, you find as a rule German waiters, a tawdry look about the dining room, and a proprietor far too lordly to concern himself with the comfort of his guests. His existence is made manifest only when it comes to pay the bill. Then you find that throughout the hotel system of England, whether you go to a country inn or a noted hotel, whether to the simplest lodging or the most gaudy of London caravansaries, the price will rule about the same. The proprietor does not charge you what the thing is worth, but he seeks to get as much out of you as he possibly can without being summoned before a magistrate. I have sampled a large number of hotels in my time—even in Greece—but for barefaced dishonesty in the making of bills commend me to the bluff British landlord. After charging twice what his food and rooms are worth he tacks on a further charge for service, another for lights, another for bath, another for fire. In short, my experience of country inns in England—and I can speak with some authority—is that I pay as much per diem at a shabby little country inn of England, where the food is poor and ill-cooked, the attendance inferior and the beds poor, as I would at a good hotel in such towns as Springfield, Mass., or the very best in Switzerland or Germany. Indeed, it must have struck the average American that the incomparable Baedeker hardly ever finds it possible to recommend an English hotel.

There must be some truth in it all, but how much?

FOOTBALL.

An Association game was played on Friday between a local team and one from the *Albion*. There was a strong south-westerly wind, which spoilt all combination and the game resulted in a draw, each side scoring one goal at the Settlement end while playing with the wind. Yokohama appeared to have a little bit the better of the game and pressed all the time whilst playing with the wind. In the second half, playing against the wind, Yokohama nearly scored on two or three occasions. The forwards put in some good combination. The local team was: Goal, Powys; Backs, Allcock, E. W. Kilby, Half-backs; Fifth, White, Mason; Forwards, Fradgley, J. E. Moss, Strone, H. Kilby, and L. le Marchand.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In last month's Summary we gave a short account of a new educational magazine called the *Kyōiku-kai* (the World of Education). From that publication we now proceed to extract the substance of an article written by Mr. Ozaki Yukio entitled *Shōhiteki Kokumin* (A Spending Nation). When the producers are largely in excess of the spenders, says Mr. Ozaki, a country grows rich rapidly. What makes a nation poor is the presence of an excessive number of spenders as compared with producers. In Japan the majority of those who have received a fairly good education are nothing more than spenders. Many attempts to turn out producers by means of education have from one cause or another failed. The Sapporo Agricultural College was established with the object of supplying a new class of farmers for the Hokkaidō. But it is a fact that most of the graduates of that school are spending their lives in other occupations than the one for which they were specially trained. These graduates are to be found as teachers of English in schools, as newspaper writers, as ordinary government officials, as politicians stumping the country in the interests of some party. Take another subject—Law. Every year some thousand students graduate at the five great Law Schools of Tōkyō. What use is there in the country for so many specialists? The number of judges, barristers and public procurators for which there is employment does not exceed 200 a year. What becomes of the rest? After wasting years in preparing themselves for a profession, they are forced at the age of thirty or thereabouts in many cases to abandon it and earn their bread in some other way. This state of things throws a whole crowd of idle malcontents on the country. These men are not simply non-producers and spenders, they are loafers. They have never been accustomed to undertake any arduous task. There are four causes of this condition of affairs; which may be briefly stated as (1) The influence of Chinese learning. (2) The habits begotten by feudalism which still remain. (3) The worship of officialdom and the contempt for the callings of ordinary citizens. (4) Lack of ambition and enterprise and general narrowness of view. (1) It is the teaching of China's greatest sages that physical exertion and labour are undignified and only to be undertaken by the inferior orders of society. Such sayings as *Tajin* (大人) *wa kokoro wo rō shi*; *shōjin* (小入) *wa chikara wo rō su* teach that mental effort is in every way superior to bodily exertion. This doctrine multiplies the number of scholarly idlers the country has to feed. (2) In feudal times the province of the *samurai* was to fight and spend. He was never expected to produce anything.* He regarded all producers as beneath him, as people who were no better than slaves. The farmers, traders and artisans, on the other hand, looked upon the *samurai* as belonging to a class whose special privilege it was to be mere spenders. (3) From the above causes there grew up a settled conviction that officials are, as a class, superior to all other citizens. Mr. Fukuzawa spent his whole life in combating this notion, and, in order to exalt ordinary vocations to the rank of government employ he always counselled the graduates of the Keiōgijuku not to enter government service. He would have been highly gratified had the majority of his students figured as producers, but they have not done so. Eight or nine-tenths of the graduates of the great Mita school will be found in great banks and companies, or in some other non-productive line of life. Though they have avoided government employ, they have selected occupations that very much resemble the callings of officials. So that it is correct to say that there has been no general

departure from the principle that to become a spender rather than a producer is the great aim of life. We are then, as indicated in the title of this article, a "nation of spenders." Hence it is that we are so behind the great Western Powers. Our use of all the modern conveniences with which the country is supplied is mostly connected with spending rather than producing. Our railways are regarded as designed to suit the convenience of passengers rather than to convey products from place to place. Our telegraphs and telephones are more used for sending messages to restaurants and tea-houses and for a variety of pleasure arrangements than for business communications. Under these circumstances how is it possible for the country to become rich? In the Bakufu days there was at one time a tendency to overcrowd the towns and to leave the country sparsely populated. The Tokugawa Shōguns saw the danger of this and took steps for stopping it. The imparting of new ideas on this subject to the minds of the rising generation is work that school-teachers must perform. With the exception of industrial, commercial and other business schools, the instruction imparted is quite unsuitable, that is, ill-adapted to the wants of the nation at the present time. General teaching should aim at preparing students for practical work in life. In Europe and America it is as a rule only young men whose parents have money that are given a high-class education. All others are content to graduate at middle schools and take to business. Here the opposite is the case. The students who graduate at our High Schools and pass into the Universities are mostly the sons of poor parents. The general feeling in this country is that high class education is not so necessary for those who have money as for those who are without it. So among the students at our chief institutions the sons of the rich and the influential make a very small minority. Speaking of learning generally, it may be said to be of two classes, academic, or that which is imparted in schools, and non-academic, or that which is learnt outside the school, usually after the school course is finished. Young men who have capital can afford to rely on the school only for their teaching, but in the case of students who have no property and who have to earn a living, if they abandon study when they graduate, their case becomes hopeless. As things are now the student's one supreme object is to pass his examinations and get his degree. He does not study from love of learning, but only to enable him to get a degree. (*Nihonjin wa gakumon wo konomu ni arazu; gakumon no kurai to sotsugyō shōsho wo uru wo konomu mono nari*). If a man is fond of learning he will study, school or no school. It is a mistake to think that you must have a school in order to manufacture students. Students are born and not manufactured. . . . Educationally I am convinced that we are on the wrong track. We need a radical change in our system. The intellect of the nation should be directed into productive channels and not be allowed to run to waste as for the most part it is now doing. The practice of allowing impecunious students to spend more than half their lives in studies the greater part of which have no bearing on wealth-producing occupations is one which well-informed men should discourage as much as possible. The state of things which I have sketched constitutes a most serious hindrance to national progress.

The *Nippon Shimbun* in an article entitled *Sōjuku, Sōrō mondai* (The question of the early maturity and early decay of Japanese) says in effect: We do not regard this question as by any means settled and are desirous of collecting and publishing various opinions on the subject. It is undoubtedly true that a great many competent judges have already declared that Japanese do certainly develop very early and that there is corresponding rapid decay of power, physical and mental, and remedial measures have been proposed. But the fact must be noted that there are those who affirm that this theory is quite baseless. Among them stands Count Okuma, who for many years has held that neither men nor women in Japan differ in the matter of physical or mental development from Occidentals. The early development and early decay theory he unequivocally rejects. There are others who

have quoted numerous instances of men retaining their vigour of body and mind to old age, but these of course may be exceptions, and the general opinion at present seems to be that, though the Japanese are not on a level with Koreans and Red Indians in the matter of early development and early decay, they differ very essentially from normal Europeans and Americans in that particular. The truth seems to be that up to the age of 20 the Japanese lad develops much more rapidly than Europeans of the same age, but that when over the age of 30 development is infinitely slower than it is with them. We have a proverb which says, *Tō no shindō; nijū no saishi; nijū-go yori wa tada no hito* ("At the age of 10 a child that is god-like in intelligence; at the age of 20 a clever man; beyond 25 an ordinary man.") This indicates steady decline. The saying, say some, states a truth which however unwelcome can not be altogether ignored. What is the root of the evil?—for evil it is deemed to be. Is it a race characteristic or has it been caused by accidental and temporary circumstances? We take the position, concludes the *Nippon*, that the question remains undetermined and we have already invited the fullest expression of opinion thereon. We shall publish later on the results of our inquiry.

The *Yomiuri Shimbun* a short time ago published a letter from its Hokkaidō correspondent which dwelt on the fact that part of the Japanese empire has been more occidentalised than any other locality. All over the island of Yezo, says this correspondent, are to be seen houses either wholly or partly foreign-built. Glass windows are common everywhere; a town like Nemuro appears from the harbour to be quite a foreign town. Carts are largely used, foreign agricultural implements and foreign food and cooking are to be observed in the most out-of-the-way places. Foreign fruit, coffee, milk, soup, and the like, are to be had almost anywhere. It was one of the great desires of General Capron nearly thirty years ago to see the Hokkaidō thoroughly occidentalised, and though this has not yet been accomplished, the people of Yezo have certainly assimilated more western ways and notions than the inhabitants of the more southern regions.

In an article on "Middle School Education," the *Nichi Nichi Shimbun* points out the serious defects of the system of education followed in this country at the present time. Youths of any ambition, says the *Nichi Nichi*, are not satisfied with the education they obtain in the Middle Schools. They aim at passing into High Schools en route to one of the Universities. What is required is that the Middle Schools should be converted into efficient finishing schools for the majority of pupils. It is necessary that the instruction imparted in these schools should have one main object and that the practice of teaching a number of superfluous subjects should be discontinued and the attention of students be centred on those branches of knowledge a mastery of which is essential to success in after-life. The supply of teachers for Middle Schools is very deficient. According to statistics published in December, 1899, the total number of Middle Schools in Japan was 168, with 61,247 pupils. The duly accredited teachers for these schools only numbered 1,430. Their assistants numbered 1,130. Throughout the whole country there were only 21 foreigners teaching in Middle Schools. Every Middle School ought to have at least two foreign teachers and the number of Japanese instructors needs to be multiplied by four.

In the nine thousandth number of the *Nichi Nichi Shimbun* (p. 10) appears an article by Dr. Ariga entitled *Gwaikōshi oyobi sono kenkyūhō* ("The History of Diplomacy and Methods of Studying it"), of which the following is the substance. For many years past there have been clear indications that the Far East is about to become the centre of diplomacy and I have felt that as a nation we are far behind Europeans in a knowledge of the influences which control the actions of the great Powers. Steps have been taken to remedy this defect. Some years ago I published a work called the *Gwaikōshi* ("History of Diplo-

* Before the time of Iyeyasu the canons of polite society in Japan forbade a *samurai* to engage in agricultural labour. Though the retainers of Tokugawa Hirotsada, Iyeyasu's father, were so ill-provided for that they had to do a little farming on the sly, in order to keep body and soul together; the etiquette of the time condemned the practice even under such circumstances.—(WRITER OF SUMMARY).

macy") and later I started a magazine known as the *Gwaikō jihō*. At the Gakushūin, the Waseda Semmon Gakkō and the Keiōgijuku this subject has been included in the school curricula and I am employed as lecturer at these institutions. The Imperial University, with a view of establishing a lectureship on this branch of politics later on, has sent a teacher to Europe for the purpose of study. In the study of the history of diplomacy there are two main objects. (1) In a great many cases it is possible to determine pretty accurately what is likely to take place under a given set of circumstances by considering what has already occurred under similar conditions. Diplomacy, like naval and military tactics, can only be studied thoroughly by a careful examination of what has actually taken place in the past. In some respects the future may differ from the past, but the points of similarity between what has happened and what will happen in both war and diplomacy will always be largely in excess of the points of difference. To take a few modern instances, the position that China holds vis-à-vis the great Western Powers resembles that held by Turkey for a very long time. The attitude of Japan and Russia in reference to Korea resembles that of the French and the English at one time in reference to Morocco. Had our representative in Peking at the time of the international councils held there been better versed in the history of the negotiations at Constantinople bearing on the future of Turkey, he would have insisted on the question of the future of Manchuria being discussed by the conference. (2) The other main object of this study is to make us acquainted with the actual relations of the various Powers to each other and the complicated conditions which influence these relations. In order to obtain a fair idea of this subject, it is necessary to begin with the Vienna Conference and to pay close attention to the great political events and changes of the past thirty years. But the lack of suitable text-books for this subject is greatly felt in this country, and even in Europe the tangled thread of diplomacy has to be traced through a mass of irrelevant material, that is to say, diplomacy is mixed up with general history to such an extent as to be almost inseparable from it. A good deal of information on the subject is, however, to be obtained by studying the lives of great diplomats like Bismarck, Cavour, Metternich, and Palmerston. Among these what diplomats have penned themselves in reference to the art and subtleties of diplomacy is most instructive. The self-revelations of Bismarck, Crispien and Hohenlohe tell us more about the secrets of diplomacy than any ordinary historian can tell. What we very much need at the present time is to establish a connection with some reliable European source of information. I have attempted to do this in order to obtain matter for publication and discussion in my magazine. But it is a very costly business and the association which sends me information being in the pay of a certain Government, is obliged to use great discrimination in disclosing facts. The magazines of each country are necessarily more or less biased and must be read with caution. The real facts of a case can often only be known by a comparison of several different accounts. By extensive reading one can construct one's own history. The study is a fascinating one, but I am more and more conscious of its comprehensiveness, and I begin to feel that I must go on till I am sixty years of age in order to get a fair knowledge of the ins and outs of modern diplomacy.

* * *

Under the title of "Marquis Itō's Foreign Travels" the *Keisei*, of which Mr. Matsumura Kaisei is the editor, publishes an article of which the following is the gist. For a statesman of the calibre of Marquis Itō to take a journey to Europe is an event of great importance. This is the tenth time that Marquis Itō has journeyed in foreign countries. (1) In 1863 in company with Inoue Kaoru, Yamao Yōzō, Inoue Masaru and Endo Kinsuke he stole away from the country contrary to the laws of the land, but consequent on the stir caused by the Shimonozeki affair speedily returned to Japan. (2) In 1870, under orders from

the Government, he went to America, accompanied by Yoshikawa Akimasa, Fukuchi Gen-ichirō, and others, and brought back with him a large amount of information relating to the gold standard currency system. (3) In 1871 he went to Europe and America under Iwakura and remained abroad two years. (4) In 1882, in company with a number of well-known men, among whom were Saionji Kinmochi, Itō Myōji, Miyoshi Taizō and Prince Iwakura, he went to Europe in order to examine the constitutions of various countries with a view of compiling the Japanese Constitution. (5) In 1885 he went to Tientsin, accompanied by Itō Myōji and Inoue Ki for negotiation with the Chinese. (6) In 1888 he went to Vladivostok and Korea. (7) In 1895 he went to China, Korea and Formosa. (8) In 1897 he attended Queen Victoria's Diamond Jubilee in London and travelled in Europe and America. (9) In 1898 he went to China and Korea. (10) This journey of 1901 the world thinks will be his last trip to foreign lands. Being over sixty years of age, travelling can no longer afford much pleasure to the Marquis. There are all sorts of reports about the object of his journey. Some say it is for the purpose of enabling Japanese to borrow money abroad, others that it is connected with the settling of the Far Eastern question, and others again that health is the chief object. But the present writer is strongly of opinion that this journey, like so many that have preceded it, is to be attributed to a certain restlessness of mind that has always characterised Marquis Itō. Marquis Itō is a man who has no relish whatever for an idle existence. Because occasionally he has spent time in verse-making, playing chess and drinking, some people fancy he has a taste for these things, but it is not so. These things bore him, and in order to get away from them when not in office it has been his wont to go abroad. (*Hito-tabi seiji wo toranu to temochi-busata (ennui) de shikata naki yori, yamu wo yasu tabi too kवादतलरि.*) In these foreign tours he finds the diversion that his mind seems to need when wearied with the stress of office. In his old age the tendency in his nature which craves for activity and excitement is more imperative than ever. During the past rule has been for him to start off abroad on the fall of his Cabinet. After the fall of the second Itō Cabinet he went to England; after the fall of the third he went to China and Korea, and now after the fall of the fourth he has gone to Europe. On arriving back from these foreign tours he has constantly stepped into power and office again. When he returned from Tientsin, though it was known that his negotiations with Li Hung-chang had practically failed, he was asked to form a Cabinet and did so. In two more recent cases the same kind of thing has happened. And now while he is going the round of the capitals of Europe, he anticipates the fall of the Katsura Ministry and a further development of Constitutional Government in this country. But there is another reason for his wishing to get away. He was doubtless quite sick of trying to control the Seiyū-kai. The document containing that fine enunciation of principles, with which the party set out has been rendered so much waste-paper by the grovelling natures of many of its members. "Give me office or give me money" was the demand which reached Marquis Itō's ears so often that he could hear it no longer, and took his departure, leaving the Katsura Ministry to purchase the votes of members at will. Will the present Ministry succeed in bringing the Seiyū-kai into line, or will it divide the party to such an extent as to threaten its existence? Or will the Cabinet by its action cause an *impasse*, which will end in the recall of Marquis Itō by the Emperor and his resumption of the reins of state? These are questions which will be answered in the near future.

* * *

In the *Eiseikai Zasshi*, Dr. Kanasugi Eigorō publishes a long article on the evils resulting from marriage between blood relations in Japan. He has gone into an elaborate investigation of this question and he guarantees the correctness of the statistics he gives. Out of the 493 cases of mutes he tested 303 were males and 190 females.

Among the 493 cases 363 were born deaf and dumb and 130 became deaf and dumb after birth. Among the above cases there were 31 in which muteness was in the family ancestry, but out of these 31 cases no less than 10 could be traced to consanguineous marriages in former times. Out of the 493 cases, 117 were proved to be the result of consanguineous marriages, that is, a percentage of 23.8. This agrees with Mygnid's percentage. Moos gives 32.5 and Chazarein 30.3, but on the other hand Lent's percentage is only 14.9 and Lacassague's 15.8. So that Japan stands high in the list. My investigations go to prove, says Dr. Kanasugi, that Meniere's theory is correct. There are very few mutes begotten of mutes. The large majority are the offspring of thoroughly normal and healthy parents who have contracted consanguineous marriages. The rule seems to be that the closer the blood relationship the greater are the evil effects produced. Since, then science has clearly established the fact that great evils result from consanguineous marriages, in my opinion, says Dr. Kanasugi, Art. 769 of our Civil Code ought to be altered in the sense of forbidding marriages between persons who occupy the fourth degree of blood relationship to each other (that is, cousins should be interdicted from marrying).

* * *

Dr. Masujima in No. 18 of the *Register* discusses the question of foreign ownership of Railway Shares in the following manner. It is argued by some that because foreigners are not allowed to become landowners in Japan they cannot legally and safely hold railway shares, since the company that owns a railway owns the land on which the line runs. But this method of stating the case is misleading. The chief object of a railway company is the making of money by railway traffic. The chief value of a railway is not the market value of the land over which the line passes, but the value of the traffic that it can command. A railway business is a going concern, and if it has to stop, shareholders must lose heavily in any case. Now in a business of this kind the rights of individual shareholders consist in being authorized to claim their share of the profits. The railways are owned by juridical persons who are duly registered as such. No individual shareholders, whether Japanese or foreigners, can do as they please with the property of the company. The rights of individual shareholders only extend to the share of the profits of the company. If a company decides to dissolve and dispose of its property the law does not allow this to be done in any fashion the shareholders may determine, but controls the liquidation, and no shareholders are allowed to have a voice in the final adjustment of affairs. When its accounts have been finally made up the company's property is sold and its debts paid off, and remaining profits, if any, are impartially divided among the shareholders. Where then does the land owning and land selling for the benefit of individual shareholders, foreign or Japanese, come in? The answer is, nowhere. The only persons who have rights over the property are juridical persons and there is no law against their being partly Japanese and partly foreign, or wholly foreign for that matter. The land is held for the purpose of carrying on railway business and its chief value is confined to the purpose for which it has been purchased and put into shape. Though it undoubtedly constitutes the most valuable asset of a railway company, in case of the failure of a company or of its dissolution from any cause, the law will superintend the disposal of its property and will see to it that all shareholders are treated alike, irrespective of nationality.

* * *

In the December number of the *Taiyō* appears an article by Mr. Kondō Rempei, Director of the Yūsen Kaisha, on the introduction of foreign capital into Japan, the purport of which we give below:—There is a great deal of agitation in favour of introducing foreign capital that is to be deprecated, because it comes from speculators who want to run up the shares of their various concerns. Then there are those who argue that it is the duty of the Government to guarantee foreign loans.

How could the Government with safety undertake any such thing? If it once set out on business of this kind there would be no end to the enterprises it would be asked to further. In each case the most elaborate and costly investigations would have to be made, and after all there would be no guarantee against corruption and fraud of every kind. I see great difficulties connected with the introduction of foreign capital which I will now proceed to state. (1) Foreigners are very ignorant of the state of our finances and few steps are taken to dissipate this ignorance. Then every now and again anti-foreign feeling displays itself in this country. This does not make for the introduction of foreign capital. Then we have politicians like the late Minister of Finance (Viscount Watanabe) who because their advice is not followed in the matter of financial adjustment represent the country as on the verge of ruin. The opinions of such pessimists are reported to our detriment in Europe and America. Foreign journals should be supplied with reliable information on the actual state of business in this country and on our financial prospects. This will take time, but there is no other sure way of removing foreign prejudice. (2) According to the present laws foreigners are certainly not encouraged to invest capital in Japan. Why is the right of land-ownership not at once conceded? What is there to be afraid of? If foreigners buy land to a considerable extent even, they can not carry it away and they will hold it subject to Japanese law. Why deny a right to foreigners here that is granted to aliens in Europe and America? The fact is that there is still a deal of anti-foreign feeling in the mind of the nation. Take the case of the great Echigo Oil Company. That without waiting for land-ownership a foreign company should be found trustful enough to lay out to million yen in the development of a business, should be regarded by us with no small gratification. Yet we hear on all sides nothing but petty, jealous comments on the undertaking, and many seem to regard it as an outrageous attempt to rob the country of profits which ought to be shared by Japanese exclusively. As long as this extreme insularism is harboured by the mass of the people, what is the use of clamouring in favour of introducing foreign capital? When foreigners encounter all this adverse sentiment, is it to be supposed that they will feel anxious to put their money into Japanese enterprises? If we want foreign help we must give foreigners a due amount of representation. They should be invited to take part in the management of business companies. The mining rights of foreigners are far too confined and needlessly irksome. If we expect the co-operation of foreigners we must show that we thoroughly trust them. It is said that Japan is a law-governed country because we have good codes. But what about the administrators of these codes? Are they free from reproach? The Kobe Water-pipe case and the Russo-Chinese Bank *versus* the 130th National Bank case have attracted a large amount of attention among foreigners and have produced a bad impression. Foreign confidence in the impartial administration of the law can only be won by the Government's exercising greater care when cases concerning foreigners come up for settlement. Even were the laws all so altered as to give foreigners all the rights they can justly claim, so long as the administration of these laws is open to charges of partiality foreign confidence is not to be won. (3) Japanese commercial morality compared with that of Europe and America makes little progress. It is certainly a fact that the foreign merchants who reside in Japan have no confidence in the ordinary run of Japanese business men, and in the opinion of these merchants our traders fall beneath the Chinese in trustworthiness. Whether they are right or wrong I can't say, but while this want of confidence exists, it is idle to be talking about the introduction of foreign capital. What is wanted is to prepare the ground for the employment of foreign capital by removing the permanent, chief obstacles to its introduction. To rely on the Government for influencing foreigners in favour of private enterprises is quite useless. If a business has a solid basis and can give to foreigners the satisfaction

they require, money will be forthcoming, as it has been for the Murai Brothers tobacco trade. In conclusion it is important to observe that the country would not be benefited in any way by an excessive influx of foreign capital, out of proportion to the real wants of our business enterprises. This would only lead to ruinous speculation. For solid paying enterprises money is required, and will be forthcoming if the above-named conditions are complied with. It is not to our interest that the country should be flooded with capital for which no profitable investment can be found. This would only lead to high prices, small profits and consequent distress.

"THE BALLOON."

There are doubtless people who will say that "The Balloon" (though the production of such persons as Mr. J. H. Darnley and Mr. G. Manville Penn) is destitute of anything in the form of a plot. It is a mistake to think so. There is a plot distinctly visible to the unaided eye; there is some talk of a balloon; and at a certain stage of the play an object of that kind is observable, passing across the middle distance of the back-cloth. Put briefly, we have a doctor, on the verge of getting married; an American widow with whom he seems to have, so to speak, "committed" himself while on while on a visit to Rome; there is a dog, and there is the aunt of the young lady whom the doctor is about to wed. Then we have the doctor prescribing for the aunt, and a genial young friend of his invading his consulting room and taking thence some strychnine with which to kill the dog,—to cure whose ailment the doctor's services have been invoked. The death of the dog, and the frenzied lamentations of its fair owner are followed by the doctor's conviction that he has inadvertently murdered the aunt of his sweetheart, his flight in a balloon, his reported death, his return, explanations and embraces. The balloon, which gives the piece its name, bulks very slightly in the business and might just as well have been an automobile or an old scow with a suitable change in destination; and the most prominent character in the piece (next to the doctor) is the lady whom he met at Rome, who has nothing to do with the balloon, or the dog, or the strychnine, and merely worries the young man with some letters in which he has apparently been indiscreet enough to address her as "Darling Kittens" and which she forgetfully leaves about for other people to see. But there is no doubt about the existence of a plot: the murder of a dog and the deeply rooted conviction of a medical practitioner that the murder was committed by him and that the victim was not a dog but an old woman, will strike most persons as a group of incidents so absolutely original and yet so artistically natural that they will find it difficult to think of a plot without a dog or an old woman.

The story opens with a visit to the house at Dover of Dr. Glynn by his betrothed, Grace Wentworth, and her aunt Mrs. Fitzjohn, for the latter of whom (as usual after a dinner party) he has to make up a dose of comparatively harmless medicine. The doctor places on a table the bottle from which this draught is taken, and the ladies leave after an incidental reference to the balloon. Then Captain Cameron, who proposes to go up in the balloon, comes along and, being an old friend of the doctor, is told all about the Rome affair, describing in turn his own worship of a lady, his attentions to whom is somewhat interfered with by her faithful St. Bernard, *Fifine*. The doctor is called away and meantime Miss Vere, the owner of *Fifine*, arrives bringing medical assistance for her pet and, believing Cameron to be Dr. Glynn, demanding the former's attendance at once. Cameron sees a chance of getting rid of his enemy and hopefully takes up the bottle from which Mrs. Fitzjohn has been dosed, but, finding that useless for his purpose, places it on the shelf among the other bottles and seizes upon a bottle of strychnine, from which he fills a small phial for the benefit of *Fifine* and, putting the bottle where Mrs. Fitzjohn had been, starts to that amiable creature's assistance. Glynn returns and Mrs.

Rippendale, the widow from Rome, now comes on the scene armed with a "photo" and some letters tied with ribbon. "Your letters," she says:—"My darling Kittens, pretty pet name isn't it? And when we are made one—" Glynn says, "Bah." But she reads more, where he has stated that as his wife "sorrow shall never mark a line on that darling brow," and she adds that she has still more and hints that there will be "loud laughter in Court in which the Court joined." She also calls him her "Dicky," an appellation which he coldly repudiates and announces his approaching marriage. An awkward situation arises when Grace Wentworth arrives, but Glynn gets her away without any revelation having been made. Fitzjohn is now announced, and at the mention of his name Mrs. Rippendale betrays some agitation, finally taking refuge in an adjoining room. Fitzjohn, who is impecunious and thirsty, turning out an empty pocket when asked to show his tongue, "touches" the doctor for a loan, and during Glynn's temporary absence picks up Mrs. Rippendale's packet of letters, dropped by her in her hasty retirement. "Fitz, my boy," he remarks, when he has read two or three fervid sentences, "you can now give the doctor fits." He departs; Mrs. Rippendale reappears and departs, and Cameron having slain *Fifine*, arrives and intimates that it was "Liq. Strych.; one kick and the dog was gone." Glynn comes in, a messenger says he is wanted at Mrs. Fitzjohn's; to obtain more magnesia he takes up the bottle placed by Cameron where the magnesia had been, and reads the label "Liq. Strych." just as Miss Vere comes in and loudly accuses "Dr. Glynn," that is Cameron, of having poisoned "her"—*Fifine*. Glynn thinks of the draught he gave the old lady, connects it, the bottle of poison and Miss Vere's accusation, and very naturally says "Good Heaven!" as most people would under such distressingly inconvenient circumstances. Subsequently he frets a good deal over the supposed death of Mrs. Fitzjohn, though that lady's volatile husband tries to cheer him up, whistling in a lively manner when informed by Glynn of the unfortunate occurrence, and advising him to do with this as with his other patients, bury her. Miss Vere comes in, Glynn flying from the room, and has a brisk talk with Fitz, who receives her, and finally shuts her up in a room. There is a very nice little scene between Glynn and Grace (who wants to know why he groans and suggests that it is because he is deceitful), and the latter in his temporary absence sees the "photo" left by Mrs. Rippendale and overlooked by Fitz; concludes that Glynn is "a monster of deception;" and then, hearing Miss Vere's wails to be let out, trots away to call her auntie, taking the imprisoned maiden's sunshade. But readers doubtless wish to get to the balloon, so we must merely allude to the arrival of Dr. Boyton who is to take charge of Glynn's practice during the honeymoon and to the means by which Fitz convinces that gentleman that the shrieks for release emanate from a lunatic. Capt. Cameron now comes on and speaks of his approaching balloon trip; Miss Vere escapes, and, as the stage directions have it, "screams off," on which Glynn, believing that she will spread the news of Mrs. Fitzjohn's death, and knowing nothing of the slaughter of *Fifine*, hurriedly departs in Cameron's balloon. There can be no mistake about it—the great object is seen soaring away at the back of the stage. Then the balloon is found at sea, a deflated wreck, and Glynn's death is assumed till that gentleman returns, bearing traces of having been badly knocked about, to the house from which he had so hastily fled. There is some very amusing business here and a policeman called by Miss Vere appears with a writ for Glynn for poisoning *Fifine*; Mrs. Fitzjohn arrives; Mrs. Rippendale is recognized by Fitz as his first wife; the misunderstanding about the murder of *Fifine* is explained; and Glynn's guiltlessness of Mrs. Fitzjohn's death fully established by that lady's presence; Cameron leads on a dog wherewith to placate Miss Vere, and all ends well.

The acting was good. First of all undoubtedly stands out Mrs. McWilliams, who was a splendid Mrs. Rippendale, having seldom, we should

imagine, been seen and heard to greater advantage. Though quietly she was effectively dressed, and her fine presence and distinct intonation, apart from the ease and grace of her acting, would alone have claimed the applause of the house. Miss Ross was a charming *Grace Wentworth*, and acquitted herself most admirably. *Miss Vere* had a very able exponent in Miss Andrews, who wore a beautiful dress and acted the part with much spirit. As *Mrs. Fitzjohn* Mrs. Rogers undertook a difficult role and filled it with the highest merit. *Dr. Glynn* was represented by Mr. H. J. Sharp, who acted with his usual care and achieved quite a success. Mr. E. C. Davis was a very entertaining *Captain Cameron* slaying *Fifine* with considerable aplomb, and keeping his balloon discriminatingly in the public eye; and of *Mr. Aubrey Fitzjohn* it seems hardly necessary to say more than that the part was taken by Mr. Brady. The latter was in his element, and his impersonation of the amusing old blackguard was vastly entertaining. There remain *Dr. Dayton*, Mr. Eddison who did what he had to do excellently; *David*, Mr. Skrimshire, who not only rendered the deaf old servant capably but also enjoyed the distinction of having an explanation made from the stage of how *David's* and his names were left out of the printed cast; and the *Policeman*, Mr. Waddilove, who was an effective representative of law and order.

The Band of H.M.S. *Albion* was present by permission of Admiral Grenfell, the Captain and the Officers of the ship and played very agreeably. In reference to the second performance we are asked to say that while it is a *ten-night* seats may be reserved in any part of the house for 2 yen at Messrs. Thwaites and Co.

We may not close without congratulating Messrs. E. Beart (Stage Manager) and C. F. McWilliams (Scenery and Properties Manager) on the success of their efforts, while also complimenting the artist who atoned for the sparseness of aerobatics in the play by spreading a lurid balloon with a green waist-band and a blushing sky on the front page of the programme.

The second performance of "the Balloon" did not attract such a large house as its manifold merits deserved. Perhaps the imminent departure of the American mail and the fact that there have been a perfect whirl of festivities, more or less of a private character certainly, during these past ten days had something to do with it; anyhow it is a pity that not more were present on Monday, for the performance went with a rousing swing that added greatly to the enjoyment of the evening. All the performers played up to the level of their best attainments, getting all the fun possible out of their respective parts, and the ladies thoroughly deserved the floral tributes that crossed the foot-lights at the close. Mr. Brady, we must reaffirm, has seldom been seen to better advantage; both in make-up and in characterization he eclipsed himself, while the *David* of Mr. Skrimshire was a most artistic achievement, and makes us long to see him in a more ambitious part.

AMERICAN TOPICS.

Strange to say there is quite an animated discussion going on in the United States, about the propriety of opening the saloons on Sunday. America is about the last country in the world where one would have expected such a proposition to find any favour. Yet it is undoubtedly finding favour. Here is a fair statement of the case formulated by the advocates of opening:—

District Attorney Jerome stated that demand bluntly and emphatically on the stump, basing it upon the ground that a man's appetite did not recognize the days of the week and that, if it was not wicked to take a drink on Monday, it was not wicked to do so on Sunday. Every man recognizes that doctrine in his own house. Men who have clubs recognize its force there. The argument has been made with telling effect among the voters of the tenement house districts that the reformers, in closing the saloons, wished to shut off from poor men a privilege of which they availed themselves in their clubs. The reformers were able to win this year largely because the opposition of their candidates to the enforcement

of the present excise law was so well known that the cry which Tammany tried to raise for "personal liberty" fell flat. Seth Low occupies practically the same ground as Jerome, although his statement of his position has been less emphatic and picturesque. These two men are reinforced by a large body of the leading clergymen, who have come to understand the evils worked under the cloak of the Raines Law. Their most conspicuous spokesman is Monsignor Doane, of the Catholic diocese of Newark, the brother of Bishop Doane, of the Episcopal diocese of Albany. Monsignor Doane advocates a law which shall permit the opening of the saloons on Sunday except during the hours of morning church service. He states that as his conviction, reached from years devoted to fighting drunkenness. He wants such a law supplemented by one which shall punish the selling of liquor at any time to an habitual drunkard or a man already under the influence of drink. This, he says, would enable the wives of drunkards to protect themselves against the menace the saloon holds for their husbands. He is reinforced by a writer in the *Tribune* who signs himself "A Son of the Puritans." These men represent the sentiment of the best citizenship of this city, which understands the evils flowing from secretly opened side doors on Sunday.

It must appear to thinking people that where these arguments fail is in tacitly assuming that the drinking saloon is a harmless institution on week-days. Many sensible folks are of the opinion that whatever is right on Saturday or Monday must be right also on Sunday, unless its practice on the latter day entails forcible or inevitable violence to the scruples of others. These reasoners, if they can be persuaded to believe that the drinking saloon is in itself a blameless institution, find no ground to forbid its being open on Sunday. But surely it is impossible to ignore the fact that indulgence in the use of alcohol is the curse of the world; that it not only destroys the morality of the individual but also checks the development of the human race, and that nine-tenths of all the crime perpetrated among all the nations are traceable to this cause? Laws can not make people moral but they can at least check the outward practice of immorality, and if in Anglo-Saxon countries there is happily one day in the week when men can not openly make brutes of themselves, would it not be a terrible misfortune to deliberately abandon that solitary saving clause?

Duties on personal baggage arriving by European steamers at New York amounted to \$120,774 in October, as against \$39,590 for October, 1900. Since March 1, 1901, when the new regulations went into effect, the collections have amounted to \$787,388, as against \$192,945 for the corresponding period in 1900.

The Municipal Art League of Chicago has entered upon a gigantic undertaking. It is nothing less than an effort in the first place to obtain a membership of 500,000, and in the next to raise \$1,000,000. This sum is to be expended in beautifying the city with statuary, with mural paintings in public buildings, artistic drinking fountains, sculpture placed in parks and at street intersections, improvements in parks and reserves, etc.

The total sales at the art galleries of the Pan-American exposition at Buffalo amounted to less than \$15,000 for twenty-seven pictures, a disappointing result considering the large number of pictures shown (600) and their high quality. The Buffalo Fine Arts academy bought six paintings, as follows: Frank W. Benson's "The Sisters," H. Siddons Mowbray's "The Lady in Black," Henry W. Ranger's "A Group of Oaks," Childre Hassam's "Gloucester," Edward Dufner's "In the Studio," and W. Elmer Schofield's "Autumn in Brittany."

Mr. Takagi, Japanese vice-consul at Portland, Oregon, is said to be manifesting deep interest in the promotion of closer trade relations between his country and the United States. For the purpose of setting his views before the business men of Portland he gave a banquet, at which representatives of the various commercial bodies of the city and prominent business men were present. Mr. yen.

Takagi delivered an address in which he advocated the establishment of a Portland banking house at Yokohama and the establishment of branch houses of Portland mercantile and manufacturing enterprises in the larger cities of Japan.

October was a "record breaker" in the building industry of the United States. Statistics furnished by the *Construction News* show that 6,328 permits, involving an expenditure of \$24,990,925, were taken out, as against 5,650, costing \$19,678,848, for the same period of last year, a gain of 678 structures and an increased expenditure of \$5,312,077. Eighteen municipalities show increases, varying from .003 per cent. in the case of Denver to 394 per cent. in that of Atlanta. Three cities show losses, to wit:—Chicago, Brooklyn and Pittsburgh, 25 per cent., 29 per cent. and 42 per cent. respectively. Pittsburgh's heavy loss is probably due to the fact that in October, 1900, the records of that city included one building, the value of which was \$1,500,000. In proportion to its size building operations in Pittsburgh show a greater gain than in any other city of the United States. Los Angeles, Memphis, Atlanta, Detroit, Cincinnati, St. Louis, Cleveland, Washington, D.C., St. Paul and Kansas City all tell of activity in building construction.

The relative growth in the exports of the great nations to Mexico is accurately measured by the following table prepared by the Treasury Bureau of Statistics, which shows the value of the export of the United States, United Kingdom, France, Germany and Spain to Mexico in each year from 1887 to the latest attainable date, in millions of dollars:—

Year.	United States.	United Kingdom.	France.	Germany.	Spain.
1887	7.9	5.8	7.6	1.1	1.3
1888	9.9	6.7	5.8	1.6	1.3
1889	11.5	7.9	10.8	3.5	1.6
1890	13.2	9.8	10.7	3.5	1.8
1891	14.9	9.5	8.8	3.4	1.5
1892	14.3	7.2	6.8	2.9	1.4
1893	19.6	6.1	5.4	2.9	1.3
1894	12.8	6.4	5.8	2.7	1.3
1895	15.0	8.1	7.5	4.0	1.5
1896	19.5	8.2	6.4	3.7	1.7
1897	23.4	8.4	5.1	4.3	1.5

According to the view of the Washington Post, anything like a general system of profit sharing is utterly impracticable. If all great industrial enterprises could be safely relied upon to yield a certain percentage of profit every year it might be practicable to divide it between the owners and their workmen. But that would not be the best plan. An increase of wages so as to make a fair division of profits between labour and capital would best meet the just demands of so happy a situation. If, as is always the case in a great manufacturing establishment, some men render service of exceptional value it were better to pay them accordingly than to hold out the hope of a gift. Let such men be their own bankers. But there is no absolute certainty of continuous success in any business. Hard times follow good times. Large profits are succeeded by small profits, and the latter dwindle until losses show up. Many a corporation has carried on a business for months, and even years, without making a cent, and that experience must, in the nature of things, be repeated. Every wage worker has a right to as high wages as he can get, and there his pecuniary claim ends. No man who is not bound and able to meet his share of losses has any right or reason to expect a share of profits. Only those who respond to assessments can be permitted to take dividends.

FIRE.

On the morning of the 21st instant at one o'clock, fire broke out in the theatre at Hamamatsu, and was not extinguished until 3 a.m., by which time forty houses had been destroyed. The loss is estimated at 15,000

THE ASIATIC SOCIETY OF JAPAN.

ANNUAL MEETING.

The annual meeting was held at the Parish Buildings, 54, Tsukiji, Tokyo, on Wednesday, Dec. 18th, at 4 p.m., Dr. D. C. Greene, President, being in the Chair.

The minutes of the previous meeting were taken as read.

The business of the annual meeting was first disposed of. The Secretary read the annual report.

REPORT OF THE COUNCIL.—SESSION, 1901.

There is little to record regarding the past session. Two general meetings were held during the year at which the following papers were read:—

Remmon Kiokwai, by Rev. A. Lloyd.

Remmon Kiokwai (Supplementary), Rev. D. C. Greene, D.D.

Translation of "Sumiyoshi Monogatari," by Harold Parlett, Esq.

Translation of "Saishi," Dagai, by R. J. Kirby, Esq.

Another translation from Dagai by Mr. Kirby and "Some Tales from the Uji Shin Monogatari," by Mr. S. Ballard were read at the last annual meeting. It is hoped that more papers will be received in 1902.

Eighteen new names have been added to the list of members and eleven members have resigned and three died. The Council express their deep regret at the death of the Rev. W. J. White, who for so many years took an active interest in the affairs of the Society.

The Treasurer's report was then presented.

THE HONORARY TREASURER IN ACCOUNT WITH THE ASIATIC SOCIETY OF JAPAN.—SESSION OF 1901.

Examined and compared with vouchers and found correct.

RICHARD J. KIRBY, Auditor.

LIBRARIAN'S REPORT.

For the year 1901.

The Sale of Transactions, during the year have amounted to 687.21 yen; during the last half of the year 1900 they amounted to only yen 166.83. The increasing demand is gratifying.

The Stock in hand is given on the sheet annexed. It is my duty to point out that the stock of some numbers has run very low. Of vol. 3 part i. we have only 25 copies left; of vol. 8, part i. only 14; of vol. 8, part ii. only 24.

The list of Exchanges remains very much the same as in previous years, and have I believe all been received; but I have no accurate record except for the few months that I have been in office.

Vol. 28 has been published and distributed: the first part of vol. 29 is rapidly approaching completion, and should be in the hands of members by the end of the year.

It has occurred to me that a quarterly Bibliographical Report of new books appearing in Japan, together with a short description in English of their contents, might be of considerable value to students of things Japanese both in this country and at home; and that the publication of such a Report would add very much to the value of the work done by the Society. As I have many dealings with Japanese publishers and booksellers, I think I can collect the material, and I shall be very glad to undertake it for the Society if the Council will authorize me to do so.

ARTHUR LLOYD.

Dec. 18, 1901.

COUNCIL FOR 1901-02.

The following gentlemen were elected Members of the Council for the ensuing year:—

Rev. D. C. Greene, D.D., President
Rev. A. Lloyd, Vice-President and Librarian.
J. F. Lowder, Esq., Vice-President (Yokohama).

Arthur Hyde Lay, Esq., Corresponding Secretary.

Rev. E. S. Booth, Corresponding Secretary (Yokohama).

Harold G. Parlett, Esq., Treasurer.

Members of Council:—B. H. Chamberlain, Esq., R. S. Miller, Esq., R. Masujima, Esq., R. J. Kirby, Esq., Professor C. S. Griffin, Professor E. H. Vickers, Professor E. W. Clement, Dr. D. Macdonald, Rev. A. F. King, Professor J. T. Swift.

AN INTERESTING PAPER.

Dr. GREENE, after asking Prof. Clement to take the chair, read a portion of a translation of the *Hyo-chu-ori-taka-shiba-no-ki*, prepared for the Society by the Rev. Geo. Wm. Knox, D.D., formerly one of its Vice-Presidents, but at present Professor of Comparative Religion in Union Theological Seminary, New York City. The following is a brief resumé of Dr. Knox's introduction to his translation.

The *Hyo-chu-ori-taka-shiba-no-ki*, to which Dr. Knox gives the secondary title, "The Autobiography of Arai Hakuseki" was written, apparently, with the sole view of leaving to the children of the author an account of his early life and his experiences at the court of the Shōgun. It was preserved in manuscript for many years but not long since was published in printed form.

This work includes a fairly complete account of Arai's family, youth, education, early struggles and later success. It is especially valuable for the vivid picture it gives of life in Old Japan, and that not merely in the circle in which he personally moved, for the narrative affords many glimpses into other and remote circles.

Arai was from an unfortunate family and only after much labour did he surmount his early difficulties and become the official scholar to the Shōgun himself. While without formal authority he was the confidential adviser of the Shōgun and through him ruled the empire.

Three ideas appear to have governed him:—(1) The reformation of abuses; (2) the reformation of the rites and ceremonies of the Shōgun's court; and (3) the exaltation of the Shōgun's power. The reminiscences of Arai's public life have to do with the period occupied by the sixth and seventh Shōguns.

The fifth Shōgun was a strict and superstitious Buddhist and a great patron of Chinese philosophy. He lectured upon the Daigaku to daimyo and priests and greatly stimulated learning; but unhappily, in his later years certainly, he seems to have given himself up to a life of profligacy which was associated with great corruption among the officials of all grades. In his efforts to protect the lower animals, the Shōgun lost all sense of proportion, and injuries inflicted upon dogs, cats, or birds, even by accident, were punished with great severity—by banishment, imprisonment or even in some cases with death. Doctors of high rank accompanied by six attendants visited sick dogs.

The coinage was frequently debased, daimyo were transferred from one fief to another for the sake of extortion, and taxes were greatly increased. A tax of three *bu* on each house was levied for the benefit of the dogs.

A Japanese historian says the fact that such abuses did not lead to a rebellion was owing to the transmitted virtue of the Tokugawa family. It was to bring back the Government to the old standards that Arai devoted his life. He was a Confucianist of the orthodox school of Chu-hi, and with the intensity of a Puritan he strenuously sought to carry out the Confucian theory in public and private life. He studied the ancient classics reverently and adopted them as his rule of life. We can understand Arai's conduct only when we think of him not as a politician or statesman, but as a moralist whose theories of law and government were rendered sacred by the solemn sanctions of religion.

He carried the same zeal into his work of reforming the rites and ceremonies of the Court;—indeed, to his mind such matters had a direct

bearing upon the welfare of the State. In some cases it is manifest that they were the outward sign of purpose to conserve the dignity of his master, especially in his relations to the King of Korea.

Some have appeared to see in these efforts an indication of disloyalty to the Imperial family, but a careful reading of the autobiography does not support this view. While quite possibly not a model of virtue in all respects, he deserves a high place among the worthies of old Japan. If judged by Occidental standards, Dr. Knox thinks it would be easier to find European statesmen of his century who were his inferiors than to find those who surpassed him in righteousness and fidelity to principle.

His interview with Pere Sidotti (see the *Chrysanthemum*, Vol. ii, pp. 390 ff. and *Trans. As. Soc.* ix pt. ii.) and his recommendations to the Shōgun in behalf of the imprisoned missionary show at least an unusual ability to take fair-minded views of men and things.

In addition to Dr. Knox's introduction, Mr. Greene read the larger part of the reminiscences which deal with Arai's family and his early life. These were of great interest both in themselves and as illustrations of life in Japan during the latter part of the seventeenth century.

It is proposed to read selections from the remainder of the autobiography at the next meeting of the Society. These selections will for the most part illustrate Arai's duties as official adviser to the Shōgun. These duties were of the most varied character and brought him into contact with many departments of the Government, and the incidents he relates exhibit widely differing phases of social life.

Mr. PARLETT expressed his appreciation of the paper which he had been able to read through. It was one of the most interesting he had read and gave one a glimpse into the old Japan as it really was.

Professor CLEMENT said the thanks of the Society were due both to Dr. Knox for his most interesting contribution and to Dr. Greene for kindly consenting to read it.

FUNERAL OF MR. RICE.

On Tuesday the last mortal remains of Mr. G. E. Rice, formerly of Yokohama and lately of Nagasaki, were consigned to the grave in the General Cemetery. The body of the deceased gentleman had been cremated at Nagasaki, and the ashes, enclosed in a brass-bound wooden urn were brought to Yokohama by the steamer *Gaech* to be placed by the side of his wife. A short service took place in Christ Church at 4 p.m. after which the casket was carried to the Cemetery, the following acting as pall-bearers: Messrs. R. M. Varnum, B. Gillett, H. M. Arnould, G. H. Scidmore, F. J. Hall, and C. D. Moss, Mr. W. W. Campbell (one of the deceased's sons-in-law), acting as chief mourner. At the graveside Rev. Geo. Wallace (who had officiated in the Church) performed the remaining portions of the service. Many mourners who were unable to attend sent wreaths and floral tributes.

THE DIET.

HOUSE OF PEERS.

The House of Peers met on the forenoon of the 25th inst., and proceeded to read a Government Bill sent up from the Representatives for amending the Law relating to Emigration. It was officially explained that the object of the amendment was to facilitate emigration to China and Korea, where practical impediments had been placed in the path of Japanese enterprise owing to the difficulty of obtaining Japanese labour. This had been the case notably with regard to the construction of the Sôul-Fusan Railway, and with regard to the floating of a Japanese steamer stranded in the Yangtze. The Bill was handed to a Special Committee.

The Bill for amending the Law of Patents having been favourably reported by a Special Committee, was passed at once, as was also a Government Bill for amending the Exchange Bills Regulations. This Bill, as already explained, empowers the Treasury to issue notes at a discount, according to the state of the market, instead of adhering to the plan hitherto pursued, namely, issuing them at a high rate of interest at their face value.

A Government Bill relating to the capital funds of provincial educational institutions was then handed to a Special Committee and the House rose for the New Year's recess.

HOUSE OF REPRESENTATIVES.

Thursday, Dec. 26.

The House met at 1 p.m.

Mr. Kwanno Zenyemon presented a question with regard to the collision said to have occurred on the Nippon Railway when the Emperor was travelling to the Autumn Manœuvres. The Government, in answer to his previous question on this subject, had denied any knowledge of such a collision, but he claimed that the Government was deceiving the House.

Mr. Mochizuki Chofu asked for information about the payment of officers' rewards with bonds calculated at their face value. He condemned such procedure as most unjust to the recipients, who, if they desired to convert the bonds into money, must suffer a heavy loss.

At this stage Viscount Katsura ascended the rostrum and spoke briefly with regard to the private Bill for placing the proceeds of the Chinese Indemnity in a special account. Despite the assurances of the Minister of State for Finance and the Minister of State for Foreign Affairs, the House persisted in regarding the Indemnity as an insecure asset. But it was part of a sum for which China had pledged herself *vis-à-vis* eleven Powers acting in concert, and it must be regarded as absolutely secure. This Indemnity was made up of two parts: the military expenses of each State and the compensation for private losses. The former was of immutably fixed amount, and if the sums set aside for the satisfaction of private losses proved insufficient to meet all the demands, it had been agreed that these demands should be reduced *pro rata*. Therefore it followed that the money coming to the Japanese State on account of the public Treasury was of absolutely fixed amount, and constituted a perfectly proper asset to place in the Treasury's accounts. The Government had included it in the revenue for next year, deeming that the wisest course for regulating the finances on a sound basis.

The President then announced that the Government desired to withdraw the Budget

and its correlated documents for the purpose of redrafting.

Several members vehemently protested against the withdrawal of the Budget without a full explanation of the reason, but their objections did not take the form of a motion, and were unheeded.

The President announced that it was desired to withdraw the private Bill for placing the Chinese Indemnity in a separate account.

Mr. Shimada Saburo objected, and persisted in demanding an explanation, but the House would not listen, and the withdrawal was voted by an overwhelming majority.

The President announced that the amended Budget had been received from the Government.

Mr. Kudo Kokan moved that although the Bill presented by the *Seiyun-kai* for placing the Indemnity in a special account had been withdrawn, the Bill introduced by him to the same intent remained before the House, and he moved that the Order be changed for the purpose of discussing the measure.

The Order having been changed, Mr. Masuda, on behalf of the Special Committee, said that the Committee advised the rejection of the Bill, and the House voted in that sense, despite a long speech by Mr. Kudo.

Various Bills of minor importance were then handed to Special Committees, and a Government Bill for extending to Hokkaido the operation of the Cattle Distemper Regulations, was passed through its second and third readings.

The House having agreed to discuss and dispose of the Budget during the current year, rose at 3.30 p.m.

THE DAWN OF LOVE.

Through a couple of years, pretty Mabel,
I thought you a gay little friend;
But I'm changed in a way I'm unable

To make my poor mind comprehend.
I just liked you as one of the playthings
I happened to meet on my way;

But now,
Somehow,
I am saddened at hearing you say things
I don't like you to say.

I considered it awfully pleasant
To meet you and merrily chat,
And I noticed that when you were present
Things seemed to fall rather less flat.
You were one of the just one or two things
I felt disinclined to pooh-pooh;

But now,
Somehow,
I'm in depths of despair when you do things
I don't like you to do.

You looked charming and cheery and kind from
The tuft in your toque to your shoes;
I could count on your turning my mind from
A settled attack of the "blues."

I just viewed you as one of the fair things,
Like butterflies up in the air;

But now,
Somehow,
I am worried at seeing you wear things
I don't like you to wear.

MOSTYN T. PICOTT, in the *Taller*.

CHINESE NEWS.

A Peking correspondent announces the destruction by fire of the Lung Ta Sze, one of the two temples devoted to the protection of the Imperial palaces, and adds that this is regarded by some as a sign of Heaven's displeasure.

Lieut.-Commr. Watson, of H.M.S. *Woodcock*, who has the distinction of having carried the British white ensign to Kiating in Western Szechuan, 315 miles above Chungking, on the

gunboat he has so long and ably commanded, left Chungking on Dec. 2nd by *kuatze*, having handed over command of the *Woodcock* to his successor, Lieut.-Commr. H. E. C. Somerville. Lieut. Watson arrived at Shanghai on the 13th, having made a record trip of eleven days from Chungking to Shanghai.

Sir Henry Blake, Governor of Hongkong, is to go on three months leave to England on the 1st prox., when Major-General Gascoigne will again be Acting Governor.

The *China Mail* says that the N.D.L. Australian liner *Prinz Regent Luitpold* had a breakdown in the Suez Canal, and had to stop for repairs to her engines. The fact was recorded as follows in an advertisement in the ship's newspaper:—"Lost.—In the Suez Canal, five hours. Information will be gladly received by the Engineer."

An action was brought on Dec. 17th in the Shanghai Supreme Court by W. Wilmer, former manager of the *New Press*, against Chesney Duncan, the proprietor of that paper, to recover \$1,050, wages due. The petition of the plaintiff stated that he entered the service of the defendant about the first week in April 1901, as business manager of the *New Press*; that the salary of the plaintiff was to be at the rate of three hundred Mexican dollars per month, and the engagement was to be terminable at one month's notice; that there was owing and due to the plaintiff by defendant the sum of seven hundred and fifty dollars for salary, made up as follows: viz: (a) One half of \$300 for the month of September last, \$150; (b) One month for October, \$300; (c) One month for November, \$300; total \$750. The plaintiff claimed the further sum of three hundred dollars in lieu of receiving one month's notice to leave, as agreed upon at the time of engagement. The Court awarded \$792 with \$36 costs.

A curious incident took place in the course of the trial of a case in the Shanghai Mixed Court the other day in which a native detective was charged with abducting a girl. The question of whether a criminal charge could be brought depended on whether the abductor had had criminal relations with the girl. The Chinese Magistrate settled that point, though both the girl and her mother denied that there had been anything of the kind. First he had the mother beaten in order to make her confess. The detective, who was on his knees, took an oath in the Chinese way, breaking a saucer, that he was not guilty of any criminal relations with the girl, but the Magistrate, not satisfied with this, desired another test and proceeded to carry it out. The girl's forefinger was first cut and the blood therefrom allowed to drop into a bowl of water provided by the Court. The detective's finger was next cut and the same proceeding carried out. The Magistrate then held that as the blood mixed, the detective was guilty, and remanded him for trial before the Court on a criminal charge.

Great sympathy, says the *N.-C. Daily News*, will be felt with H.E. Chang Chih-tung in the melancholy death of his grandson, of whom he was justly proud, just as the young man was returning home. "He was an extremely smart young fellow, very bright and intelligent. When he arrived at Shanghai some two years ago on his way to Japan, he was met at the Wharf by the Shanghai officials, who were scandalised at his appearing in a semi-Western military uniform, instead of the regulation long silk coat, official hat, etc. He said that he meant to be a soldier, and therefore he had no use for the full dress of a Chinese official, in which it was impossible to move about. With his native intelligence, and the prestige of his birth he bade fair to be of great value to his country, and his premature death just as his education was completed is very greatly to be regretted." It appears that on the 11th December, the young fellow, whose name was Chang Houk'un, was returning home from Japan. He had reached the open space in front of the yamen doors, when his horse took fright from a jinrikisha. The animal reared so badly that the rider was thrown, and was carried into the yamen in a dying condition."

CHRISTMAS.

Christmas!

Ah! memories rise and almost choke us,
Surging across the barriers of time and
space,
As visions of old Homelands and far firesides
glisten
At echo of the word.

Oh, for those happy days before the circle
parted!

When very near the Angel-host approached,
To sing the Psalm of Peace, Goodwill to
Men—

Before our feet went wandering, the strange
Gods seeking—

To us in exile thoughts at Christmas-tide
are bitter-sweet!

Yet good it is to pause a space just now,
To let old memories wander at their will,
And on this Day of Days to gather once
again
To keep the Feast;

To keep the Feast, the Yule-log crackling,
Revive the faiths of far back years,
Cement the friendships of these later days,
And strengthen all those little ties of love,
The faint forerunners of the Reign of Peace.

A.B.B.

X'mas, 1901.

THE STORM ON CHRISTMAS DAY.

The long spell of beautiful weather that Yokohama and Tokyo enjoyed for several weeks was broken up on Christmas Day by a downpour of rain which proved the forerunner of a violent storm from the north-west. It is seldom that this region of Japan has to complain of a wet inclement Christmas, but the present year has proved a most marked exception.

YOKOHAMA.

A wet Christmas was the cheerful experience of Yokohama people, as well as of those who stayed at home and those who had gone abroad into the country. Christmas Eve weather was quite acceptable, being dry, if cold, with moonlight to show late folks home, but during the night a change set in and the morning broke cold and wet, rain falling at first in a drizzle and afterwards more heavily. Many people hoisted flags on their business places and residences, most firms closed their offices, and the day was generally celebrated as a holiday. As the evening wore on the weather became more inclement and after midnight quite a gale developed with heavy, tropical rain. This lasted for several hours but towards morning the weather moderated though a strong breeze still prevailed and rapidly dried the roads. China-town, of course, was flooded, and the scouring rain cut deep gullies in many of the Bluff roads.

MIDNIGHT MASS.

The usual services took place in the various places of public worship. At the Roman Catholic Church on Christmas Eve, the Rev. Pere Rey was the officiating clergyman and the service consisted of Haydn's First Mass. There was a good attendance. In the course of the evening Mrs. Mollison sang *Ave Maria*, and Messrs. Max Schluter and Poole assisted in the musical part of the service.

SERVICE AT CHRIST CHURCH.

The morning service at Christ Church, Yokohama, was very largely attended. The Church was nicely decorated, festoons of evergreen being wreathed around the pillars, and the pew-heads were adorned in appropriate fashion, while immense clumps of bamboo waved under the high chancel roof. The music was suitable to the day, embracing the old-time hymns, "Christians, awake"; "Hark, the herald angels sing"; and "While shepherds watched." The anthem, "We have

seen His star in the East," went very brightly. The sermon was preached by the Rev. Geo. Wallace, of Tokyo, who dwelt upon the significance of the birth of Christ and the lessons and resolves which should be deduced therefrom.

THE FOOTBALL MATCH.

The Rugby Match on X'mas Day between teams of players "Born in Japan" and "The Rest" came off in inclement weather. Unfortunately neither team was fully representative, but with two exceptions on either side all those who had agreed to play turned up. Was it Christmas cheer or the weather?

W. S. Moss kicked off for "Born in Japan" and from the outset the play resolved itself into a forwards' game—the slippery ball rendering accurate passing impossible. During the first half each side scored once—neither try being converted. In the second half "Born in Japan" scored four times—the last being the only occasion on which the major points were brought out by W. S. Moss. Jeffery also scored for the Rest after a good run, Barnard again failing with the place. The result was, "Born in Japan" won by 1 goal 4 tries (17 points) to the Rest, 2 tries (6 points). A considerable number of players were new to the Rugby game, but we trust that this match will not be last occasion that they don the jersey and we anticipate a great improvement in a short time. The forwards must remember that they are meant to work in the scrum, and not to hang on the outskirts and rob the halves of their share of the play. We also notice a fatal tendency, which should be promptly corrected, of certain of the forwards endeavouring to get into the scrum from the sides instead of from the back. The former method is useless, the latter the proper way, which those new to the game must learn. Practice makes perfect and we hope to see many good games before the end of the season. More than a word of praise is due to Mr. Bathgate who, as usual, turned up in spite of the rain to carry out the unthankful task of referee:—

BORN IN JAPAN (Colours).—A. W. S. Austen, S. Wheeler, K. van R. Smith, E. W. Kilby, G. A. Allcock, H. W. Kilby, J. E. Moss, W. S. Moss (Captain), F. Pollard, O. Stronie, J. Helm, E. J. Moss, Jr., C. S. Moss, A. Kingdon and H. C. Austen.

THE REST (White).—W. M. Squire, S. A. Jeffery, C. E. Libeaud, E. G. Fradley, A. Scott, F. O. Stuart, H. E. Hayward, E. F. Crowe (Captain), H. K. Barnard, A. R. Firth, W. R. Lemarchand, M. F. Stephens, W. J. Waddilove, F. B. Reece and C. H. Thorn.

CHRISTMAS AT THE SEAMEN'S MISSION.

Early in the day visits were paid to the German, American, and British Naval Hospitals, and suitable gifts were presented to the patients in the name of the contributors to the Christmas Entertainment fund. At 6 p.m. 60 Seamen and Marines from the ships in port, and from the U. S. N. Hospital, sat down in the Seamen's Free Reading-room at the Mission to the Annual Christmas dinner, after which various games were played. At the close of the evening, a fine Christmas Tree was lighted and slips of paper handed round with a number written on, the slip corresponding to the number of a gift on the tree, which each man carried away with him as a memento of Christmas, 1901, spent at Yokohama.

UNION CHURCH.

A fairly large congregation assembled in the Union Church on Christmas morning to participate in the service, which was conducted by the pastor, Rev. E. S. Booth, assisted by the Rev. Dr. Dearing, and Rev. J. W. Frank. In the sermon, the pastor referred to the recently developed theory regarding the movements of the starry constellations which resulted in the detection of the original Star of Bethlehem by the Magi. Appropriate music, including the spirited anthem, "Behold, I bring you good tidings" (Goss), was efficiently rendered by the choir, while the tastefully arranged decorations materially added to the joyous observance of the Festival.

THE POET'S CHRISTMAS.

An anthology of Christmas verse would make a tolerably large volume, and would be drawn from the writings of poets of every age since the dawn of the Christian era. Much of it, of course, is of a devotional or mystical cast; but not a few poets have approached the subject from the human, festival point of view. The two singers who have perhaps treated most fully of the pleasant subject of Christmas observances are Sir Walter Scott and George Wither.

Wither, curiously enough, was of the Puritan party. The Roundhead Parliament tried hard to abolish Christmas; they forbade its celebration, ordered the shops to be kept open on December 25th, and threatened with pains and penalties those who should hold or attend service on that day. Yet the poet who, next to Milton, was perhaps the most distinguished man of letters who followed the banner of the Commonwealth, George Wither, sang as joyously as any poet devoted to Church and Crown of Christmas festivities and Christmas joys. Wither was a thorough-going supporter of the Parliament, for he sold his estate to raise a troop of horse for its service, but he must have been a much more liberally-minded man than many of those for whom he fought. His Christmas verses give a lively picture of old time observances, and have no touch of the sourness which is popularly associated with the Puritan way of looking at things. He begins:—

So now is come our joyfulest feast;
Let every man be jolly;
Each room with ivy leaves is drest,
And every post with holly.
Though some churls at our mirth repine,
Round your foreheads garlands twine;
Drown sorrow in a cup of wine,
And let us all be merry.

There is not much gloom or sourness about those lines.

Wither goes on to celebrate the yule-logs, the Christmas fire, the music and dancing, the scrambling for nuts and apples, and general jollity. Not a few features of Wither's Christmas-keeping are now out of date. Who knows now what the old-fashioned Christmas pie contained? Yet it used to be the central dish of the feast. It was often made in the shape of a coffin, in imitation, so it is said, of the "cratch," or manger, wherein the Child of Bethlehem was laid. Its chief characteristics were the variety and the miscellaneous nature of its contents. A Frenchman, who travelled in England some 200 years ago, wrote that this "nostrum," as he called it, was "a most learned mixture of neats-tongues, chicken, eggs, sugar, raisins, lemon and orange peel, various kinds of spicery, &c." Our forefathers must have been valiant trenchmen. Wither also mentions various customs and games now nearly obsolete—girls going about the streets with their "wassel bowls," mumming by the youths, and the game of Rowland-ho, whatever that may have been.

Sir Walter Scott gives an equally lively picture of the Christmas of the olden time, in the introduction to the sixth canto of "Marmion." He celebrates the village games—who now plays at "post and pair"—the Christmas fire and the Christmas fare:—

Then the grim boar's head frowned on high,
Crested with bays and rosemary.

There the huge sirloin reeked; hard by
Plum-porridge stood, and Christmas pie;
Nor failed old Scotland to produce,
At such high tide her savoury goose.

From the eatables he proceeds to the wassail-bowl, the "carols roared with blithesome din," the coming in of the mummers, and other features of the cheerful pictures, concluding jovially:—

England was merry England when
Old Christmas brought his sports again.
'Twas Christmas broached the mightiest ale;
'Twas Christmas told the merriest tale;
A Christmas gambol oft would cheer
A poor man's heart through half the year.

Another Christmas singer of the joyous kind was Robert Herrick. He rings the changes on the festive feature of Yuletide—the log, the beer, and the "rare mince pie." He enshrines in his verse the old notion that the yule-log should be lighted from a brand, carefully preserved, of that of the preceding year, and fervently proclaims, as a West Country poet should, the virtue of wassailing the orchard:—

Wassail the trees, that they may bear
You many a plum, and many a pear;
For more or less fruits they will bring,
As you do give them wassailing.

This "wassailing" was formerly universal in the fruit-growing counties of the West. The ceremony was usually performed on Twelfth Night, and consisted in singing certain doggerel verses round one of the oldest trees in the orchard, followed by a due circulation of the cider-jug, concluding with the firing

of guns, charged with powder only, among the leafless branches of the trees. These proceedings were supposed to bring luck to the orchard, and to have their reward in the following autumn. "Wassailing" of this kind has died out for the most part, but here and there the old custom is still maintained in something of the ancient fashion. The other wassail custom, that of children going from house to house on certain days singing a wassail song, and asking for pennies or cakes, or both, is still common in various parts of old England.

The section of Christmas poetry which treats of the devotional or religious aspect of the time is, of course, far larger than that which refers to Yuletide customs. Carols, alone, are very numerous. Most of the earlier examples are of joyful tone, while those of the 17th century and later in most cases, are in a more subdued key. It is a carol of Henry VIII.'s time which begins jubilantly:—

Noel, Noel, Noel, Noel,
Who is there that singeth so Noel,
Noel, Noel!
I am here, Sir Christmass;
Welcome, my Lord Sir Christmass,
Welcome all both more or less
Come near Noel.

Hymns of the Nativity, and poems relating to the different incidents of the Christmas story—the angel's song, the coming of the Magi, and so forth—have been written by most of our English poets, from Milton, Ben Jonson, Crashaw, Herrick, and Southwell to Rossetti, Keble, Faber, Tennyson, and Mrs. Browning.

Nor has Christmas been neglected by the singers of America, although the rites of the festival were, in New England at least, more honoured in the breach than in the observance till comparatively recently. Longfellow's Epiphany verses are particularly beautiful. The following is the first stanza:—

Three Kings came riding from far away,
Melchior and Gaspar and Baltasar:
Three wise men out of the East were they,
And they travelled by night; they slept by day,
For their guide was a beautiful, wonderful star.

Whittier, although a Quaker, paid tribute to the season in his "Christmas Carmen." One of the most beautiful of Christmas hymns was written by the late Phillips Brooks, Bishop of Massachusetts. It consists of ten melodious stanzas, of which one may be given here:—

Where Charity stands watching,
And Faith holds wide the door,
A dark night wakes, the glory breaks,
And Christmas comes once more.

NOËL.

Our wanderings of the last few days have convinced us that Christmas is fast becoming a popular fête, a blithe season, with the Parisian. Once upon a time he almost overlooked it, postponing his pleasures and expenditure until the New Year; but the chance of rejoicing on two occasions instead of one has at last appealed to him—and so, like his "bons voisins d'Outre Manche," he makes many a gay little preparation for December's happiest hours. Some time must elapse, of course, before he appreciates the Day so thoroughly as to hang holly in his hall and mistletoe above his door; in the meanwhile, he—ignorant of their more proper place—pins them to his coat, observing: "Me voilà décoré, mon cher." Nor can he be expected to take to a mince-pie all at once, or appreciate the necessity of a turkey; for the moment it is enough that he should hurry home a vessel labelled "plum-pudding" (purchased at a boulevard pâtisserie), and acquire the exhilarating ingredients that eventually produce "un punch à l'Anglais." Again, oranges are a reasonable substitute for almonds and raisins; and if no crackers with love-sick mottoes conclude the feast, there comes a Christmas tree equipped with candles as well as gifts. How often, in our wanderings, have we seen these growths; lofty or low, established in a tub or planted merely in a pot! "Arbres de Noël," said the card above them; you might have them furnished or unfurnished. Then, the Eve, the night before the Day—in how many Parisian households are whispers, questions, hints exchanged among the children. Just as in London, they must go flushed to bed; toss and turn for hours through expectation, excitement. And if Edouard and Jeanne have not hung out their stockings, they have exposed their shoes; and the shoes do just as well, are just as laden as the stockings across the Channel in the morning. Once more, the "étrenne," your yearly offering—otherwise, vulgarly, the Christmas-box? Although it should not be claimed before New Year's Day, it—as in England—must often be given in advance. The same people seek it; the same amiability (on their part) prevails as the moment for its production draws near—you are impressed by the smiles, courtesy, and industry of your servants; you notice the salute (exceptionally sweet-

ing) of the postman when he meets you in the street; in short you enjoy the solicitude, the politeness, the affection of everyone who, during the past twelve-month, has done something—however trifling—for you. Still, when the moment actually arrives, you are not told bluntly that the postman is "there"—waiting for his Christmas-box. You only learn that he has called to express his "meilleurs souhaits;" that he would beg you to accept an almanac. Indeed, he sends in several: so that you may inspect them, choose. Also, the gift is illustrated, equipped with postal, telegraphic, astronomical information. Again, it stands without support, or assumes a graceful slanting position. Moreover it is embroidered in blue or red, or gold. And you get many of these almanacs—for three or four postmen, as well as more than one telegraph boy, serve you. And your stock increases hour by hour: because the stationer, the newsagent, and other tradesmen would furnish you with the same offering. And you become surrounded by almanacs: have not desks, tables, or mantelpieces enough. And so you, just as in England, produce your present: receive, in your turn, Christmas greetings, Christmas gifts, Christmas thanks.

Once conscious of these resemblances—these imitations of his own Christmas—the Englishman in Paris must not complain too bitterly of his exile. He may have his tree; eat his pudding; beforehand, the pudding not resisting, he can slip in the button or the sixpence. And if he be—as we hope—a philosopher endowed with a generous disposition, he will know that, if his family and friends are rejoicing "over there," they will drink his health, deplore (affectionately) his solitude, his absence. And then allowing always that he looks upon the brightest side of things, that he takes his stand by what is best in life, an admirable philosophy—he may derive happiness from the happiness of those about him. And it seems almost universal, this happiness; notwithstanding the weather, no matter how dim the street, how small the home. Bazaars enclosed in passages are as exhilarated as the Lower Arcade; and far more plentiful. They "lead off" right and left—"Galleries," "Passages," "Impasses;" and they shelter curly-haired dolls, and regiments of tin soldiers, and rows of dogs, and troops of monkeys, and colonies of cows; and, all day long, Parisians—either accompanied by their children or alone—inspect these curiosities; and watch them wound up, and follow them as they strut along, and express amazement when they produce a different, an appropriate noise. As interested as the children are the fathers; so interested that they ask questions, examine the toys, recall the features and performances of their own gay playthings of years and years ago. And they admit that their dolls, their soldiers, their stuffed "touters" were far inferior to these. And they protest that, confronted by these modern prodigies, they—in spite of their age—can quite appreciate the pleasure of romping on the floor with them. And marveling all the time, they say: "Un phénomène, mon cher; un vrai miracle, mon vieux; quelle révolution, quelle progrès, mon Dieu!" In shoddy, "miscellaneous" bazaars there reigns the same seasonable exhilaration. You might be in Holloway or Camden Town, or in the Edgeware Road; the only difference is that the people are less depressing, more amiable. "Noël," says the stimp of white cloth stretched across the entrance; "Noël," announce the cards posed upon the goods; "Voyez, voyez—pour Noël," cry the attendants, red-handed youths. And milliners and mechanics, washerwomen and workmen, servants and concierges hover over the stalls; and carry off brilliant-faced dolls for "les gosses;" and bright bow ties studded with spangles, at sixty centimes, for "le vieux;" and boxes of scented soap (three cakes in each)—possessing the perfume of the violet, the lilac, the rose—for "Amélie, ma fille;" and packets of pink face-powder, sparkling atoms of jewellery, sets of liqueur glasses, musical clocks, "bijou" lamps, illustrated cigarette cases, tortoiseshell combs, vivid water-colours, pictures of fires, wrecks, funerals in *oils*—all "marked in plain figures," all ranging in price from thirty-five centimes to three francs and ninety-five centimes, all for "Noël." Then, the booths—they that rise on the kerbstone of the boulevards, cheap stalls facing splendid shops. Already they are being put together; on Christmas Eve their commerce will have begun. And they will stretch from the Madeleine to the Faubourg Montmartre, on either side, an amazing avenue. And before each booth spectators will assemble—so that you, from the top of an omnibus, may look along a line of Parisians divided into groups, fifty or sixty groups bathed in the yellow light of flaming lamps. And the groups will dissolve and form again, bewildering you; and the groups will pass on and on until your eyes blink; and the groups will only grow smaller when it is time to attend the Midnight Mass conducted impressively, splendidly, in almost every church.

There, in old St. Sulpice with its different towers, will be the faithful of the quarter—from the senator to the shopman, from the prosperous "rentier" of the

Luxembourg to the queer old men and withered old women who sell flowers in the opposite square. The last will enter so soon as the doors are thrown open; cross themselves on the threshold with holy water, take their places quietly, kneel immediately to begin a prayer. The rest will approach when the candles are being lighted in the distant altar; but the old men and the old women will hear nothing, see nothing until the arrival of the priests will startle them, bring them to their feet. And then—in spite of their rheumatism, their age, they will rise immediately; and bow; and kneel again; and cover their wrinkled faces when the bell rings; and listen rapturously to the choir. Even when "dismissed," they will remain behind, disregarding the departure of the others. Another prayer; and they will go forth from the warmth of the church to the cold of the square, into the morning, into the approaching dawn of a new day—Noël.

THE MASQUE OF CENTURIES.

I had fallen asleep in the Church of Saint Apollinaire d'Novo. It is a place for dreams, whilst memories of Botticelli's "Spring," which I had been but lately admiring in the Uffizi at Florence, mingled in my slumbers with the brightness of the glorious memorials of the old Empire which blazed above my head in colours as dazzling as the "yellow" of Dante's Mystic Rose.

Suddenly a stir as of a movement broke in upon my dream. The noble lords and dames seemed to step from their walls and form in two lines along the aisle leading to the high altar, above which the World Ruler and His Virgin Mother shone out in a splendour which would have blinded the courtiers of Solomon or of Nero. Sweet music sounded through the air, and the doors of the church flew open at its notes. Soon the head of a procession was seen entering the portals of the great basilica, and in solemn tones rang out the mystic words which tell how to the Lord of Time one day is as a thousand years and a thousand years but as one day. I was to meet the Centuries face to face and as the last "*Per secula seculorum*" died in my ears, their leader stepped into my sight. He was a little child, robed in white and crowned with pale silvery olive, which gleamed with a soft, mysterious radiance. Yet his garments were dyed as with the blood of the grape, and the clash of swords chimed in ominously with the strains of "Goodwill unto men," which greeted his entry. "I come not to bring Peace," were his words, and anon was heard the knocking of nails into wood and weird sounds as of "Crucify, crucify," whilst in an oak grove, streaming with blood, I saw wild men, clothed in skins, slaughtering victims who seemed Roman soldiers on rude stone altars.

I had seen the First Century. Behind him walked a studious youth, with grave, philosophic mien, clothed in the white robe and purple laticlave of a Roman patrician and studying a scroll which bore illuminated the name of Plato. From time to time an inquiring look passed over his intellectual face lit up by a rare smile, in which doubt was blended with contempt. He was followed by a fierce-looking gladiator dressed in barbaric splendour. His head was wreathed with garlands, his girt breastplate blazed with emeralds, his javelin and shield were damascened with gold and ivory. Ever and again he uttered some coarse camp oath, and his Latin was besprinkled with crack-jawed barbarian words. Yet a ghostly form pressed Rome's eagle into his hand and threw on his shoulders the Caesar's purple cloak. But who is this fair maiden, her garments bright with the sheen of heaven, who comes next? In her hand she bears red and white roses, snow-besprinkled, and on her breast flames the cross with its mystic emblem of X and P, and its scroll inscribed with the words which announce the victory of the Nazarene. It is Saint Dorothy, and the Fourth Century brings to the pagan world the Faith of Christ. Before her the saints strew their palms, the church re-echoes with the strains of "Enter thou into the joy of thy Lord." But scarce has the last note died away when the air is rent with barbarian "Hurrahs." A rustic wagon rumbles in, drawn by oxen, whose housings are costly tapestry, gold-woven and brodered with the tale of Ruined Troy; on it, on a rude bench, carved with twisted dragons, sits a stately dame robed in purple, her fair hair entwined with beads, her cheeks flaming with vermillion, and framed in heavy earrings of chrysolite and lazuli. Before her stride girls, clothed in the long white robes of Greece, their heads crowned with violets, on their necks heavy golden serpents, but whose hands are fettered and whose cheeks are flushed with shame. The dark sky behind is red as with the light of burning cities. 'Tis the wife of Alaric who enters, and her wain rolls over broken crosses and battered eagles. Behind is a vacant space. The Sixth Century is missing from the train. But a gentle murmur is heard from the altar, and the Divine Figure above it bends towards our questioning eyes with a look of welcome. She is the Sixth

Century, she the "Theotokos," Mother of God, she the "Augusta," before whom all things in earth and heaven bow in homage, she who announces the last century of the old civilisation, the century which left to Europe, garnered up for future ages, the heritage of ordered law, the century which led England to the Cross. How can I describe adequately the throng which followed? Bright-clad Gauls and Spaniards, splendid in barbaric tatarians, grave Arab sheikhs, their heads covered with white veils bound with the rope of camel's hair, a fair maiden robed in the regalia of a Roman Empress, but whose diadem has been cloven by a blow from battle-axe of the kilted rover, with blood-bespinkled hair, who strides behind her, shadowed by the folds of the Raven standard; last of all a matron, with grave, scarred face, as of one newly awakened from some mighty dream, bearing in her hand a snowy mantle brodered with emblems of newly-built churches; such were the centuries from the Seventh to the Eleventh. The Twelfth came next; a knight in pointed helm and chain armour, whose silver shield was blazoned with a blood-red cross, led in a maiden clothed in the slave's white, bearing in her hand a basket laden with linen newly washed. Her fair hair was tumbled with the sea breezes and wet with the salt sea spray, and a bird, with plumage so fair it were doubtful if it were of earth or heaven, seemed to perch on her shoulder and whisper in her ear. It was a Crusader, and his companion was Gudrun, the truest type of the old romance of Germany. Behind him followed another knight, but robed in vestments of peace, and bearing in his hand a lyre, which ever and anon he twanged, whilst methought his lips were murmuring a woman's name.

Beside him walked a friar, clad in brown, with bare foot, who now and again kept turning to his companion with an anxious look, only to be repulsed disdainfully with a mocking smile. But who is this who next appears to 'wilt my wondering eyes?' 'Tis a fair lady, on whose head is a swan-white veil, crowned with olive, and whose flame-red robe is half hid under a green mantle. With puzzled look she scans a volume which bears, inscribed in Grecian letters, the name of Homer. With a start I remember where I am. In good truth this is Beatrice, and in rapture at the sight, I reck not of the grisly skeleton who follows leading to their tomb all ranks of men. The Fifteenth Century is surely that grave merchant, decent in cloak and hood of tawny, and in hose of grain. He has his pen and tablets at his girdle, but in his hand he holds a picture, and methinks I spy a world chart in his budget. Who follow next? A bevy of ladies fair, bright with Indian muslins, radiant in Eastern gems and feathers of strange Western birds, dance in, followed by grave statesmen with cunning, shifting eyes, jostling tough seamen fresh come from the circuit of the globe, and divines who bear in their hands the torch and sword beside their books; whilst behind them English voices sound, hymning a queen, who enters with Imperial air, gorgeous in high starched ruff and jewelled robe. Behind her come once more divines grim in gown and band, with close-cut hair; burly traders in soler doublets and trunk hose; soldiers, some in lace and satin, others again in buff leather coats, one of whom bears in his hand a head which seems a king's; yet, heedless of this, grisly warning, a gay group of courtiers, bright in fluttering ribbon and in varied silks, bow close at his heels before a king whose short stature is enhanced by his high red shoes and flowing periwig. Is it wonderful that the ill-omened words "Tis the voice of a god and not of a man" seemed to ring through the air, mocking the courtiers' "Hosannas," to usher in the Bacchanals whose rebel rout led in the Eighteenth Century? A mad crowd, in truth, it was, with powdered wigs in place of the ivy wreaths of Helrus, and satin saques, hoop-puffed out, for tigers' fells; but whose eyes were bright with wine, whose cheeks flamed with rouge, whose wild dances would have shamed the Corybantes, and whose tongues rang out words of defiance against the Highest such as the startled air had never heard since the day when the giants warred with Jove. But why, all of a sudden, come these sleek, soberly-vested men, whose prim faces bear an air of doubting scorn, and whose eager looks seem to question all things that be in earth and air and sky; and why are they followed by that tattered throng, foul with the dirt of city slums, their heads covered with the red cap of Liberty, who trample crown and sceptre under foot and bear in their hands the spoils of plundered churches? I can see the fair Gothic dames, the Arab sheikhs, the fierce sea-rovers from the Northern Main cast longing backward looks, and gather they are eager to claim the newcomers as their flesh and blood. Can the Nineteenth Century give us the meaning of their coming, for behind a crowd of generals in tight uniforms and three-cornered hats heavy with plumes, and ladies in dress which has nought of Greek save the name, I see a man clad in the sober garb of some English country squire, carry in his hand a book whose title runs "The Origin of Species?" Has he, perchance, found the clue to this reversion to the Past? He is not the only English-

man in the crowd; for beside him stands a sturdy form in low-crowned hat, bright blue coat, buff waistcoat, and buckskin breeches, but wearing inconspicuously enough on his shoulders an Imperial mantle, who, by the light of a flaming furnace, seems painting the World Map a bright red. Yet, stay: who is this shadowy shape in wide-brimmed hat and handkerchief, with rough beard and hair-covered hands, who springs forward, and checks his brush as he would colour South Africa, whilst from the throng of knights and dames before me rise the sad yet mocking strains which once taunted the ear of falling Babylon: "Art thou also become weak as we? Art thou become like unto us? . . . Yet thou shalt be brought down to hell, to the sides of the pit. . . . Is this the man that made the earth to tremble, that did shake kingdoms?"

I started from my slumbers and rushed out of the church into the starlit night.

FOREIGN MISSIONS IN THE TWENTIETH CENTURY.*

By REV. S. H. WAINRIGHT, M.D.

What lessons may be learned from foreign missions in the century just gone by? What changed conditions may we expect and what new methods may we require in the present century? After a hundred years of effort, do we find the foreign mission movement to be in accord with the great command of Christ and the great aim of His Church? To these and similar questions every one interested in the spread of Christianity must seriously address himself. All secondary questions must be put aside in the present discussion and points of fundamental importance touched with the utmost possible brevity. A very general survey of the missionary problem is the aim we have in view. The last century was a time of equipment and preparation. From our ancestors we inherit a world wonderfully made ready for Christian propagation. This is seen in the easy physical access to the nations, the overcoming of obstacles to the mastery of foreign tongues, the translation of the Scriptures into the languages and dialects of earth, the inauguration of enterprises of Christian philanthropy, education and literature, and the organization of Christian churches. In the home lands 449 Missionary Societies, backed by great churches and immense resources; and on mission fields, 15,460 missionaries; 73,615 native workers, ordained and unordained; 11,039 organized churches, with a membership of 1,317,689; besides various Christian institutions, constitute the combined and aggregate energies and agencies of the Church, as it enters the century for the final conflicts with heathenism and unbelief.† The past century was illustrious to a degree surpassing any preceding one, but if the present century accomplishes the overthrow of age-entrenched heathenism, it will be a period held in everlasting remembrance in the ages to come. Let us turn our attention earnestly to the problems of this vast undertaking, happy all the time that we have a part in it.

The top of the mountain in Galilee, where Christ gave His last commission to the Church, is the only point from which to survey and judge the work of foreign missions. In that utterance, and the supplementary words recorded elsewhere, is contained the ground, the aim, the scope, the character, and the means, of the Church's mission to the world. Its principles are regulative to the Church for all time. Its terms are axiomatic in all Christian propagation. We have no greater authority than its commands confer, no greater endowments than its promises bestow. Christ's plenipotentiary authority, in heaven and on earth, is the foundation of the commission and the foundation of the foreign mission movement. From this fact it follows that all nations belong to Christ and that the Church has a definite mission from Him to all nations. Analyzed, the commission is shown to involve (1) a forward movement; (2) a proclamation of the gospel; (3) the making disciples of nations, which includes besides the proclamation of the gospel, baptism into covenant relationship with the triune God and instruction after baptism in the facts and truths of revelation;

(4) the consecration of all believers to this work, who are to be clothed with the power of the Spirit and accompanied by the presence of Christ. Hence, a forward movement, worldwide in scope, not temporary, not intermittent, but persistent, should be pressed onward, until "the kingdom and dominion and the greatness of the kingdom under the whole heaven shall be given to the people of the saints of the Most High." Hence, the aim of the Church is distinctly spiritual, which is nothing less than to bring men into the relation of fellowship, allegiance and obedience to their Lord. Hence, the message which is to be taught and expounded is unique in character, being matter of revelation. Hence, the first principal confession on which the churches are founded is faith in the Father, Son and Holy Spirit, and no results can be called Christian not bearing this mark of genuineness. Hence, finally, the accomplishment of the sublime purpose of the commission is to be conspicuously a work of God, that all may be able "to see and know and consider and understand together, that the hand of the Lord hath done this, and the Holy One of Israel hath created it." Times and circumstances change, but these principles remain constant. Though varied in their application, they should never be obscured, over-ruled or neglected. Apostolic precedent, though instructive, is not necessarily binding. If both the principles and facts governing their decisions are the same in our case, we may do well to follow them. But the conditions of our time differ in many important respects from those in the Apostolic age. The early missionaries, whether labouring in Palestine, Syria, Proconsular Asia, Macedonia, Greece, Rome or Spain, were under one government, were within the bounds of one empire. The Church sending out missionaries was without financial resource and had neither an elaborate theology nor a complex ecclesiastical system. There were no denominational differences and hence no overlapping in work. In founding churches, the Apostles were able to follow in the wake of Jewish emigration, finding as a basis for beginning, Jews with their synagogue worship and Old Testament Scriptures. In that age the printing press was not known, medical science was undeveloped, and general education was not a demand or necessity of the times. These and other changed circumstances compel us to diverge more or less from the course followed by the Apostles, though constant reference to their example will be helpful. Taking up some of these problems and having constantly before us the terms of Christ's commission, let us consider (1) the relation of the missionary to social customs and institutions, especially to governments. As to society, we need, it seems to me, to beware of the modern habit of mind which regards a favourable environment as sufficient for the needs of life. Whatever truth there may be in the power of circumstance, earthly well-being cannot produce spiritual life and health. A feather-bed cannot make a sick man well. In Christ a man is a new creation, but in more favorable circumstances, he may remain the same proud, selfish, worldly that he was before. The reform of the social usages and institutions of a country cannot accomplish the aim the missionary has in view. Moreover, to begin with a revolt against the established order of things, which even in Japan is still regarded by many as sacred and inviolable, would awaken needless opposition, prejudice and suspicion, and tend to obscure the main issue. The practice of our Lord, of John the Baptist, the Apostles and the primitive Church was uniform in making no attempt to reconstruct society. They submitted, and urged submission, to unsound and even oppressive social and political arrangements, choosing rather to avail themselves of these imperfect conditions to radiate the Christian graces of meekness, patience and submission. Our Lord's reserve amid the disordered conditions of His age was a mark of His greatness. He knew that vital morality was the cause not the effect of social civilization. He confined Himself to the constants of human nature and life and was too wise to fix, with His sanction, a variable expedient upon society and make of it an irrevocable law for all ages. Hence, it is clear, that

* Read at the meeting of the Missionary Association of Central Japan, at Osaka, Dec. 17th, 1901.

† The statistics are for Protestant Missions and are taken from Dr. Dennis's tables.

as a guiding principle, the missionary should not meddle with the framework of society. He is concerned, and the Church he represents, with the spiritual order and the spiritual aspect of the temporal order. By the terms of the commission all history belongs to Christ, but the Church is armed with no other than spiritual power, and touches the whole round of life but only in its spiritual aspects. In his relation to Governments, the claim of the missionary for protection is no greater and no less than that of every other alien. In fact, his safety is bound up with theirs, and to claim protection for himself and his interests is to claim the same for other aliens and their interests; while not to claim protection, when wronged or injured, is to jeopardize the safety and welfare of every stranger sojourning in the same land. But inasmuch as Asia has become the scene of double invasion from the West, one spiritual, and the other political in character, it should be kept forever clear that the Christian Church in its missionary operations has no commercial or political aims or alliances whatever. In outlining foreign policy, Mr. Secretary Hay recently stated that the normal activities of his country were entirely commercial, and all that was desired was an open door, a fair field, and no favour. Should we not be able to declare as explicitly that the normal activities of the Christian Church are entirely spiritual, and all that is desired is an open door, a fair field and no favour.

(2) Next is the problem of the relation of separate Christian Communions to one another. Apart from the unfavourable impression of a divided Christendom, separation involves duplication and hence waste, dissipation of energy, and hence weakness. Committees on comity or federation will not solve the problem. They are straws showing the direction of the current rather than forces exercising a controlling influence over it. Unity must first of all be spiritual. The ruling idea in Scripture is "one body, one Spirit, one hope, one faith, one baptism, and one God, the Father of all"; but not one pope, one polity, one historic episcopate, or one mode of baptism. Oneness cannot be produced by authority or external arrangement. It is a living fact and of spiritual creation. Yet the Church requires form of some kind through which to express its life and exercise its agency; and the practical question is whether one organization is desirable or possible. It might be both possible and desirable to plan for one Church within separate nationalities and especially within a country like Japan. The first step in this matter is to recognize and consider together frankly the obstacles to organic union. Apart from spiritual tempers, difficulties in matters of doctrine, sacraments and polity will occur. The doctrines and sacraments do not seem to present insuperable difficulties. The primitive Church had for a time, though only for a time, no formulated creed, but rested its faith on the Old Testament and the Christian tradition, mediated by the Apostles. Creeds are of practical necessity to the Church and are occasioned by the rise of heresy, by the needs of the Church in the guidance of its officers and teachers, and by the necessity at times of testing faith with reference to agreement among believers. Union might be effected if based on the body of doctrines in the Old and New Testament Scriptures and on a short symbol, sufficient for the purposes of union and the needs of the infant Church on mission fields. Protestants are agreed in general both as to the nature and number of sacraments and no very great obstacle should lie in the way here. But in reference to polity and the very troublesome question of authority, we should perhaps not get on so well. An extreme position either for or against authority tends to engender dissension and division and makes union impossible. Authority represented as inherent in a special class or order of men and unduly extended over matters external and unessential, on the one hand; and the refusal to delegate authority to a special class or order of men and to yield submission as individuals or single congregations, to the general will in conjoint, organized activity, on the other hand, are alike views too rigorous in nature to make organic union possible until they are somewhat relaxed. One side stands strongly for authority and form,

the other for spirituality and liberty; one materializes, the other idealizes the idea of union. Both represent vital truth, but both, it seems to me, err in applying it too rigorously. If all could agree—to express only a personal opinion—(1) that authority belongs to Christ and has been lodged with the Church; (2) that it may be exercised by a special order of men when conferred by Christ and authenticated by the judgement of the Church; (3) that form of some kind, though not divinely ordained, leaving out of account the sacraments of course, is a practical necessity for efficient order and administration; and (4) that the particular form assumed should be determined by the Church according to times and circumstances, under the guidance of the Holy Spirit, organic union would be less difficult to accomplish. At any rate it seems to me that the easiest path to oneness is to adhere strictly to the principles laid down by Christ in His last instructions to the Church. †

(3) In regard to the different agencies of the Church in missionary work, our present concern is with the use and relative position of each as viewed from the stand-point of our Lord's commission. As for hospitals and other benevolent agencies, there are at present 1,088 mission hospitals treating annually more than two million patients; 218 orphanages, founding asylums and homes for infants, in which are housed more than ten thousand inmates; and 90 odd homes for lepers, and 30 homes and schools for the blind and deaf. The place of institutions of this kind in mission work is secure. They are tangible proofs of the response of the Church to suffering and are sure tokens that Christ, still with outstretched arms to the afflicted, is an abiding presence in the mission movement. Pain and poverty, always and everywhere present, incite to philanthropy and afford the Church opportunity to exhibit that love whose only joy is service, whose only satisfaction is sacrifice, for others. But we desire to ask, has that stream of charity, having its origin in Christ's life on earth and in Pentecost, which has come down through the Christian ages, bringing relief to untold numbers of suffering men, sprung up in all our churches and flowed out in abundance in local communities, bringing joy and gladness to those in sorrow and misery? Is it not a fact that benevolence in our churches, as compared with early Christian communities, is sadly wanting? In primitive Christian times, every Church was a centre of systematic and spontaneous benevolent activity, in behalf of the poor, the sick, the outcast. Deacons, and perhaps deaconesses, appointed for that purpose, visited from house to house and bound many, by acts of kindness, to the Christian community. The early Christians laboured that they might be able to give to him that needeth, teaching for the first time, the true end of labour, that the reward of toil was the exercise of compassion. Widows, orphans and especially abandoned children, were objects of special care. In times of special need, general fasts were proclaimed and general collections taken, out of their savings. "Blessed is the man who fasts to feed a person," said one of the Church fathers. Men like Cyprian, Marcion and others made generous contributions in celebration of their baptism, and it was the custom to bring natural products and other gifts, at the Lord's Supper and other festival occasions. Even the bitterest enemies were cared for in time of pestilence, and the bodies of their dead buried by the Christians when no one else would touch them. The love of the Christians manifest in every community both amazed the heathen and won them over. Surely in these days, living as they did among miracles of new born souls and heaven born love, the early Christians dwelt near the open portals of the Celestial City. We believe that love and sacrifice, exercised discriminately of course, should characterize Christianity on the mission field. If the lack of it is due to the lack of spirituality or to expensive machinery in Church life, in either case the difficulties should be overcome and primitive piety restored in this respect.

† I say to the "Church," for the weight of authority favours the view that the charge was not given to the apostles specially but to believers collectively.

The case of schools is somewhat peculiar. They have come to occupy a prominent place in mission work, but not without opposition. 20,407 mission schools are reported, all but about 1,500 of which are elementary schools and kindergartens; and the total number of pupils enrolled is 1,049,378. These schools can be justified on sound principles and are in complete accord with the spiritual vocation of the Church. Yet a distinction must be drawn between training for manhood and character and training for a special vocation. Education has its starting point in the family and is continued in the school, an extension of the family. Hence, the purpose of education is to foster growth and provide for continuous growth, to discipline the faculties and supply the mind with the machinery of thought, to create right aptitudes and tastes and more especially to form character, the enduring foundation of destiny in this world and the next. Schools founded, endowed and equipped, with this aim in view, serve the primary interests of the Church. Education of this character is a spiritual process, requiring religion for its basis, its sphere, and its most important element. Schools imparting a Christian education form a social sphere, pervaded with Christian influence, in which the young become familiar with the elemental stages of the larger social life they must afterwards perfect; and such schools form an enduring home for the noblest type of culture in the possession of the race, characterized by breadth, depth, purity and inspiration. The primary aim of such institutions is not so much to discover principles of science, morality, art and sociology, as to enshrine them in heart and life. The Church, and the Church alone, is at home in this field, but when it comes to training for other vocations than the ministry, and for scientific research, mission societies should move with caution. Special conditions may warrant the establishment of schools of medicine, law, politics and applied science, but there is danger here (a) of overloading missions with financial burdens, to the disadvantage of more vital interests; (b) of awakening jealousy and suspicion through the presence of exotic centres of political and social thought and discussion; (c) of secularizing the missionary enterprises, by departing too far from the distinctly spiritual aim of the Church. We cannot go the length in this direction of a missionary secretary at the New York Conference of Missions who stated that "it is needful for the Christian missionary to consider the industries of the people amongst whom he labours. The practical truth which he teaches finds its Scriptural authority and counterpart in the Carpenter's shop at Nazareth, the fishing boats of Gennesaret, and the Corinthian home where the occupation of tent-making was carried on." After entering the ministry, if Christ had taught the use of carpenter's tools, if the Apostles had given lessons in casting the net, and if St. Paul had conducted a class of Corinthians in the art of tent-making, these examples might have been invoked as authoritative to the Christian missionary. It may be admitted, as was stated on the same occasion, that the industrial question is a burning one in Asia. So is the social, the educational, the political and every other question. Asia is becoming conscious of many needs and this consciousness may become a snare to the Church if she attempts, generously but not wisely, to supply all these needs.

The literature of Christian missions, represented by 148 publishing houses and printing presses, which issue annually about ten million copies, beside the publication of 366 magazines and periodicals, and besides the literary work of the various Bible and Tract societies, deserves a far more prominent place in missionary endeavour than it now occupies. The printed page is capable of disseminating widely the truth of the gospel because of the growth of popular education and the awakening of the intellect of the world. Improvement is necessary in quality as well as quantity. The literature of the past century, created under many difficulties, will not meet the needs of the present century. And for the best efficiency, our literature must be strictly limited in scope to Christian purposes.

Speaking at the Ecumenical Missionary Conference at New York, Mr. Timothy Richard stated that "Christian literature should compass the solution of as many problems of life as the non-Christian religions attempt to solve. Brahman, Buddhist, Confucian, Taoist, Mohammedan and less prominent religions collectively attempt, among other things, to explain the philosophy of the universe, the history of man, the Providence of God, the laws of nature and the laws of society. If Christian literature does not attempt to solve as many problems as do the non-Christian religions and does not give clearer solutions to their problems, their followers will assuredly cling to their old faiths." Again, "Christian literature should be co-extensive with the works of God." "We have an assurance from our Lord Jesus Christ Himself that the Holy Spirit would begin to guide us into all truth. Revelations of truth since John was in the isle of Patmos, are therefore sacred and divine. Modes of action in the cosmic forces, the laws governing nature and the progress of the human race, have been revealed to us in profusion during recent centuries and have enabled us to vastly extend our dominion over the earth. To call this knowledge secular or profane is not Biblical. It is even a profanity and the basest ingratitude to God. We must therefore set forth in Christian literature all discoveries concerning the works of God." And again, he says, "The extent of Christian literature should be commensurate with the needs of man." While according all praise to the splendid work for Christian literature done by the Secretary of the Society for the Diffusion of Christian Knowledge in China, we cannot but regard the task as outlined by him for Christian literature as simply monstrous. Our protest is, (a) that the statement is based on a false exegesis of Scripture; (b) that for purposes of Christian propagation there is a difference between secular and spiritual, and a missionary without profanity or base ingratitude to God may decline to include in his list of Christian publications, for example, such a treatise as a bad book on steam-boilers, or to distribute tracts on the subject of poultry farming; (c) that to attempt to solve all the problems of which non-Christian religions have attempted the solution would be following them into error; as for example, witness the condition of Buddhism to-day, perplexed in the light of advancing knowledge because the system was built up on the erroneous psychology current in Sakya's age; (d) that a large hypothetical element exists in the modern conceptions of the law of nature and society, and to teach the current notions of science as Christian may possibly hinder the progress of both science and religion, for a Christian sanction tends to fix a temporary hypothesis of science, while the discarding of hypotheses thus sanctioned tends to unsettle faith; (e) to make Christian literature co-extensive with the works of God and commensurate with the needs of man would not facilitate, but hinder the spread of it, by the magnitude of the task undertaken. The spirit of the age is apparent here in the value given to a knowledge of phenomena, but it cannot be asserted too strongly that the foundation of progress is not a knowledge of phenomena and their laws. In the defence and exposition and dissemination of the saving truths of the gospel, in the preparation of literature limited to the immediate needs of Christian work, and in doing this thoroughly and adequately, we have a task sufficient to tax our utmost capacities.

A curious result of foreign missions in the past century is the small number of churches founded, as compared with institutions of learning. Intellectual interest will not account for the fact that there are more higher grade schools of various kinds in Japan than self-supporting churches. The same is true in China. The ratio between Protestant mission schools of secondary and higher grades and of various kinds, to organized churches, throughout the world, is about one to seven, whereas the same grade and kinds of schools under Protestant denominations in the United States have the ratio to organized churches of one to one hundred. It seems to me the present century ought to remedy this disproportion. We need not have fewer schools, but more churches. A marked feature of early Apostolic

preaching was the rapid increase of churches. They soon existed in Judea, Galilee and Syria, and Paul organized them in a number of cities during his first short missionary tour. The first great missionary of the Church deserves no less distinction as a founder of churches than as a founder of Christian theology. They weighed on him as a daily care, and to them he imparted not only the Word of the Gospel but his very soul; for he regarded them as the pillar and stay of truth, the dwelling place of the living God. A mighty impulse to found and build up such churches was given to the Apostles, after their minds were purged of the secular alloy apparent in their conception of the Messianic Kingdom, even on the occasion of Christ's last conversation with them; and after they came to see that the Israel of prophecy was a spiritual commonwealth of surpassing glory of which the old was but a shadowy outline. Pentecost swept away from their minds worldly notions of the character and aim of the Christian Church, and, it may be that the same stupendous blessing is needed in our days, when earthly well-being is the ruling conception in so many minds. If the last century was one of schools and hospitals, let this one be a century of churches. Hospitals are for the sick, schools are for the young, but churches are for all; and we desire to see a church in every community, there to stand as a pillar of testimony for Christ and a monument of His work; as an organized centre for soul-saving and benevolent activity; as a school for virtue and piety; as a home for the friendless and lonely; as a brotherhood for mutual resistance to evil and misfortune; as a fortress for the defence and preservation of truth; and as a living body, instinct and radiant with the life and love and tenderness of its great Head, Christ Jesus, the Saviour. The Church must be made the centre of all mission enterprise and every form of work an adjunctive ministry to its needs and interests. The Church, though not necessary for the being, is absolutely necessary for the well-being of a Christian. It does not create, but conditions the growth of spiritual life, affording fellowship, worship and religious instruction; and in its visible aspect it is doubly important in non-Christian society. Opinions will differ as to the cause of the slow growth of churches. A missionary of long experience said to me some time ago that paid native agency is the greatest blunder of modern missions. If a blunder, it certainly is a great one, for in Japan, for instance, there are 71 churches paying their pastor's salary in full; yet there are 306 ordained and 518 unordained native ministers and workers, and 98 theological students, making a total of 922, all but 71 of whom are wholly or partially dependent on foreign aid.[¶] We have gone far in advance of the financial capacity, or at least the financial attainment, of the native churches and provided pastoral instruction for them. Has this been a blunder? Many good men think so. Evils have no doubt attended this policy, but on the whole we believe it to be the correct one. Every human good, every commodity, every invention, every work of art and literature, has had to depend on patronage at first, has had to be kept before the people at a pecuniary loss, until they see that it is good, and come to demand it. The Christian evangel, the highest of all goods, forms no exception to this rule. We may teach, exhort and threaten and resort to all kinds of artificial means, to stimulate self-support, but the final solution of the question does not lie in that direction. Not by getting those already in the churches to give more, but by getting more into the churches able to give, is the path to success. Our mistake, if anywhere, has been in imposing the wealth of forms and the expensive machinery of the home churches upon the infant churches, and in expecting them to measure up to the financial requirements. The recent forward movement in Japan has made the service of the army of workers trained and supported these many years, invaluable to the Church, and almost indispensable in caring for the large numbers of souls seeking light and instruction. After a great ingathering of souls, of which we have the promise,

[¶] Some of the above number may possibly be supported by the mission societies of the native churches.

takes place, expenses can be easily provided. The self-support problem belongs to the time of sowing. After harvest time comes, it ceases to exist.

As to the various agencies discussed, philanthropic, educational, literary and evangelistic, those who would reduce foreign missions to a single form of activity do not seem to have the mind of the Spirit, whose operations in the early Church, for example, were through divers gifts and ministrations. But the errors of the Corinthian Christians should be avoided; who attached too great value to the various instrumentalities as such and who allowed the diversity of gifts and offices to lead to schism and rivalry in the body of Christ. They had forgotten for the time that all forms of activity were nothing, unless united and energized by the Holy Spirit and subordinated to love.

It is also important in respect to our institutions to keep clear in our minds the relations between Christianity and civilization. Though the greatest civilizing force in history, Christianity should not be looked upon as a purveyor of civilization. By enforcing the obligation and showing the direction and end of human progress, by grappling with sin, the greatest obstacle to advance, by imparting inspiration and hope and quickening talents and faculties, and by steadfast testifying that the ground of progress is not soil, not climate, not knowledge, not legislation, but moral vigour, right relation in heart and life to man and God, Christianity ministers to the growth of civilization. Our greatest contribution to the progress of man can be made by following the example of the Hebrew prophets whose burning messages compelled their age to associate outward life with heart conditions, social and political vocations with righteousness and benevolence and accountability to God.

This leads to the idea of development, a characteristic idea of the age which has been applied to everything and to all religions, including Christianity. The conception of development as a uniform advance, through ages of struggle and according to definite laws and through determinate stages, can not be applied in that rigorous form to the Christian religion, though it is clear, from the parables of Christ given in terms of life and growth, that the conception of development is not foreign to Christianity itself. The danger is in obscuring what we may call the cataclysmic element in our religion. Genesis must come before growth, creation must precede development. A Christian man is God's workmanship created unto, but not by, good works. In what concerns social readjustment in accordance with Christian principles, the incorporation of Christian ideals into art and culture, theological insight into the facts and principles of redemption and the shaping of the organic life of the Church into new national or racial types, time is an important element, and a gradual advance is to be expected. But in respect to mighty innovations like the new birth and Pentecostal out-pourings, "the evangelization of the world in this generation" is not a vain or visionary cry.

(4) We have briefly discussed foreign mission work in its various relationships and agencies, from the point of view of Christ's commission. Let us now measure ourselves, as missionaries, by the same standard and determine, if possible, the principal grounds of our success and efficiency. Presupposing a finished education and habit of study, there only two qualifications out of the ten thousand or more indicated in recent years as necessary to the missionary, to which number men of the world as well as the Church have made contribution—there are only two qualifications we desire to mention, both of which grow out of the commission and both of which overshadow all others in importance. We refer to Scriptural knowledge and spiritual power. His mastery of the Scriptures is the missionary's measure of success

[¶] And it ministers to the growth of civilization because the Kingdom of God as revealed in promise to the patriarchs, in vision to the prophets, and in growing reality to us, is the final cause of all history, the direct justification of all suffering and striving for the good and true, and the only fact which affords the race a hope of escape from final catastrophe.

and efficiency. The Sacred Word alone contains the truth which suffices for the uses of his vocation and his own spiritual life. The application of no other word can arouse conscience and unlock the secret chambers of the religious nature. No other image than the one delineated in Scripture can satisfy the moral and religious cravings of humanity and in no other volume can be found so clearly pictured the rise and onward course of the spiritual life, in all its stages, difficulties and temptations. No other book can bring into such definiteness the incoherent and indeterminate promptings of religious experience; nor is there a record in existence which makes so clear the distinction between good and evil, a distinction as lasting as the universe and as deep as God. Only by dwelling within the broad truths and principles of the Sacred Book can a missionary keep his own life from sinking down to the narrowness of spiritual egotism or avoid the error of preaching, for the sublime and universal experiences of the Gospel, his own transient moods and fitful passions. Nothing should be allowed to deprive the Bible of its central position in the studies of the missionary and in all the agencies of missionary work. And critical, as well as devotional study, of the Scriptures is necessary. Bound up in the foreign languages of ancient times and the social conditions of different and unfamiliar ages, the truth of Scripture cannot become wholly intelligible or its permanent principles be distinguished from their transient embodiment, without patient and critical study. The second condition of missionary success is spirituality. The missionary must be a man of God. He must know what he desires to teach and possess the feelings of reverence and devotion which he wishes to inspire. Live coals, not dead ones, kindle others. Without a deep experience, he will be incapable of eloquent appeal, for the power of speech is in the heart. He must pray always, for by prayer he confesses that God is essential, for only by hovering near the Infinite can his mind see things in their true proportions and keep in view the greatness of the task, the grandeur of the aim, the nobleness and freedom from all artifice of the means, involved in the enterprise ordained of God for the conversion of the race. As a member of the Church, like all other members, he participates in its spirit, but must do more; he must sum up and represent in a peculiar way the spirit of the Church to those without its pale. He must translate and embody not only the sympathy, prayers and kindly feelings of the great body of believers; he must also stand as an exponent of God's love to men, as a witness of the infinite longings of the Great Father in heaven, for the return of wayward souls to His fellowship. Hence, the missionary's spiritual earnestness must be intense, his heart must be generous and sympathetic and his life holy. Otherwise he may efface the gracious message he has come to express for the Church and for God.

The programme for foreign mission outlined in this paper may appear narrow to some. But we trust that it is the narrowness of depth and concentration, and hence of effectiveness and power.

CORRESPONDENCE.

THE HOUSE TAX AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It would seem that, unless some one who knows what is being done within diplomatic circles speaks (and this is not likely), not much more light can be got on this unhappy question. There is, however, one point in your editorial of the 11th which ought to be noticed, because if left in its present form it is quite likely to mislead. You say, "it must always be remembered that the foreign land-holders did not acquire any right of property in the land. They became simply perpetual lessees, and as such had to pay a rent." Upon this you go on to compare the rent one would have to pay for land outside the settlements with the 28 *sen* per *tsubo* paid by the settlement holders, showing that on land worth 50 *yen* per *tsubo* the renter would have to pay the owner of the land 6 *yen* a year, while the perpetual leaseholder would have to pay on the same land, if in the settlement, only a rent of 28 *sen* a year. The impression is left that

while the settlement land pays a rent of only 28 *sen* a *tsubo* other similar land pays as much as 6 *yen* a *tsubo*, and that this rental is what the Government realizes from both sources. Such a representation as this you surely did not intend to make; and yet unless this be the purport of the argument, there is no force whatever in it. I am persuaded that the majority of leaseholders have not attempted to unravel the tangled thread of this question. Confusion will surely arise when a technical difference is made between a perpetual lease and a "right of property" title. By the impression your remarks leave the former pays into the treasury only 28 *sen* *tsubo* annually, while the latter, of equal value, pays 6 *yen* a *tsubo* annually. It seems to me that you ought to have stated (keeping up the point of rental dues) that the former pays the Government 28 *sen* a *tsubo* annually while the latter pays not a *sen*. For certainly, you must know that not a *sen* of the 6 *yen* rent you speak of goes into the Imperial treasury. It goes to the owner of the land, who does not pay to the Imperial Government as much as 28 *sen* a *tsubo* taxes. So simple a matter, of course, will cause no confusion or misunderstanding in the minds of those who have looked into the matter. But all have not done this.

Again, the title leaseholders have acquired to the land may not have been acquired in the regular manner. But it is a "right of property" in every essential force of law, even more real than the tenure of land of Japanese citizens. Moreover, I am of the opinion, too, that the leaseholders have, in general, paid far more to the Government for their land than Japanese citizens have paid the Government for theirs. And in theory, also, Japanese subjects are only renters from the Government. You must know that at this late day there are vast tracts of land in Japan farmed out to citizens on which nothing has been paid, and nothing is paid but the taxes; and also that in the early times of a nation deeds to land are granted free to settlers. Whatever may have been the case with part of the settlement lands in Japan, it was not the plan to bestow it free, nor was it at all to be expected, nor would it have been exactly just to the people of the nation to have given it free, as Japanese citizens received their early titles in land. Foreigners should expect nothing of the kind. But just now what these few foreign leaseholders do wish is that some regulations should be made that will place their taxes on a par with that of the rest of the nation. I am sure neither side would like anything else; for that foreigners should dwell within the nation and be subjected to excessive taxation, is certainly repulsive to the sense of courtesy which this nation has no reason to be ashamed of.

Very sincerely,
Dec. 16th, 1901.

E. SNODGRASS.

THE MEGURO LEPER HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the editorial columns of the *Japan Mail* for Dec. 13th, occurs the following:—"The leper hospital at Meguro is administered by a Japanese gentleman and his wife who have devoted their lives to this cause, just as Father Testeide did and as Father Bertrand is doing, and the hospital is supported almost entirely by Japanese subscriptions."

Through a misunderstanding of what your correspondent of December 12th wrote, and not giving sufficient weight to his words, "though there is a committee behind the scenes," the last clause of the above sentence is incorrect.

The fact is that Meguro Hospital is almost entirely supported by money received from the Leper Mission Trust Association, an undenominational British Society. I make this correction merely in justice to the above Association, and not at all to intimate that Japanese fall behind others in caring for the poor and afflicted. I have hesitated even to make the correction, lest it might be misunderstood.

Yours sincerely,
M. N. WYCKOFF,
Chairman of the Hospital Committee.
Tokyo, Dec. 20th, 1901.

THE SENDAI INCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A sensational article appeared in a number of the English papers a few weeks ago about a missionary employing a new method of introducing Christianity by knocking the head of a Japanese child with a bible. The account was so untrue, and is calculated to do so much damage to the particular missionary, and the good work of missions in general, that simple justice demands that the true story be told by an eyewitness. Mr. S. S. Snyder, of Sendai, is a very earnest and hard-working missionary; he is very successful in selling bibles to the Japanese on the street, railroad trains, and anywhere where an opportunity is offered. The particular case in which he was reported to have

struck a child with a bible, he was on the street in Sendai preaching.

A crowd gathered about him while he discoursed about the benefits to be derived from the bible he was selling. A small Japanese child, about five years of age, was in the crowd, and was thrown down, not by Mr. Snyder striking her upon the head with a bible, but by the crowd that jostled her.

A nose bled, caused by the fall, and the cry that the foreigner had hit the child caused some excitement, and greatly incensed the father of the child. You will do only simple justice to Mr. Snyder by printing this true account as given by a truthful and trustworthy eyewitness.

Yours,
Tokyo, Dec. 23rd, 1901.

VERITAS.

MORMONISM.—A REPLY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. Grant's communication of the 12th inst. shows that he is an adept in the art of billingsgate. He is so proficient in that vocabulary I am more than content to leave that phase of this discussion to him.

At the outset, I want to protest, most vigorously, against the construction he has placed upon the sentence,—“In one or two instances, I believe, this heroic treatment,—tarring and feathering,—was used.” He writes “your correspondent approves of tarring and feathering.” I emphatically deny the accusation. The words “heroic treatment” convey no such inference. They were used in the development of the thought that the patience of the American people, with the Mormons, was almost exhausted. In illustration of this, I gave the fact that, already, in some sections, the people were protesting, in a vigorous way against their methods and their teachings, even, in some localities, expelling them and, in one or two instances, even using the “heroic treatment” of tarring and feathering those who would not leave. This statement is construed as approval of what was done. The Standard Dictionary gives “resolute” as one of the meanings of the word heroic. It was in the sense of “resolute,” or determined, that I used it. I simply made a bare statement of fact containing neither approval, nor condemnation. Personally, I do most heartily condemn such lawless methods of getting rid of an evil. Those who engage in them, no matter against whom, should be punished to the limit of the law.

But we must not allow Mr. Grant to lead us off to a mere side issue. This he evidently sought to do. Whether I believe in tarring and feathering, or not, let us keep to the main contention. The fact remains that the American people, in various sections, are protesting in a vigorous way against “the Mormon Invasion.” Why is this? The Mormons have caused trouble in the United States and are even now causing trouble here and there. The National Congress has had to deal with them, legislating against the practice of one of their distinctive doctrines, that of polygamous marriage, and, notwithstanding this, many of their leading men—how many of them “seventies, elders and priests,” no one can tell, still have plural wives. Why! one of them, a man named Roberts, had the bare-faced effrontery only two years ago, to present himself at the doors of Congress; sent there by Mormon votes, a man with two wives!! They seated him and then expelled him. This is not ancient history, since it occurred at the last Congress. Of course Mr. Grant will seek to quibble over this incident, but the fact remains that the U. S. Congress believed the evidence produced that Roberts had two wives and on the strength of it expelled him.

In view of the facts that the United States Congress has had to legislate against Mormonism, on the grounds of public decency and the preservation of the moral life of the people, and in view of the fact that various localities are finding Mormon priests and elders such undesirable citizens that they are rising up against them and expelling them, it seems to me the Japanese Government would commit a very serious error should they grant permission to Mormon missionaries to propagate their creed in the country, an error that they would deeply regret in later years.

Mr. Grant says that none of their missionaries receive any compensation for their services. I had supposed as much. While in the United States, over two years ago, I got on the track of some of these missionaries and I found, from the way they lived off of the people, they needed no compensation. Their habit is to stop with the people until they “wear their welcome out” and then move on. I have the copy of a letter in my possession from one poor fellow who tells of how two Mormon missionaries asked permission to stop with him and did so until they about “ate him out of house and home,” remaining six months, or more. I suppose Mr. Grant and his associates propose a similar plan of operations in Japan, should they be permitted to propagate their creed.

A word to Mr. Snodgrass, in conclusion. He seems to have a penchant for picking flaws in others. He thinks I am un-American in some of my sentiments. That is a private matter and I will not defend myself in the columns of a public newspaper. Allow me to say, in passing, that whether I am American, or un-American in my sentiments, I have never had the experience of being refused a passport by the United States Minister.

He objects to my statement that "America carries its principles of liberty to an absurd extent. As witness the liberty of speech granted anarchists and the terrible fruitage it has borne in the assassination of President McKinley." This statement is, in his opinion, "just about as wide of the mark as it can be." He says that "since the beginning of the American nation, now 125 years, there has been but one anarchist murder!" Mr. Snodgrass has forgotten some history. Let me refresh his memory. On "the Haymarket," in Chicago, there stands a noble monument dedicated to the memory of six or seven brave officers of the law, who were murdered, and of forty, or more, who were injured by a bomb, thrown by an Anarchist; one of a party;—the leader of which was Albert R. Parsons, of Alabama, an American citizen. From a paper received just this week, I copy these words:—

"The Anarchists.—On the evening of May 4, 1886, several hundred persons gathered in the neighbourhood of Haymarket Square, Chicago, and were addressed by a number of speakers in the interest of labour. Believing that the meeting would end in a riot, the police ordered the crowd to disperse. Some one threw a bomb at the officers, which, exploding, killed and wounded several. A mob was then formed, and a general fight took place. The ringleaders of the mob were a band of anarchists, mostly of foreign birth. Four of them were hanged. The workmen of Chicago denounced the anarchists as enemies of labour."

Parsons, the American, and three others were hung and four or five were sentenced to the penitentiary,—not for murder, for none of them were accused of throwing the fatal bomb, but for the anarchist deeds and utterances which incited the murder. I was in Chicago at the time of the trial and am quite certain of my facts.

I had this incident in mind, and also the annual celebrations of the Anarchists at the graves of Parsons, *et al*, the wild ravings of his wife, as an incident of these gatherings, the congratulatory meeting of the Anarchists, at Patterson, N.J., over the murder of King Humbert, the incendiary utterances of Most, the German editor, and of Emma Goldman,—these and other similar things were in my mind when I penned the statement that Americans carry liberty of speech to an absurd extent. It was a speech of Miss Goldman that incited the assassin of President McKinley to do his deadly work.

Mr. Snodgrass doesn't think that "American liberty is the kind of soil in which these evil weeds—foreign weeds—grow." Has he forgotten that the assassin of the King of Italy went from the state of New Jersey to do his deadly work? That he was selected by Anarchists in America "to knock over" the ruler of Italy, as he carelessly terms the crime of regicide?

My contention is not that Anarchy is an American product, nor that the leaders, or teachers, of Anarchy are Americans,—the very name of President McKinley's assassin Cologozo, and the names of those engaged in its propagation, as Isaaks, Pfeutzer, Hippolyte, Havel, Travaglio, Schnider, Mechame, Maggio, &c., all betray, in bold type, a foreign origin; but I do contend that the foolish extent to which liberty of speech is permitted in the United States is the responsible cause for the assassination of President McKinley and is making "the land of the free and the home of the brave" a regular hot-bed for the propagation of Anarchism.

The following from an American paper is the published creed of anarchism:—

"I believe in no God; I believe in no hereafter; I believe in no civilization; I believe in no marriage. All property is robbery, all government is tyranny. Right and wrong are mere prejudices. I believe in the red flag of anarchy. The rich and the rulers are the proper food for gunpowder and dynamite. I am sworn to live and die by the articles of this creed."

Mr. Snodgrass would "make the public preaching" of such a creed a "misdemeanour,"—a sort of trivial offence,—I would class it as a felony, punishable with a term in the penitentiary, or banishment from the country.

AN AMERICAN FRIEND OF JAPAN.

Mr. E. G. Hillier, Manager at Peking of the Hongkong and Shanghai Banking Corporation, has been appointed British Representative on the Commission for the arrangement of the payment of the indemnity, and is expected at Shanghai immediately.

LAW CASES.

The hearing was resumed on Thursday in the Kobe Chiho Saibansho of an action brought by Mr. J. C. Hall, the administrator of the estate of the late Mr. A. C. Sim, against Mr. Mihara, for the recovery of yen 500 paid by Mr. Sim as bargain-money on a contract for the purchase of a certain piece of land at Suma. It will be remembered that at the first hearing counsel for the defence raised a demurrer, upon which an adverse interlocutory judgment was given. Counsel were heard on Thursday and the case was adjourned. Judgment will probably be given on Dec. 26th.

In the Kobe Chiho Saibansho on Thursday before Judge Shimoyama, presiding, and two other judges, the hearing took place of an action brought by Mr. Nagata Sanjuro, a shipbuilder at Shin-Sumiyamachi, Osaka, against Mr. W. S. Taylor, the representative of Messrs. Taylor, Cooper & Co., Kobe, claiming damages to the amount of yen 39,200 for breach of contract. The petition stated that on the 8th February last the plaintiff contracted to charter to the defendant the steamer No. 2 *Nakata Maru*. The term of the charter was to the 15th February, 1902, at the rate of yen 6,000 per month, payable in advance half-monthly. It was agreed that on failure of payment the plaintiff should withdraw the steamer and make a claim in accordance with the charter-party, and that any dispute arising out of the contract should be decided by arbitration, an umpire to be appointed by the arbitrators selected by the contracting parties. On the 5th August last the plaintiff demanded payment of the charter-money for the first half of that month, but the defendant failed to comply with the demand. In consequence the plaintiff withdrew the steamer, and landed the purser and some articles belonging to the defendant, and at the same time put in a claim for payment of the charter-money for six months and a half, amounting to yen 39,200. The defendant contended that the vessel was not seaworthy and was not as described in the charter party. Some discussion arose as to whether the conditions in the charter party providing for arbitration had been complied with and eventually the case was adjourned.

In the Yokohama Chiho Saibansho on Monday afternoon, before Judge Yasuda, was heard the case of Mr. T. B. Glover, executor of the will of the late Mr. Thomas Walsh, adjourned from the 27th of November. Mr. Masujima appeared for the executor.

The points involved were technical and very complicated, but will be given when the decision of the Court is announced.

CHARTERED BANK v. AH LENG & Co.

Judgment was delivered in the Yokohama Chiho Saibansho by Judge Kano on Tuesday morning in the case of the Chartered Bank of India, Australia and China, No. 58, Yokohama, against Ah Leng & Co., Chinese tailors at No. 12, Yokohama, claiming payment of two cheques, one of £200 and the other of £118.95 5d., a total of £318 95 5d. Defendant was ordered to pay the plaintiffs the sum claimed with six per cent. interest per annum from the 22nd of November this year until the execution of judgment, costs of the case to be borne by defendant.

TABEI v. SALE.

In the Yokohama Chiho Saibansho on Tuesday afternoon, before Judge Kano, a suit brought by Mr. Tabei, No. 13, Ichome, Otamachi, Yokohama, against Messrs. Sale & Co., Limited, Yokohama, adjourned from Dec. 5th, was resumed. Plaintiff was represented by Mr. Kuwada and defendants by Mr. Sato.

Plaintiff claimed from defendants delivery of four boxes flannel in exchange for payment of yen 179.17, the goods being the remaining portion awaiting completion of a transaction.

Counsel for plaintiff stated that Mr. Ano Sen-kichi, who was expected to appear as witness in the present hearing, was the *banto* of Sale & Co.

Counsel for defendants urged that Mr. Ano did not represent the foreign firm with respect to

the transaction in the case: in other words the transaction as to the remaining four boxes of flannel had been carried out between plaintiff and Mr. Ano. Mr. Asano Juta was called as a witness.

In response to inquiries from the bench, the witness stated that he now lives at No. 10, Aioicho, Yokohama, that he was employed by Mr. Ano from about 1890 to the end of February this year at a monthly salary of yen 50, that Mr. Ano had carried on his business (mostly in woollen cloth) independently, though he had his offices in the premises of Sale & Co., that on the 18th of October this year he, by order of Mr. Ano, visited and received from plaintiff the sum of yen 2,100 on the understanding that the money was not intended for the delivery of the four boxes, but that it would be converted into the form of a loan due to Mr. Ano, and that he had taken part in the transaction referred to.

Counsel for plaintiff said that on July 10th this year a dispute took place between the son of plaintiff and Mr. Charles, the head of Sale & Co. relative to the case and Mr. Asano interfered in the dispute for the purpose of mediation.

Counsel for defendants said the dispute was due to the fact that the son of plaintiff attended the offices of Sale & Co. on that day in compliance with a note sent by Sale & Co. to plaintiff in connection with the affair. Next Mr. Ano was called as witness.

He stated that he now resides at No. 90, Aioicho, Yokohama, that from 1890 to the end of February this year he had offices at Sale & Co., and that he had no right to sign transactions done by Sale & Co. themselves. Finally he stated that the sum of yen 2,100 received from plaintiff was on behalf of Sale & Co., and not for himself as a middle-man in the transaction referred to. Counsel for plaintiffs begged that Mr. Asano should again be summoned as a witness at the next hearing in order to examine the documents that passed between the two parties. Proceedings were adjourned until the 6th of February next year.

SMITH VERSUS SMITH.

In the Yokohama Chiho Saibansho on Tuesday afternoon, before Judge Kano, was heard an action brought by Dr. Gillmore Smith, late of No. 66, Yokohama, against Mrs. Ida Smith, praying that divorce be granted against the latter. Mr. Masujima appeared for plaintiff and Mr. Akiyama for defendant.

Counsel for plaintiff said that his client was a native of the United States and now resides in Yokohama. The marriage between the parties took place on the 11th of November, 1893. On the 2nd of November, 1896, defendant, obtaining plaintiff's consent, left Yokohama for California.

On the 2nd of June, 1898, plaintiff sent a note to defendant asking her to return to Yokohama, and it appears that the note was duly received by defendant on the 2nd of July the same year, for plaintiff received a reply from defendant, who acknowledged plaintiff's letter.

Counsel for defendant contended that his client had already filed a suit in a local court in California for divorce on the 2nd of September, 1898, and judgment was announced in favour of his client, who was consequently entitled to claim from plaintiff an allowance and partition of property, etc.

The case was continued until the 13th of February next.

HALL v. HALL.

In the Yokohama Chiho Saibansho on Thursday afternoon, before Judge Kano, the hearing was resumed of the suit, adjourned from Nov. 27th, brought by Mrs. Mary E. Hall in Yokohama, against Dr. C. H. H. Hall, her husband, praying that the latter be ordered to pay plaintiff yen 5,000 and a monthly allowance of yen 100 as well as hand over to her 45 shares in the Grand Hotel Co., Ltd., should plaintiff agree to a divorce.

Mr. G. Akiyama appeared for plaintiff and Mr. R. Masujima for defendant.

A Japanese woman named Nagasawa Sawa was first examined as a witness, and said that she now lived at No. 87, in the former Settlement, that she was an amah in the service of plaintiff, by

whom she was employed in May this year. Plaintiff was now supporting herself giving by lessons in French at her house. Plaintiff has at present about 20 pupils, including 12 children, who pay monthly fees of yen 3 each, and two adults who pay yen 5 each and 8 others who pay yen 10 each. According to past experience there was a larger number of pupils during the cold season and less in the summer. Plaintiff was now paying house rent of yen 35, but witness did not know what the plaintiff expended on her household affairs.

Prof. H. T. Terry, of the Imperial University, was called as a witness. Through Mr. de Becker, who acted as interpreter, the witness replied to questions from the bench. He said there were two points which might become causes for a divorce: first, in case a wife acts against the wishes of her husband in such a manner as to disregard the law, provided that they are living separately; and secondly, in case a wife goes on living separately after having violated the law. The witness, however, remarked that it was very difficult to make any definite reply in a general way unless a certain particular subject was presented to him. The judge then asked witness questions regarding a husband's rights under the law of Illinois, U.S.A., the parties concerned being Americans. Could a husband in that state compel his wife to co-habit with him when the wife was living apart?

To this, witness replied that no provision for legal proceedings to be taken under those circumstances had been enacted, but a husband, if he liked, might move indirectly. Further there are two grounds which may become cause for divorce, namely, a separation for over two years or frequent cruel treatment. At the instance of Mr. Akiyama, the Court asked witness what method might be adopted in deciding the amount of alimony claimed by plaintiff, when the defendant's income varied from month to month. The reply was that in such an instance the point was settled by the Court, provided that careful investigations were first made.

Proceedings were adjourned until the 28th of January next.

GARDENERS' ASSOCIATION v. CLARKE AND OTHERS.

An action brought by the Yokohama Uyeiki Kaisha (Gardeners' Association) against Mr. E. Clarke and others of Yokohama, claiming payment of yen 365.35, which was expected to come up for hearing on Thursday afternoon, has been postponed indefinitely.

NEWS OF THE WEEK.

Increasing lawlessness is reported to prevail in Ireland.

The Hon. H. E. Pollock, K.C., late Acting Attorney-General at Hongkong, left there on the 12th for his new post in Fiji.

We are requested to state that Mrs. Buck's weekly receptions will be discontinued until Tuesday, January the 7th.

A case of bankruptcy is reported in London newspapers where the liabilities amounted to £2,158 and the assets to two-pence.

M. Jules Verne, the famous French novelist, is to undergo an operation for cataract; the specialists are hopeful of restoring his sight.

Sir Thomas Jackson has received a telegram intimating that his son, Lieutenant Jackson, of the 1st King's Own (Royal Lancaster Regiment) has been promoted to the rank of Captain.

The English four won the International Challenge Cup at the Victoria Regatta at Hongkong on the 12th. The Portuguese four was second and the Scots third.

Vernacular papers report that a German sailor, named Meier, aged 27 years, was arrested on Friday for stealing a bottle of whisky from a wine-shop kept by Kawaguchi Matazo at No. 16, Nichome, Onoye-cho, Yokohama. Meier also, it is alleged,

kicked a policeman and so injured his right foot that he will be forced to retire from work for three weeks. The sailor was immediately sent to the Procurator's Office.

The revenue of the Orange River Colony already exceeds the expenses of administration. This is a healthy sign.

The populace of Lisbon stoned 16 members of French religious orders, who thereupon re-embarked on a vessel.

The Report of the Peninsular and Oriental Steam Navigation Company recommends a dividend of 6½ per cent. on the deferred shares.

A London telegram of Dec. 21st said:—The United States promises neutrality in the event of Germany seizing Laguayra which is the port of Caracas, the capital of Venezuela.

Cable Company stocks were reported in London on Dec. 20th to be depressed in consequence of Signor Marconi's successful experiments in transmitting signals across the Atlantic.

Dr. Symons, medical health officer of Bath, in Somersetshire, has published a return showing that the mortality among infants for the summer quarter in Birkenhead, Salford, and Manchester was greater than that in the concentration camps in South Africa, which has been the subject of so much pro-Boer comment.

Rear-Admiral Grenfell, C.M.G., R.N., and his staff, accompanied by His Excellency Sir Claude McDonald, British Minister to Japan, proceeded to the Imperial Palace on the morning of Dec. 19th and were received in audience by the Emperor in the Phoenix Hall; after which they had audience of the Empress.

The Naval Authorities have decided to construct five torpedo boats each having an aggregate tonnage of 150 tons, their names and places of construction being as follows:—

<i>Sagi</i> (Heron)	To be built at Kure.
<i>Usura</i> (Quail)	" "
<i>Kamome</i> (Sea-gull) ...	" "
<i>Hashitaka</i> (Sparrow-hawk)	At Kawasaki Ship-building Yard.
<i>Otori</i> (Stork)	" "

There are indications that the import of salted salmon from British Columbia is steadily increasing. The total quantity prepared for exportation to Japan this year is reported to have reached something like \$6,000,000 in value. The following table shows the imports during three years:—

	Boxes.	Dollars.
1897	3,911	11,733
1898	4,638	23,106
1899	5,158	123,949

The war-ships now under construction in England for the Japanese Navy in connection with the Naval expansion programme will be finished during the course of the present fiscal year (1901-2) and brought home. According to the *Jiji*, the names of the vessels and the commissioners ordered to bring them home are as follows:

First-class battleship	<i>Mikasa</i> , Captain Hayazaki.
Torpedo-boat destroyer....	<i>Shirakumo</i> , Com. Hazama.
"	<i>Asashio</i> , Com. Horiuchi.
"	<i>Akibono</i> , Com. Nakayama.
"	<i>Kasumi</i> , Com. Oshima.

At the semi-annual general meeting of shareholders of the Odawara Electric Railway Company held on Dec. 25th, the following accounts were presented and passed:—

	Yen.
Net profit	23,329
Brought over from previous account.....	571
Total	23,710
To reserve	1,167
Reward to former officials	800
Bonus	2,333
Dividend (5½ per cent. per annum).....	19,250
Carried to next account	160

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

THE RAND RESUMING WORK.

London, Dec. 19.

The Johannesburg Stock Exchange has been opened.

The Delagoa Railway line has been opened for civil traffic.

AMERICAN TARIFF ON TEAS.

The *Morning Post* says that the Washington Administration will probably ask Congress to remove the duties from Chinese teas of the commoner sorts.

PRO-BOER MEETING AT BIRMINGHAM.

Mr. Lloyd-George, M.P., was compelled to abandon a speech at a pro-Boer meeting held at the Birmingham Town-hall. An immense crowd broke all the windows. The police charged and many were injured. Mr. Lloyd-George escaped disguised as a policeman.

AUSTRALIAN CUSTOMS AND AN N.D.L. STEAMER.

London, Dec. 20.

The Captain of the N.D.L. steamer *Neckar* has been fined £25 at Fremantle, Australia, for contravening the new Customs law by breaking, while voyaging between Australian ports, seals placed on the ships' stores by Customs officials. The fine being unpaid he was committed to prison until the penalty is paid.

TROOPS FOR SOUTH AFRICA

Six more militia battalions have been embodied.

Two thousand Yeomanry have been raised and ordered to be dispatched to the Cape in January and February.

TRIAL OF SCHEEPERS.

London, Dec. 20.

The trial of Commandant Scheepers has begun at Graaf Reinet. Thirty charges of murder, arson, train-wrecking and cruelty to prisoners are brought against him in the indictment.

ASQUITH SUPPORTS ROSEBERY.

The Rt. Hon. Henry Asquith, M.P., speaking at Wolverhampton, said that he unreservedly endorsed Lord Rosebery's attitude.

CAPTURE OF BOERS.

The capture of Boers continues daily.

MARQUIS ITO.

Dec. 21.

Marquis Ito has arrived in Brussels.

THE UGANDA RAILWAY.

The rails of the Uganda Railway have been laid as far as Victoria Nyanza.

THE "NECKAR" CASE.

Dec. 22.

The Captain of the Neckar has been released, the agents having given bonds to pay the fine and the costs.

MORE FIGHTING.

General Dartwell engaged De Wet near Langburg. There was three hours fighting and De Wet was driven off.

THE FRENCH INDEMNITY LOAN.

London, Dec. 23.

The French China Indemnity Loan has been covered twenty-four times over.

SOUTH AFRICA.

Two hundred burghers at Standerton have joined the National Scouts.

ARGENTINE AND CHILI.

War is expected between Argentine and Chili over the boundary dispute.

COLONIAL REINFORCEMENTS.

London, Dec. 23.

The Australian Federal Government has decided to send a contingent of one thousand men to the Cape.

THE WAR TO CONTINUE.

The *Daily News* correspondent at Volksrust says that the Boers are apparently resolved to continue the war, and that the real object of the recent meetings was to make plans for a summer campaign.

RENEWED BOER ACTIVITY.

London, Dec. 24.

Lord Kitchener reports that 200 of Spence's troops, divided into parties, were searching farms, beginning with der Lyn's, in the Transvaal, when a portion were overwhelmed by a body of 300 Boers. The casualties were severe.

Demant was dangerously wounded in the fight at Tafelkop, in Orange River Colony, on December 20. The British lost two officers and 20 men killed, and four officers and 17 men wounded. Rimington arrived and pursued the enemy, who left six dead and admit burying 27.

Muller attacked Colonel Park in the Calstroom district, but was repulsed, leaving eight killed and three wounded. The British casualties were 31, including six officers wounded.

Dewet, with 300 followers, attacked General Dartwell in the Bethlehem district, the fight lasting for several hours. The enemy charged within 150 yards, but were repulsed, the British loss being 13.

THE HESSE AFFAIR.

Later.

A decree of divorce has been pronounced against the Grand Duke of Hesse on the ground of absolute incompatibility of temper.

A LAAGER ATTACKED.

Mackenzie attacked a laager in the Carolina district at dawn on the 19th, killing six Boers and capturing sixteen.

MARQUIS ITO.

Dec. 25.

Marquis Ito has arrived in London.

MORE CAPTURES.

Colonels Colenbrander and Steele surprised laagers in the Pietersburg district, capturing sixty-two and thirty-two respectively.

MARQUIS ITO IN ENGLAND.

Dec. 26.

The *Times* has a laudatory article on Marquis Ito. It has also a long special article recounting his career.

DEMANT'S CASUALTIES.

Demant's casualties at Tafelkop on Dec. 20th were 3 officers and 29 men killed and 5 officers and 35 men wounded.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, Dec. 24.

The loan has been covered 24 times over in Paris.

The relations between Chili and the Argentine Republic continue to be strained.

Saigon, Dec. 25.

The Chamber has voted two *douzièmes provisoires*.

There has been a serious engagement in the Orange-Transvaal. The English losses were considerable.

Saigon, Dec. 26.

The Senate has voted two *douzièmes provisoires*.

Henri Fouquier, the author, has died suddenly.

(FROM THE "N.-C. DAILY NEWS.")

THE MANCHURIAN CONVENTION.

Peking, December 16.

The Chinese newspapers seem to have concluded that H. E. Wang Wen-shao has pro-Russian proclivities, but according to my investigation this conclusion is groundless. The Peace Plenipotentiaries, Prince Ching and H. E. Wang Wen-shao, are now endeavouring to discover the views of those of the Foreign Ministers who condemn the Manchurian Convention, but it is not yet decided whether the Convention will be brought up at a conference of the Foreign Ministers.

Peking, December 17.

The Peace Plenipotentiaries, Prince Ching and H. E. Wang Wen-shao, are very busily engaged with the Manchurian question, which they intend to have settled before Their Majesties arrive at Peking, resuming the attitude originally adopted in the Spring when the objections raised by Japan obliged Russia to withdraw the Convention.

The manner of the present Russian Minister towards China is more conciliatory than that of his predecessor, but as it depends on the course taken by Japan whether Russia modifies her demands or not, it is certain that the Plenipotentiaries are relying on Japan.

THE CHINESE COURT.

Ch'ihshien, Honan, Dec. 18.

Their Majesties arrived here from Weihsifu this afternoon at 2 o'clock and will pass the night here.

(FROM "DER OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, Dec. 13.

The bill of the new tariff has been referred to a committee, the plenum of the Reichstag having debated it for nine days. It is uncertain what will be the outcome. The Agrarians demand higher protection for their products, the Bundesrath insists on its proposals.

The Argentine Government has called in sixty thousand reserves for the 1st of January. In the Republic of Chile a Cabinet crisis is reported. Both States are preparing for war. However, in Buenos Ayres hope is still sustained that the existing difficulties will be overcome in a friendly way.

Berlin, Dec. 16.

On the London exchange rates of South African Mining Shares are going up, as the end of the Transvaal war is considered imminent, after General Botha being wounded.

H. M. the Emperor has expressed to the Schantung Eisenbahn Gesellschaft (Shantung Railway Company) his congratulations on the occasion of the opening of the line from Tsingtao to Chiangling.

The Prussian Diet will be convened on the eighth of January.

Rear-Admiral Geissler has been promoted to be Vice-Admiral, at the same time his appointment to be chief of the German Squadron in East Asia being gazetted.

NEWS FROM THE SOUTH.

Hongkong, Dec. 14.

A great fire broke out in Honam, opposite Canton, on the night of the 12th instant. Eight hundred houses were destroyed, and twenty fatalities are reported.

Piracy is again rampant in the Canton delta.

LATEST SHIPPING.

Hoop Iron (¾ to 1½ inch)	5.50 to 6.00

KEROSENE.

There is no change to report in the kerosene market.

American	\$2.66
Russian	2.40
Langkat	2.35

SUGAR.

There has been a small business but transactions on any important scale may be considered at an end till after the New Year Holidays.

	PER PICUL.
Brown Takao	Y. 5.90 to 6.55
Brown Manila	6.35 to 7.30
Brown Daitong	5.80 to 6.00
Brown Canton	6.00 to 7.70
White Java and Penang	7.90 to 9.40
White Refined	9.95 to 11.70

EXPORTS.

RAW SILK.

It has been a quiet week. Prices are nominally unchanged. Neither buyers nor sellers appear eager to operate at the moment, and probably now there will be little done till after the New Year.

QUOTATIONS.

Filatures—Extra, Fine	Y. 940 to 950

Hair 55 Inches Long Grown by Cuticura.

MISS B—, of L—, sends us through our British Agents, Messrs. F. NEWBURY & SONS, 27 and 28, Charterhouse Square, London, E. C., a strand of soft, glossy hair cut from her own head and measuring fifty-five inches in length, of which the annexed drawing is a photographic fac-simile. She attributes her magnificent head of hair to frequent shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA gently rubbed into the scalp. Previous to the use of CUTICURA, her hair was dry, thin, and lifeless, and came out in handfuls to such an extent that she feared she would lose soon it.

This is but one of many remarkable cases of the preservation and restoration of the hair in seemingly hopeless cases by warm shampoos with CUTICURA SOAP, followed by light dressings of CUTICURA, purest of emollient skin cures. This treatment at once stops falling hair, clears the scalp of crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow on a clean, sweet, wholesome, healthy scalp, when all else fails.

MILLIONS OF WOMEN use CUTICURA SOAP exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, and for all the purposes of the toilet, bath, and nursery.

Complete External and Internal Treatment for Every Humour,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: R. TOWNS & CO., Sydney, N.S.W. So. African Depot: LENOX LTD., Cape Town. "All about the Skin, Scalp, and Hair," free. POTTER DRUG AND CHEM. CORP., Sole Props., CUTICURA REMEDIES, Boston, U.S.A.
